

VOLUME II

PREFACE

SECTION IX HYDRODYNAMICS

A Hybrid Integral Equation Method for Evaluating Hydrodynamic Interaction Between Several Floating Bodies in Waves 499
T. Matsui, K. Kato

Analysis of Structure – Fluid Dynamic Interaction Problems by Boundary Integral Equation Methods 515
T. Kawakami, M. Kitahara

Nonlinear Wave Transformation 525
K. Mizumura

SECTION X NONLINEAR STRUCTURAL PROBLEMS

Geometrically Nonlinear Analysis of Shallow Spherical Shell Using an Integral Equation Method 537
N. Tosaka, S. Miyake

Elastic Buckling Analysis of Assembled Plate Structures by Boundary Element Method 547
M. Tanaka, K. Miyazaki

An Alternative Boundary Element Analysis of Plates Resting on Elastic Foundation 561
N. Kamiya, Y. Sawaki

SECTION XI NONLINEAR MATERIAL PROBLEMS

Application of BEM to Calculation of the Work Roll Deformation and Residual Stress in the Rolled Sheet 573
J. Kihara, M. X. Peng

SECTION XII COMPUTATIONAL ASPECTS

An Adaptive Indirect Boundary Element Method with Applications 587
R. L. Johnston, G. Fairweather and A. Karageorghis

New Developments in the BEASY Boundary Element Analysis System 599
A. C. Mercy, S. Nageswaran and J. Trevelyan

Interactive Laplace's Equation Analyzing System ILAS 621
S. Murashima, Y. Nonaka

- A Large System BEAP-II of Boundary Element Analysis with Sparse Algorithm 631
B. Hua, Z. Mao, X. Ye, Y. Zhang, G. Luo and H. Xiong

SECTION XIII NUMERICAL AND MATHEMATICAL ASPECTS

- Mixed Methods in BEM for Elasto-Plastic Problems 641
E. Schnack

- Special Shape Functions in Boundary Integral Method 653
J.B. Sellmeijer

- A New Approach to Singular Kernel Integration for General Curved Elements 665
M. Koizumi, M. Utamura

- Application of the Cauchy Integral to the Displacement Discontinuity Method 677
J.P. Henry, A. Bouhadanne and E. Morel

- A System of Boundary Integral Equations for the Problem of Acoustic Scattering by an Absorbing Wall 687
T. Ha Duong

- On the Numerical Implementation of BEM for Axisymmetric Elasticity 695
M. Guiggiani, P. Casalini

- An Indirect Boundary Element Method in the Solution of the Diffusion Equation 707
J. Zhu

- The Usefulness and the Limit of Direct Regular Method in Boundary Element Elastostatic Analysis 715
R. Yuuki, T. Matsumoto and H. Kisu

- Stability Experiment of FDM, FEM and BEM in Convective Diffusion 725
M. Kanoh, G. Aramaki and T. Kuroki

- Boundary Element Modelling of Dilatant Interfaces 735
A.P.S. Selvadurai, M.C. Au

- Optimum Positions for the Nodes in Discontinuous Boundary Elements 751
J.M. Xu, C.A. Brebbia

SECTION XIV FLUID MECHANICS

- Three-Dimensional Analysis of Potential Flow in a Centrifugal Impeller by Panel Method 771
Y. Miyake, K. Bando, Y. Masuda and S. Nagamatsu

- Free Surface Stokes Flow Over an Obstacle 783
E.B. Hansen

- Characteristics Incorporated Boundary Element for One-Dimensional Convective Diffusion Problem 793
M. Sakakihara

- Integral Equation Analysis of Laminar Natural Convection Problems 803
N. Tosaka, N. Fukushima

- Numerical Simulations for Incompressible Viscous Flow Problems Using the Integral Equation Methods 813
N. Tosaka, K. Kakuda

The Boundary Element Spectral Method and Applications in 3-D Viscous Hydrodynamics <i>W. Borchers, F.K. Hebecker</i>	823
Vorticity – Velocity – Pressure Boundary Integral Formulation <i>P. Skerget, A. Alujevic and C.A. Brebbia</i>	829
Boundary Elements Applied to Laminar Flow in Irregular Ducts <i>L. E. Coates</i>	835
Application of Boundary Element Method in Transient Flow Problems with Moving Boundaries <i>C.S. Chang</i>	849
Numerical Simulation of Separated Flow by Discrete Vortex Method <i>T. Miyamoto, M. Hashiguchi</i>	859
Analyses of Fresh – Salt Water Interface in Coastal Aquifers <i>T. Fukuhara, T. Fukui</i>	869
Three-Dimensional Simulation of Hydro-Mass Transportation in Nearly Closed Basins <i>J. Matsunashi, T. Teratani and H. Okuda</i>	877
SECTION XV GROUNDWATER FLOW	
Computation of the Fluid Flow in Zoned Anisotropic Porous Media and Determination of the Free Surface Seepage <i>E. Bruch, S. Grilli and A. Lejeune</i>	889
EXTRA PAPER	
The Calculation of Transient Eddy Currents by Means of the Boundary Element Method <i>A. Krawczyk</i>	905
