

CONTENTS

Introduction	vii
Conference Participants	xiv

Part I. Geometric-Analytic Methods

A.Weinstein, Stability of Poisson-Hamilton equilibria	3
D.Holm, J.Marsden, T.Ratiu and A.Weinstein, Stability of rigid body motion using the energy-Casimir method	15
D.Holm, Stability of planar multifluid plasma equilibria by Arnold's method	25
A.Kaufman* and R.Dewar, Canonical derivation of the Vlasov-Coulomb noncanonical Poisson structure	51
J.Marsden, T.Ratiu and A.Weinstein, Reduction and Hamiltonian structures on duals of semidirect product Lie algebras	55
R.Montgomery, J.Marsden and T.Ratiu, Gauged Lie-Poisson structures . . .	101
J.Marsden,* P.Morrison and A.Weinstein, The Hamiltonian structure of the BBGKY hierarchy equations	115
M.Grmela, Particle and bracket formulations of kinetic equations	125
J.Marsden and P.Morrison,* Noncanonical Hamiltonian field theory and reduced MHD	133
R.Littlejohn, Geometry and guiding center motion	151
A.Kaufman* and B.Boghosian, Lie-transform derivation of the gyro- kinetic Hamiltonian system	169
M.Mayer, Poisson structures for relativistic systems	177
G.Goldin, Diffeomorphism groups, semidirect products and quantum theory.	189

Part II. Analytic and Numerical Methods

N.Zabusky, Contour dynamics for two dimensional flows	211
Y.Wan, On the nonlinear stability of circular vortex patches	215
T.Beale* and A.Majda, Vortex methods for fluid flow in two or three dimensions	221

*An asterisk indicates the author who delivered a lecture, in case of multiple authors.

P.Olver, Hamiltonian perturbation theory and water waves 231

S.Wollman, Results on existence and uniqueness of solutions to the
 Vlasov equation 251

R.Glassey and W.Strauss, Remarks on collisionless plasmas 269

H.Segur, Toward a new kinetic theory for resonant triads 281

P.Spalart, A spectral method for external viscous flows 315

R.Miller, Forecasting the ocean's weather: numerical models for
 application to oceanographic data 337

 Part III. Bifurcation and Dynamical Systems

H.Swinney, Geometry and dynamics in experiments on chaotic systems . . . 349

J.Guckenheimer, Dimension estimates for attractors 357

D.McLaughlin, J.Moloney and A.Newell,* Solitary waves as fixed
 points of infinite-dimensional maps in an optical bistable
 ring cavity 369

J.Crawford, Hopf bifurcation and the beam-plasma instability 377

P.Holmes, Some remarks on chaotic particle paths in time-periodic,
 three-dimensional swirling flows 393

E.Siggia, A universal transition from quasi-periodicity to choas 405

J.Curry* and E.Wayne, On the nonpathological behavior of Newton's
 method 407

J.Scheurle, Successive bifurcations in the interaction of steady
 state and Hopf bifurcation 419

J.Swift, Convection in a rotating fluid layer 435
