

CONTENTS

SECTION 1 - BASIC FORMULATIONS

INVITED PAPER

- The Generalized Boundary Element Method for Nonlinear Problems 3
N. Tosaka and K. Kakuda

INVITED PAPER

- Variational Principles for Boundary Element Formulations in Structural Mechanics 19
C. Polizzotto

- A Hybrid Displacement Variational Formulation of BEM 33
T.G.B. DeFigueiredo and C.A. Brebbia

- The Hybrid Boundary Element Method in Elastostatics: Overview of the Theory and Examples 43
N.A. Dumont

INVITED PAPER

- Modern Coupling of FEM and BEM with Mixed Variational Formulations 59
E. Schnack, I. Becker and N. Karaosmanoglu

- Some Computational Aspects of the BEM Variational Formulation 75
P. D'Aguanno, T. Panzeca and M. Zito

SECTION 2 - MATHEMATICAL ASPECTS

INVITED PAPER

- The Boundary Element Method for Linear Elliptic Equations with Variable Coefficients 91
D.L. Clements

- New Expressions of the Fundamental Solution of Axisymmetric Helmholtz-Type Equations 97
M. Tsuchimoto and T. Honma

- Boundary Element Analysis System Based on a Formulation with Relative Quantity 111
H. Kisu and T. Kawahara

INVITED PAPER	
Further Applications of P-Adaptive Boundary Elements <i>M. Cerrolaza and E. Alarcon</i>	123
Lagrangian Node Generation in BEM using Half-Plane Formulation <i>Dj. Modjtahedi and M. Rahbari</i>	137
Estimates of Errors Arising in the Computation of Forces Acting on Rigid Bodies in Stokes and Potential Flows due to Variations in Geometry <i>E. Gavze</i>	147
Equations with Discontinuous Coefficients <i>F. Hartmann and P. Schoepp</i>	161
Spline Integral Equation Method for Rotating Disc of Variable Thickness <i>X-y. Liu and J-j. Zheng</i>	167
INVITED PAPER	
The Two-Dimensional Papkovitch-Neuber Formula <i>M.A. Jaswon and H. Adibi</i>	177
INVITED PAPER	
An Accuracy Postprocessor for Boundary Element Analysis <i>J.J. Rencis and K-Y. Jong</i>	187
INVITED PAPER	
The H-P Version of the Galerkin Boundary Element Method for Integral Equations on Polygons and Open Arcs <i>E.P. Stephan</i>	205
SECTION 3 - NUMERICAL ASPECTS	
INVITED PAPER	
Integration Methods for Singular Boundary Element Integrands <i>W.S. Hall</i>	219
INVITED PAPER	
Quadrature Methods for Singular and Nearly Singular Integrals in 3-D Boundary Element Method <i>K. Hayami and C.A. Brebbia</i>	237

A Flexible Quadrature Method over Cauchy Singularities in Boundary Integral Equations <i>H. Niessner</i>	265
Accurate Numerical Integration of Singular Kernels in the Two-Dimensional Boundary Element Method <i>M. Sato, S. Yoshioka, K. Tsukui and R. Yuuki</i>	279
A Numerical Integration Scheme for the Galerkin Approach in Boundary Elements <i>P. Parreira</i>	297
The Boundary Representation Angle in 2D BEM Potential Problems <i>C.F. Flood and W.S. Hall</i>	313
A Simple Procedure to Solve the Mild-Slope Equation using BEM and Perturbation Technique - Part I <i>R. Rangogni</i>	331
SECTION 4 - COMPUTATIONAL ASPECTS	
An Efficient Technique for Reducing Domain Integrals to the Boundary <i>J.P.S. Azevedo and C. A. Brebbia</i>	347
Numerical Integration for Supercomputers in Three-Dimensional Potential Problems <i>H. Tsuboi and Y. Ishii</i>	363
SECTION 5 - EDGE FUNCTION METHOD	
INVITED PAPER	
The Edge Function Method (EFM) for 2-D Regions with Arbitrary Boundaries, in Fracture Elastodynamics, Thin Plates and Laplace/Poisson Problems <i>P.M. Quinlan</i>	381
INVITED PAPER	
The Edge-Function Method for Eigenvalues and Eigenfunctions for Two-Dimensional Elastodynamics in Polygonal Regions <i>J.J. Grannell and M.J.A. O'Callaghan</i>	397

INVITED PAPER	
The Lap-Edge Method for 2-D Problems in Heat Conduction for Loaded Polygonal Regions with Circular Cavities	417
<i>B.G. Mc Enery and M.H. Quinlan</i>	
SECTION 6 - COUPLING	
INVITED PAPER	
The Coupling of BEM and FEM - A Brief Review	431
<i>G.C. Hsiao</i>	
INVITED PAPER	
Mixed Methods and the Marriage between Finite Elements and Boundary Elements	447
<i>A. Bossavit</i>	
INVITED PAPER	
BEM-FEM Coupling for Screen and Infinite Domain Potential Problems	459
<i>J.J. Grannell</i>	
A Coupled Formulation of Finite and Boundary Element Methods in Two-Dimensional Elasticity	477
<i>C.K. Choi and J.S. Ahn</i>	
INVITED PAPER	
A Combined Finite Element Boundary Element Technique for Stress Analysis	493
<i>J.L. Wearing, M.A. Sheikh and A.J. Hickson</i>	
Boundary Element and Finite Element Methods for the Coupled Fluid-Structure Interaction Problem	509
<i>S. Amini and P.J. Harris</i>	
Fluid-Structure Coupling Boundary Element Method for Analyzing Free Vibration of Axisymmetric Thick-Walled Tanks	521
<i>Y-Y. Huang, S-K. Wang and W-M. Cheng</i>	
A Combined Boundary Integral FE Method for Large Domain Problems	535
<i>D. Givoli</i>	

INVITED PAPER	
The Modelling of Highly Nonlinear Water Waves: A step toward a Numerical Wave Tank	549
<i>S.T. Grilli, J. Skourup and I.A. Svendsen</i>	

SECTION 7 - INVERSE PROBLEMS

INVITED PAPER	
Some Recent Advances in Boundary Element Research for Inverse Problems	567
<i>M. Tanaka</i>	

Shape Identification of a Free Surface with Traction of Constant Magnitude	583
<i>R.A. Meric</i>	

Source Inversion of Acoustic Emission based on the Boundary Element Formulation	593
<i>M. Ohtsu</i>	

INVITED PAPER	
Shape Optimization of Electrode and Insulator	603
<i>H. Tsuboi</i>	

SECTION 8 - RESEARCH IN PROGRESS

INVITED PAPER	
One Decade of Engineering Research on BIE-BEM in China	621
<i>Q. Du and Z. Yao</i>	

INVITED PAPER	
Boundary Element Research in Brazil	631
<i>J.A. Costa Jr.</i>
