Table of contents

1 *Transient and dynamic analysis: Theory and applications*

Transient analysis – Some recent developments 3
O.C.Zienkiewicz

Control of transient dynamic response of structures 9
P.E.O'Donoghue & S.N.Atluri

Modelling of hydrostatic loading and stability for coupled fluid-structure problems 21
P.G.Bergan & K.M.Mathisen

Stable semi-explicit procedure for time integration of nonlinear first order initial value problems 35
J.Kujawski & R.H.Gallagher

Simplified variational principles – An inadequate theoretical concept resulting in inadequate finite element methods 39
H.A.Mang, G.Hofstetter & R.H.Gallagher

An efficient higher order algorithm for nonlinear transient dynamic analysis 51
J.Kujawski & R.H.Gallagher

A simple rigid body algorithm for structural dynamics programs – Part I 59
D.J.Benson & J.O.Hallquist

Variational analysis of a slender fluid-structure system: The elasto-acoustic beam 73
R.Ohayon

Use of trigonometric functions for hierarchical improvement of finite element solutions of 2D-static elastic problems 77
N.-E.Wiberg, P.Möller & A.Samuelsson

Numerical prediction of secondary flow in rotating cylindrical ducts 87
C.Taylor, J.Rance & J.O.Medwell

Penalty and augmented Lagrangian formulations for contact problems 97
P.Wriggers, J.C.Simo & R.L.Taylor

Automatic remeshing technique in quasi-static and dynamic crack propagation 107
S.Valliappan & V.Murti

Transmitting boundaries in Time domain for 2-D nonlinear analysis of deep underground structures 117
H.J.Alheid, W.Sarfeld, A.Honecker & H.Zimmer

'Extended' variational formulations and finite element models for the elastohydrodynamic lubrication problem 129
S.Alliney, A.Strozzi & A.Tralli

Finite element adaptive mesh algorithms for moving interface problems 139
D.J.Auld & G.P.Steven

Free and forced vibration of rectangular plates by a new finite difference method 147
M.C.Bhattacharya

A new numerical method for simulation of plane or axisymmetric flows of incompressible fluids 155
J.R.Clermont & M.E.De La Lande

Three non-linear diffusion equations of sub-surface mechanics 161
J.D.Coleman

Numerical simulation of turbulent reacting flows 167
Lawrence D.Cloutman

Seismic response of liquid sloshing in the annular region formed by coaxial circular cylinders 175
K.Fujita, T.Ito & K.Okada

Lagrangian finite element methods for simulation of flow of Newtonian and non-Newtonian fluids 187
Ole Hassager, Poul Bach & Christian Bisgaard

The analysis of flow induced vibrations using combined fluid and structural finite element models 191
D.Hitchings & S.R.Gossain

Continuity of the system at the boundary in dynamic analysis 203
V.H.Joshi & J.J.Emery

A general family of single-step methods for numerical time integration of structural dynamic equations 213
Michael G.Katona

A solution of structural random response applied to cylindrical shells in a turbulent flow 227
V.Kuželka

More efficient implicit box-lambda scheme for non-isentropic flows 235
Vinicio Magi & Gaetano Vacca

A solution method for elastoplastic structures under dynamic agencies 243
C.Polizzotto

An application of the concept of an increasing series of macromodels (ISM) to the mechanics of large discrete non-linear systems 253
W.Przybyło

A method of spectral analysis, applied to periodic and pseudo periodic signals – Applications to some hydrodynamic problems 263
D.R.Rajaona & P.Sulmont

Numerical analysis of the seismic response – A state space approach 273
J.Rodellar & A.H.Barbat

Digital control of structures subjected to seismic actions 281
J.Rodellar & A.H.Barbat

Numerical algorithms for the explicit shock treatment of shock to detonation transition in heterogeneous solid high explosives 291
J.Starkenberg

New algorithm for the reduction of matrix profile 293
T.Taniguchi

2 *Constitutive equations for engineering materials*

A strain-hardening concentrated plasticity model for nonlinear dynamic analysis of steel buildings 305
Said I.Hilmy & John F.Abel

A discussion of stress rates and their application in finite strain plasticity 315
P.Pegon, J.P.Halleux & J.Donéa

The thickness effects of the CT and CCT specimens 327
Kenji Machida, Masanori Kikuchi & Hiroshi Miyamoto

Aspects on numerical techniques in small deformation plasticity 337
K.Runesson & A.Samuelsson

Constitutive equations for soil: How complicated need they be? 349
I.M.Smith

Influence of anisotropy on the deformation behavior of cohesive soils 359
A.Anandarajah

On the large deformation of axisymetric bodies: Experimental and numerical studies 367
L.Belkhiri, R.Charlier & J.M.Detraux

Finite element analysis of the behaviour and failure of elasto-viscoplastic structures 375
A.Benallal

On numerical prediction of concrete fracture localization 385
N.Bićanić, E.Pramono, S.Sture & K.J.Willam

Calibration of an elastic-visco-plastic constitutive equation for steels in the hot-rolling condition 393
S.Cescotto, H.Gröber & C.Perdrix

Influence of material behaviour on stress redistribution in cyclic plasticity 401
J.L.Chaboche & G.Cailletaud

A new implicit time integration scheme for inelastic constitutive equations with internal state variables 411
D.Cordts & F.G.Kollmann

Structural analysis of degenerating framework models for the numerical simulation of material behaviour 417
Rolf Diekkämper

Influence of stress path on saturated Hostun sand 429
T.Doanh & M.Mohkam

Material constants and mechanical behaviour during plastic wave propagation 437
E.El-Magd, W.Abdel-Ghany & M.Homayun

Stress-strain relation of 304 stainless steel for cyclic loading 447
H.Ishikawa & H.Lippmann

A Markov model of particulate material with anisotropic fabrics 455
Ryosuke Kitamura

Homogenization of cyclic loading on viscoplastic offshore foundations 465
E.Kodaissi, D.Aubry & Y.Meimon

A constitutive model for dense sand considering the effect of stress-path 475
R.Kuberan, A.Varadarajan & K.G.Sharma

Some results from rapid loading tests on a sand 485
S.R.Ledbetter

A stress-strain curve for both hardening and softening 489
F.Molenkamp

Intrinsic constitutive equations for the large deformation analysis of elastic-plastic thin shells 497
K.N.Morman, Jr., S.C.Tang & M.D.Mathers

Presentation of a non linear incremental model and its introduction in a finite element program 509
I.Shahrour & J.C.Robinet

An experimental investigation into the forms and parameters of a progressive fracturing model for brittle rocks 517
Vassiliki G.Stavropoulou

Finite element simulation of ice crystal growth in subcooled sodium-chloride solutions 527
John M.Sullivan, Jr., Daniel R.Lynch & Kevin O'Neill

Numerical methods in Limit Analysis for anisotropic materials 533
S.Turgeman, J.Pastor & J.P.Boehler

Theory of Gvozjev and macroscopic glide systems 543
Zhao Zu-wu

Late paper

Application of cyclic viscoplasticity theory to low-cycle fatigue life prediction of Ti-6Al-4V 1053
S.S.Chiu, J.Eftis & D.L.Jones
