

C O N T E N T S

Preface	vii
List of Participants	ix

I. Conditioning, dichotomy and related numerical considerations

ROBERT D. RUSSELL	
A unified view of some recent developments in the numerical solution of BVODEs	1
FRANK DE HOOG and ROBERT M. MATTHEIJ	
The role of conditioning in shooting techniques	21
ROBERT M. MATTHEIJ and FRANK DE HOOG	
On non-invertible boundary value problems	55
PAUL VAN LOON	
Riccati transformations: When and how to use?	77
ROLAND ENGLAND and ROBERT M. MATTHEIJ	
Discretizations with dichotomic stability for two-point boundary value problems	91

II. Implementation aspects of various methods

WAYNE ENRIGHT	
Improving the performance of numerical methods for two-point boundary value problems	107
FRED KROGH, J.P. KEENER and WAYNE ENRIGHT	
Reducing the number of variational equations in the implementation of multiple shooting	121
ANATOL SLEPTSOV	
The spline-collocation and the spline-Galerkin methods for Orr-Sommerfeld problem	137

III. Singular perturbation ('stiff') problems

ROBERT E. O'MALLEY	
On the simultaneous use of asymptotic and numerical methods to solve nonlinear two-points problems with boundary and interior layers	149

URI ASCHER		
Two families of symmetric difference schemes for singular perturbation problems	173	
DAVID L. BROWN		
A numerical method for singular perturbation problems with turning points	193	
MAXIMILIAN R. MAIER		
Numerical solution of singular perturbed boundary value problems using a collocation method with tension splines	207	
 <u>IV. Bifurcation problems and delay differential equations</u>		
GEORG BADER		
Solving boundary value problems for functional differential equations by collocation	227	
ANDREAS GRIEWANK and GEORGE W. REDDIEN		
The approximation of simple singularities	245	
RUEDIGER SEYDEL		
Calculating the loss of stability by transient methods, with application to parabolic partial differential equations	261	
ALFREDO BELLEN		
A Runge-Kutta-Nystrom method for delay differential equations	271	
 <u>V. Special applications</u>		
PETER A. MARKOWICH		
A finite difference method for the basic stationary semiconductor device equations	285	
MITCH D. SMOOKE, JAMES A. MILLER and ROBERT J. KEE		
Solution of premixed and counterflow diffusion flame problems by adaptive boundary value methods	303
