Preface	ix
Analysis of a class of problems with friction by finite element methods <i>J. T. Oden</i>	1
Finite element studies of reaction - diffusion <i>A.R. Mitchell and V.S. Manoranjan</i>	17
Finite elements for singularities in two- and three- dimensions <i>J.R. Whiteman</i>	37
A simple and accurate method for the determination of stress intensity factors and solutions for problems on domains with corners <i>H. Blum</i>	57
Some numerical test problems with singularities <i>L. Collatz</i>	65
Iterative solution of the GEM Equations <i>J.A. Hendry, L.M. Delves and J. Mohamed</i>	77
On finite elements for the electricity equation <i>A. Bossavit</i>	85
Finite element analysis of Schottky Barrier Diodes <i>J.S. Campbell and G.T. Wrixton</i>	93
A posteriori error estimates for finite element solutions of plate bending problems <i>R. Rohrbach and E. Stein</i>	101
Large deflection analysis of imperfect Mindlin plates using the modified Riks method <i>E. Hinton and C.S. Lo</i>	111
On a conforming Mindlin-type plate element <i>A Tessler</i>	119

The linear triangular bending element <i>T.J.R. Hughes and R.L. Taylor</i>	127
Finite element computation of large elastic deformations <i>I. Fried</i>	143
Optimal design of cylinders in shear <i>G. Strang and R. Kohn</i>	161
Stress formulation with augmented Lagrange method in elasto-plasticity <i>U. Schomburg</i>	173
On the finite element solution of optimal design problems using transformation techniques <i>S. Lyle and N.K. Nichols</i>	183
Analysis of eccentrically stiffened wide panels of nearly optimum design using 3D-degenerated cubic isoparametric shell elements <i>G. Ise</i>	193
A quasi viscous method for elastic and plastic post buckling analysis of plates and shells <i>B.-H. Kröplin and D. Dinkler</i>	201
On finite element discretization of a higher-order shell theory <i>T. Kant</i>	209
On the numerical analysis of thin shell problems <i>M. Bernadou</i>	219
Curved rectangular and general quadrilateral shell elements for cylindrical shells <i>A.B. Sabir and T.A. Charchafchi</i>	231
A finite element algorithm for flow in a gas centrifuge <i>J.E. Akin and M.H. Berger</i>	241
An alternating iteration scheme for certain free boundary value problems <i>J.C. Bruch, Jr., J.M. Sloss and J. Remar</i>	251
Catastrophic features of Coulomb friction <i>V. Janovský</i>	259
Numerical simulation of free boundary problems using phase field methods <i>G.J. Fix</i>	265
On the asymptotic convergence of some boundary element methods <i>W.L. Wendland</i>	281
'Hierarchical' finite element approaches, error estimates and adaptive refinement <i>O.C. Zienkiewicz, D.W. Kelly, J. Gago and I. Babuška</i>	313

A bound theorem for reduced integrated finite elements and error analysis <i>D.W. Kelly</i>	347
Finite elements and finite differences: Distinctions and similarities <i>E.R. de Arantes e Oliveira</i>	357
Analysis of discretizations by the concept of discrete regularity <i>W. Hackbusch</i>	369
The application of iterated defect correction to finite element methods <i>J. Hertling</i>	377
On the implementation of finite elements for parabolic evolution problems <i>J.P. Hennart</i>	385
A survey of the factorised formulation of the displacement method <i>V. Wilhelmy</i>	395
Optimal finite element approximation for diffusion-convection problems <i>J.W. Barrett and K.W. Morton</i>	403
Petrov-Galerkin method for hyperbolic equations <i>D.F. Griffiths</i>	411
Generalised Galerkin methods for hyperbolic equations <i>K.W. Morton and A. Stokes</i>	421
Numerical imperfections and perturbations in the approximation of nonlinear problems <i>F. Brezzi and H. Fujii</i>	431
Approximation of double bifurcation points for nonlinear eigenvalue problems <i>J. Rappaz and G. Raugel</i>	453
New results in the finite element solution of steady viscous flows <i>M.D. Gunzburger and R.A. Nicolaidis</i>	463
Characteristics and finite element methods applied to the equation of fluids <i>M. Bercovier, O. Pironneau, Y. Hasbani and E. Livne</i>	471
Quasi-Newton methods in fluid dynamics <i>M.S. Engelman</i>	479
The application of the finite element method to problems relevant to the glass making process <i>C.A. Gare, J. Ashworth, J.C. Carling, D.M. Burley H. Rawson and G.T. Vickers</i>	489

Surface representation in Computer Aided Geometric Design <i>J.A. Gregory</i>	499
Interactive generation of three-dimensional meshes <i>Y. Depeursinge, Ph. Caussignac, S. Jeandrevin and W. Voiron</i>	509
ABSTRACTS OF POSTER SESSIONS	517
1. Minimum principles for some coupled systems <i>R.T. Ackroyd</i>	517
2. The relationship between the patch test for non-conforming finite elements and the consistency of the corresponding finite difference equations <i>J.M. Aitchison</i>	517
3. A variable order global element method for non-linear parabolic P.D.E.s. <i>M. Berzins and P.M. Dew</i>	518
4. A new approach to the analysis of an extended class of linear multistep methods <i>F. Brancaloni and V. Ciampi</i>	518
5. The CAD-FEM interface <i>G.A. Butlin</i>	519
6. Upper bound plane stress limit analysis using an unconstrained minimisation method <i>J.S. Campbell, M.J. Creed and J.B. Delaney</i>	519
7. A finite element approach to solve a nonlinear hyperbolic problem <i>A. Cardillo, M. Lucchesi, A. Pagni and G. Pasquinelli</i>	520
8. An optimal mesh procedure in finite element method <i>J. Carnet, P. Ladeveze and D. Leguillon</i>	521
9. Numerical solution of nonlinear elliptic partial differential equations using the Global Element Method <i>R. Cook</i>	522
10. Fracture criterion for brittle materials based on finite statistical cells <i>H. Cords, G. Kleist, G. Kraus and R. Zimmermann</i>	522
11. Parabolic variational inequalities applied to time dependent groundwater flow with particular reference to the effect of tides on a coastal aquifer <i>A.W. Craig and W.L. Wood</i>	523
12. General solution of partial differential equations - A finite element approach <i>Z.J. Csendes and N. Nassif</i>	523

13. A new approach to the numerical analysis of linear elastic shell problems 524
Ph. Destuynder and A. Lutoborski
14. The single element integration approach to the finite element method 524
L.C.W. Dixon and D.J. Morgan
15. Optimal convergence Petrov-Galerkin methods based on quadratic elements 525
D. Duncan
16. Blending splines as a means to solve integral equations approximately 525
G. Hämmerlin
17. The penalty method applied to the non-stationary Stokes equations 526
F.-K. Hebeker
18. Errors introduced by the mapping in isoparametric finite elements 527
V. Hoppe
19. On evaluation of two thick plate theories - finite element solutions 527
T. Kant
20. A finite element method for solving the Klein-Gordon equation 528
V.S. Manoranjan
21. University Consortium for Industrial Numerical Analysis 528
S. McKee
22. The finite element method for dynamic viscoelastic analysis 528
A. Némethy
23. Finite element error estimates for some variational inequalities 528
M.A. Noor
24. Mixed finite element methods for mildly nonlinear elliptic problems 529
M.A. Noor
25. The singularity of critical ideal flow in open channels 529
M.J. O'Carroll and E.F. Toro
26. A nesting technique for efficient determination of localised stress concentrations 530
C. Patterson and N.I. Bagdatlioglu
27. A regular boundary method using non-conforming elements for stress and harmonic problems 530
C.A. Patterson and M.A. Sheikh

28. On the use of fundamental solutions in the Trefftz method for harmonic problems <i>C.A. Patterson and M.A. Sheikh</i>	530
29. On a mixed finite element method for two-dimensional elasticity equations <i>J. Pitkäranta and R. Stenborg</i>	531
30. On adaptive discretization techniques in curvilinear coordinates for convection-dominated flows <i>R. Piva, A. Di Carlo and B. Favini</i>	531
31. A three dimensional heat conduction problem, with internal discontinuity of the temperature, leading to the use of a substructuring technique <i>C. Rose</i>	532
32. Curved finite elements for conical shells <i>A.B. Sabir and J.M. Hafid</i>	533
33. The solution of viscous flow free boundary problems using the finite element method <i>C. Saxeby</i>	533
34. Design philosophy of a general purpose finite element program <i>G. Sewell</i>	533
35. Finite element computation of tissue temperature in the human torso <i>P. Smith and E.H. Twizell</i>	534
36. Features facilitating the development of the program package SITU for computer aided design purposes <i>H. Tängfors, K. Runesson and N.-E. Wiberg</i>	534
37. Curved finite element mesh verification <i>R. Wait and N.G. Brown</i>	535
38. A comparison between methods of substructuring <i>C. Wielgosz</i>	535
39. The treatment of the singularity at the crest in the integral equation solution of limiting gravity waves in water <i>J.M. Williams</i>	536
Subject Index	537
