

## Table of contents

### 3 Numerical techniques for engineering analysis and design

A formulation of general shell elements – The use of mixed interpolation of tensorial components <i>Klaus-Jürgen Bathe &amp; Eduardo N.Dvorkin</i>	551
Some recent research on numerical techniques for structural analysis <i>M.A.Crisfield</i>	565
Elasto-viscoplastic analysis of anisotropic laminated plates and shells <i>D.R.J.Owen &amp; Guo Qiang Liu</i>	577
Bending and membrane elements for analysis of thick and thin shells <i>R.L.Taylor &amp; J.C.Simo</i>	587
Application of variable metric methods to structural synthesis <i>Garret N.Vanderplaats &amp; Hiroyuki Sugimoto</i>	593
The influence of warping constraints on the nonlinear load carrying capacity of spatially loaded beam-systems <i>V.Schrödter &amp; W.Wunderlich</i>	601
Mixed finite-element methods for computing groundwater velocities <i>M.B.Allen, R.E.Ewing &amp; J.V.Koebe</i>	609
Application of the boundary integral equation method to some axisymmetric and three-dimensional pressure vessel problems <i>A.A.Bakr, M.J.Abdul-Mihsein &amp; R.T.Fenner</i>	615
An efficient solution procedure in mixed finite element analysis <i>M.Berković &amp; Z.Drašković</i>	625
Some problems of analysis of nonlinear elasto-plastic structures <i>Maciej P.Bieniek, Lembit M.Kutt &amp; Christopher M.Piaszczyk</i>	635
Dynamic analysis of stone block systems <i>C.Biasi &amp; P.Spinelli</i>	645
Study of the dynamical behaviour of immersed cables <i>P.L.Bourget &amp; D.Marichal</i>	653
Reliability and optimization of non linear finite element analyses <i>P.Bussy, G.Coffignal &amp; P.Ladeveze</i>	659
Numerical studies of the combustion process in a four-stroke internal combustion engine <i>M.H.Carpenter &amp; J.I.Ramos</i>	669
Finite element analysis of a buried reinforced concrete pipe under internal pressure <i>F.Damjanić</i>	679
A plane strain thermo-mechanical finite element model for residual stress determination during welding and annealing <i>B.K.Dutta</i>	687

Reliability-based optimization of redundant structures: A sensitivity analysis <i>Dan M. Frangopol</i>	693
An improved Lagrangian 9-node Mindlin plate element <i>H.C. Huang &amp; E. Hinton</i>	707
Effect of sequence of pretensioning in cable roofs <i>J.K. Jain, Prem Krishna, P.N. Godbole &amp; P.C. Jain</i>	715
An efficient unified post-processing approach based on a probabilistic concept <i>J.Jirousek, A.Bouberguig &amp; F.Frey</i>	723
Nonlinear finite element analysis of concrete structures: A model based on fundamental material properties <i>Michael D. Kotsovos, Milija N. Pavlović &amp; Sati Arnaout</i>	733
Quasi viscous analysis and arc-length-method – A comparison <i>B.-H. Kroeplin &amp; D. Dinkler</i>	743
Mapped infinite elements in the analysis of geomechanical problems <i>Pavao Marović &amp; Frano Damjanić</i>	749
Transient stability of steel piles during driving <i>R.E. Melchers &amp; R.C. Cugley</i>	755
Reliability analysis of multi-member structures <i>R.E. Melchers &amp; L.K. Tang</i>	763
Soil-structure interaction for unilateral contact conditions <i>E.N. Mitsopoulos &amp; P.K. Papadopoulos</i>	773
A new approach to numerical modelling of precast shear wall systems <i>G.C. Nayak, S.C. Chakrabarti &amp; D.K. Paul</i>	781
Numerical analysis of flexible retaining walls <i>J.W. Pappin, B. Simpson, P.J. Felton &amp; C. Raison</i>	789
Fracture location and its direction using nonlinear stress analysis <i>K.V. Patel</i>	803
Elasto-plastic behaviour and seismic analysis of reinforced concrete walls by FEM <i>V.F. Poterasu &amp; Nick N. Mihalache</i>	809
Non-linear transient heat transfer calculations within a general purpose finite element code FINEL <i>A.G. Prassas &amp; D. Hitchings</i>	815
Using a boundary element technique for postprocessing discontinuous finite element results <i>Byron Protopsaltis &amp; Heinrich Werner</i>	825
Rational foundation design in soil-structure interaction problems <i>W.Pytel</i>	833
Simulation of temperature distribution in drum brakes – Comparison with measurements <i>V.T. V.S. Ramachandra Rao, H. Ramasubramanian &amp; K.N. Seetharamu</i>	841
A mathematical model for the stiffness of fixed joints between machine parts <i>S.N. Shoukry</i>	851
The use of fracture mechanics in fatigue dominated fitness for purpose assessments <i>A.P. Smith &amp; P.J. Tubby</i>	859
Ultimate load analysis of folded plate structures with large elastoplastic deformations – Theoretical and practical comparisons of different FE-algorithms <i>E. Stein, K.H. Lambertz &amp; L. Plank</i>	865
Elastic large deflection analysis of ring-stiffened circular plates using graded finite-differences <i>G.J. Turvey &amp; N.G. V. Der Avanessian</i>	875
The form finding and analysis of cable nets, tents and air-supported structures <i>C.J.K. Williams</i>	885
The theoretical basis of the discrete element method <i>J.R. Williams, G. Hocking &amp; G.G.W. Mustoe</i>	897

Finite element analysis of couple-stress problems <i>R.D.Wood &amp; H.L.Jayasekera</i>	907
A work control method for geometrically nonlinear analysis <i>Yeong-Bin Yang &amp; William McGuire</i>	913
Finite element analysis of the roll coating operation <i>Y.L.Yeow</i>	923
Finite element multigrid algorithms and their application to engineering problems <i>J.Z.Zhu &amp; A.W.Craig</i>	927
 <b>4 Application of microcomputers and work stations in numerical methods</b>	
Interactive-adaptive nonlinear dynamic analysis of three-dimensional steel frames <i>Said I.Hilmy &amp; John F.Abel</i>	935
Microcomputer applications of weighted residual methods in the numerical solution of nonlinear problems <i>G.Baker</i>	945
A microcomputer application in pre and post-processing techniques for structural analysis programs <i>A.Borri, R.Crescioli &amp; A.Vignoli</i>	957
A microcomputer based technique for the analysis of orthotropic thin plates <i>P.J.Christensen &amp; P.C.M.Lau</i>	965
The numerical solution of non-linear parabolic equations on parallel computers by group explicit methods <i>D.J.Evans</i>	973
Computer aided turbomachinery design <i>A.Garon &amp; R.Camarero</i>	981
Finite element methods on supercomputers: The scatter-problem <i>R.Löhner &amp; K.Morgan</i>	987
A general data and graphics generator <i>R.J.Marsh</i>	991
Flow development from stagnation point to similarity I: Direct Formal Integration (DFI) of Prandtl's equation <i>Fred R.Payne &amp; Ramakrishna Mokkapati</i>	999
Relational data bases in computer aided design of technical systems <i>W.Przybyło</i>	1011
Buckling and vibration of ring-stiffened cones via a microcomputer <i>C.T.F.Ross</i>	1021
Architecture of an adaptive and interactive FEM-program for CAD-purposes <i>H.Tägnfors</i>	1029
The use of powerful graphics workstations for the display of numerical simulations of transient fluid flow <i>P.Townsend &amp; R.M.Botting</i>	1039
Three dimensional stability analysis for rock slopes <i>Xiang Jiannan</i>	1043
 <i>Late paper to 'Constitutive equations for engineering materials'</i>	
Application of cyclic viscoplasticity theory to low-cycle fatigue life prediction of Ti-6Al-4V <i>S.S.Chiu, J.Eftis &amp; D.L.Jones</i>	1053
