

CONTENTS

Preface	vii
---------------	-----

INVITED LECTURES

Applications of Dynamical Systems to the Statistical Analysis of Time Series	3
<i>J. Cabrera</i>	
1. Dynamical Systems	3
1.1 Introduction	3
1.2 Some Basic Ideas on Dynamical Systems and Strange Attractor Reconstruction	6
1.3 Examples	7
2. Statistical Models	13
3. Model Selection	14
3.1 Autocorrelation Function	15
3.2 Diagnostics for Dynamical Systems	16
3.3 Criterias for Model Selection	22
4. Estimation of the Rule	23
4.1 Smooth Multiple Additive Regression Technique (<i>SMART</i>)	24
4.2 Multivariate Additive Regression Splines (<i>MARS</i>)	27
5. Dimension	32
6. Computational Methods and Graphics Interface	38
6.1 Graphics Interface	39
6.2 Implementation of the Graphics Interface	41
6.3 Computation of the Autocorrelations	43
6.4 Computation of Recurrence and Wedge Plots	43
6.5 Computations of the Rule with <i>MARS</i> and <i>SMART</i>	45
6.6 Computation of the Dimension	45
References	46
Introduction to the Theory of Computational Dynamics	49
<i>R. de la Llave</i>	
1. Introduction	49
Exercise	51
2. Reliability of Computer Exploration	52

- Exercises 53
- 3. Periodic Orbits 54
 - Exercises 57
- 4. Local Theory Near a Fixed Point 59
 - Exercises 60
- 5. Invariant Manifolds 62
- 6. Bifurcations 64
 - Exercises 66
 - References 69

Introduction to K.A.M. Theory 73

R. de la Llave

- 1. Introduction 73
- 2. Formal Considerations 74
- 3. Convergence 82
- 4. About the Nonresonance Conditions 88
- 5. A Counterexample 90
- 6. The Full K.A.M. Theorem 95
- 7. Computational Aspects 98
- References 102

Stability and Chaos in Classical and Quantum Hamiltonian Systems . . 107

H. R. Jauslin

- 1. Introduction 108
- CLASSICAL SYSTEMS
- 2. Canonical Transformations, Symplectic Structure 109
 - 2.1. Generating Functions 112
 - 2.2. The Hamilton-Jacobi Equation 114
 - 2.3. Appendix: Proof of the Equivalence of Canonical and Symplectic 115
- 3. Symplectic Integration of Hamiltonian's Equations 118
 - 3.1. Infinitesimal Generator of the Time Evolution,
First Order Algorithms 118
 - 3.2. Higher Order Algorithms 121
 - 3.3. Symplectic Algorithms with Exact Integer Arithmetics 122
- 4. Structure and Chaos in Classical Phase Space 124
 - 4.1. Poincaré Maps 124
 - 4.2. Twist Maps 125
 - 4.3. Qualitative Features of Phase Portraits 126
 - 4.4. Quasiperiodic Orbits: K.A.M. Theory 128
 - 4.5. Periodic Orbits: Birkhoff Fixed Point Theorem 132
 - 4.6. Unstable Periodic Orbits, Broken Separatrices, Chaos 134
 - 4.7. Aubry-Mather Theory 138

QUANTUM SYSTEMS

5.	Time Dependent Hamiltonians	143
5.1.	Floquet Formalism, Quasienergy Operator	146
5.2.	Point Spectrum and Stability	148
5.3.	Correlation Functions	149
6.	The Time-periodic Case	150
6.1.	Howland's Criterion	154
6.2.	Application: Quantized Fermi Acceleration	155
7.	Quasiperiodic Driving Forces	157
7.1.	Point Spectrum and Stability	159
7.2.	Continuous Spectrum, RAGE Theorem	159
7.3.	Scalar Examples with Continuous Spectrum	160
7.4.	Two-level Systems with Continuous Quasienergy Spectrum	162
8.	Stability of the Point Spectrum: KAM Techniques in Quantum Mechanics	163
8.1.	Properties of the Eigenfunctions of the Quasienergy Operator	163
8.2.	Superconvergent Perturbation Theory	165
8.3.	Sketch of the Proof	165
9.	Quantum Perturbation Theory in Differential Form: Relation with Classical Integrable Many-Particle Systems	167
	References	168

Nonequilibrium Ordering and Critical Phenomena in Lattice Systems 173

J. Marro (with A. Achahbar and J. J. Alonso)

1.	Introduction	173
2.	The Models	174
2.1.	Driven Diffusive System Near Dimension Two	176
2.2.	Generalized Reaction Diffusion Ising System	177
2.3.	A Nonequilibrium Version of the Spin Glass Problem	177
2.4.	A Probabilistic Cellular Automaton	178
3.	Nonequilibrium Phase Transitions	178
3.1.	Competition of Glauber Generators	178
3.2.	Competition of Glauber and Kawasaki Generators	180
3.3.	Kawasaki Generator with a Driving Field	182
4.	Conclusion	185
	References	186

Laplacian Growth and Diffusion Limited Aggregation 189

J. F. Fernández

1.	Growth Models, Fractals and Laplacian Growth	189
1.1.	Eden's Model	189
1.2.	Diffusion Limited Aggregation (<i>DLA</i>)	189
1.3.	Invasion Percolation	191
1.4.	Fractals	192

1.5.	Laplacian Growth	196
	Exercises	199
2.	Instabilities, Similarity, and DLA	199
2.1.	Instabilities	199
2.2.	Similarity	201
2.3.	Relation between DLA and Laplacian Growth	203
	Exercises	206
3.	Surface Tension, Porous Media, and Poisson Growth	207
3.1.	Surface Tension Effects	207
3.2.	Fluid-fluid Flow in Porous Media	209
3.3.	Poisson Growth	214
	Exercises	216
	References	217
	Glossary	218
Integral Equations for Fluids: Critical Phenomena		219
<i>L. F. Rull</i>		
1.	Introduction and Summary	219
2.	Derivation of Integral Equations	219
2.1.	Derivation of the YBG Equation	221
2.2.	The PY and HNC Equations	222
2.3.	Contents of the PY and HNC Equations	225
2.4.	The MHNC Equation	227
3.	Numerical Solutions	230
3.1.	Factorization of the OZ Equation	230
3.2.	Some Details of Methods	232
4.	Critical Behaviour	236
4.1.	Critical Exponents and Amplitudes	236
4.2.	Classical Results	238
4.3.	The YBG Equation	239
4.4.	The PY Equation	240
4.5.	The HNC Equation	241
4.6.	The RHNC Equation	242
	References	244
Modelling of Mechanical Properties of Advanced Materials		247
<i>J. L. Vallés</i>		
1.	Introduction	247
1.1.	Motivation	247
1.2.	Advanced Materials for High Temperature Applications	248
1.3.	Modelling of Mechanical Properties	249
2.	Physical Mechanisms of Deformation and Fracture	249
2.1.	Plasticity	249

2.2.	Viscoplasticity	251
2.3.	Fatigue	253
2.4.	Constitutive Equations	255
2.5.	Damage Mechanics	255
2.6.	Fracture Mechanics	256
3.	Modelling of Fatigue in Nickel-based Superalloys	257
3.1.	Deformation Mechanisms in Superalloys	257
3.2.	Viscoplastic Models	259
3.3.	Microstructural Input	260
3.4.	Damage Equation for Lifetime Prediction	261
4.	Modelling of Creep in Ceramic Matrix Composites	262
4.1.	Distinctive Properties of Ceramic Matrix Composites	262
4.2.	Macromechanistic Models	264
4.3.	Micromechanistic Models	265
	References	267

A Problem in Computational Astrophysics: Order in the Orientation of Galaxies

269

E. Battaner

1.	Warps of Spiral Galaxies	269
2.	The Individual Warp Vectors	271
3.	Least Squares Method	272
	Exercise 1	272
4.	Convergence of Planes	273
	Exercise 2	273
5.	Interpretation of the Statistical Results	273
6.	Results for Warps	275
7.	Angular Momenta	276
	References	276

On the Structure of Quasars

279

E. Pérez (with A. Robinson and L. de la Fuente)

1.	Background	279
2.	The Problem	281
3.	The Method	283
3.1.	Spherical Geometry	283
3.2.	Disk Geometry	285
3.3.	Biconical Geometry	286
4.	Discussion	287
	References	288

CONTRIBUTIONS

Simulation of Nonlinear Diffusion Processes	291
<i>J. M. López (with M. A. Rodríguez)</i>	
Multifractal Analysis of the Growth Probability Distribution in Zinc Electrodeposition	299
<i>J. Mach (with P. P. Trigueros, F. Más and F. Sagués)</i>	
Numerical Simulation of Stochastic Models for Externally-Driven Lasers . . .	309
<i>M. S. Torre (with H. F. Ranea Sandoval and R. C. Buceta)</i>	
Phase Separation in Binary Mixtures at Low Temperatures	314
<i>A. M. Lacasta (with A. Hernández-Machado, J. M. Sancho and R. Toral)</i>	
Simulation of the Time Evolution of a System Exhibiting a Vapour- Liquid Transition	321
<i>J. Güemez (with S. Velasco and J. A. White)</i>	
Ising Model with Two Temperatures: Simulation and Theory	326
<i>M.A. Muñoz (with P. L. Garrido)</i>	
Metropolis, Langevin and Hybrid Simulations of a 1-D Spinless Fermion Model	330
<i>G. Buendía</i>	
Computer Calculations in Quantum Chromodynamics	334
<i>B. Allés</i>	
Simulation of a Set of Superconducting Spheres in Metastable State in a Bidimensional Lattice	339
<i>S. Lafn (with J. G. Esteve)</i>	
Dynamical Aspects of ^3He Drop Collisions	345
<i>M. Guilleumas (with M. Barranco, M. Pi and E. Suraud)</i>	
Implementation of the Bettis Algorithms for the Numerical Integration of Perturbed Oscillating Systems	349
<i>J. Vigo (with J. M. Ferrándiz)</i>	

The Logistic Map Driven by Correlated Noise	358
<i>A. Iglesias (with J. M. Gutiérrez and M. A. Rodríguez)</i>	
Atmosphere Cooling Rate Calculation Using a Narrow-Band Model	365
<i>A. Serrano (with J. M. Montanero)</i>	
List of Participants	369
