PREFACE

Page No.

SECTION 1 NON-LINEAR SOLUTION TECHNIQUES

T.K. HELLEN and W.S. BLACKBURN 3
Non-linear fracture mechanics and finite elements

B. KRÖPLIN and D. DINKLER 41
Global constraints applied to static instability analysis

A. CAUVIN 61
Nonlinear analysis of coupled shear walls in tall buildings

GIANFRANCO VALENTE 75
Wind effect on hanging roof with stiffening beams

K. RUNESSON, L. BERNSPÅNG and K. MATTIASSON 89
Implicit integration in plasticity

C. LICHT and P. SUQUET
Augmented Lagrangian method applied to a problem of incompressible viscoplasticity arising in homogenization 106

M.S.J. HASHMI, R. CRAMPTON and M.I. PANWHER 115
Plasto-hydrodynamic tube sinking: Experimental evidence and numerical solution

R.A.F. MARTINS, M. HELENA F. BARROS and LUCIA M.J.S. DINIS 130
Non-associated plasticity - A symmetric algorithm for implicit solutions

BRATISLAV KARADZIC 140
Effect of connections upon the plastic hinges forming in steel structures

Page No.

C. GONZALEZ NICIEZA, C. MORENO GONZALEZ, J.A. HUIDOBRO ROJO and J.B. ORDIERES MERE 152
An iterative numerical algorithm in plasticity

P. AGATONOVIC and D. SYGULLA 165
The use of an improved creep law for pipe components

C. KANJERIC and S. RANKOVIC 179
Elastic stability and second order theory plane frame with non-prismatic members

STANKO BRCIC 193
Longitudinal load analysis of transmission power lines - computer implementation

C. MACCONE 203
Eigenfunction expansion of the non-linear time-dependent Brownian motion

L. SOPTA 227
Splines with good curvature profiles

D.J. EVANS 235
The factorisation of banded circulant matrices into cyclic matrices

J. CALDWELL 253
Application of cubic splines to the Non-linear Burgers' equation

RANDJELOVIC M. DRAGAN and PETROVIC TOMA 262
The useing one method of the decompose on quadrature formula for solving partial equation $Au+\partial u/\partial t=f$

J.M.A. CESAR DE SA and D.R.J. OWEN 268
The imposition of the incompressible constraint in finite elements - A review of approaches with a new insight to the locking phenomenon

SECTION 2 GEOMETRICALLY NON-LINEAR PROBLEMS

MIODRAG SEKULOVIC and DRAGAN MILASINOVIC 289
Geometric nonlinear analysis of folded plate structures by the finite strip method

G. BELINGARDI and M. ROSSETO 299
Large deflection analysis of a leaf spring - A particular case

Page No.

Gj. KOKALANOV and S. ATANASOVSKI 310
Geometry and material non-linearity in the analysis of prestressed elements

## SECTION 3 REINFORCED CONCRETE STRUCTURES

M. CERVERA, E. HINTON and O. HASSAN 323
Recent developments in the nonlinear analysis of reinforced concrete structures using three dimensional finite element models

G. HOFSTETTER and H.A. MANG 344
Nonlinear finite element analysis of prestressed concrete shells

NIELS SAABYE OTTOSEN and OLA DAHLBLOM 363
Smeared crack analysis using a nonlinear fracture model for concrete

PETER FAJFAR, MATEJ FISCHINGER and CRTOMIR REMEC 377
Non-linear analysis of a RC building subjected to earthquake loading

## SECTION 4 PLASTICITY/ STRUCTURES

L.-P. NOLTE and J. CHROSCIELEWSKI 391
Large rotation elastic-plastic analysis of flexible shells

M. ABOUAF, H.J. BRAUDEL and J.L. CHENOT 405
An implicit and incrementally objective finite element formulation for isotropic generalized standard materials at finite strain. Application to metal forming

R.C. BARROS 419
Elasto-plastic buckling analysis of end-restrained spatial tubular beam-columns

DJORDJE VUKSANOVIC and BRANISLAV PUJEVIC 432
Nonlinear finite element analysis of Y-joint in welded pipe systems

Page No.

G. RADENKOVIC and S. VUKELIC 443
An approximate plastic criterion for analysis of three-dimensional beam structures

B. STOK 457
The solution of elasto-plastic torsion problem by boundary element method

ZELJKO SOMODJI 471
Numerical analysis of the elastic-plastic buckling of bar with initial imperfections

E. MASSONI, M. BELLET, M. ABOUAF and J.L. CHENOT 480
Large displacements numerical calculation of 3-dimensional elasto-plastic and elasto-viscoplastic membrane by the finite element method

J.C. GELIN 494
Application of implicit methods for the analysis of damage with temperature effects in large strain plasticity problems

## SECTION 5
## NON-LINEAR FINITE ELEMENT ANALYSIS OF STRUCTURES RECENT APPLICATIONS

M. TALBOT and G. DHATT 509
New shell elements for the analysis of pre- and post-buckling problems

J.F. STELZER 522
Consideration of non-linearities in the context with finite element analysis of temperature fields

S. BABA and N. NAKADA 536
Time dependent deformation of steel structure in fire

SEYED A. CHINI and AMDE M. WOLDE-TINSAE 550
Nonlinear finite element analysis of buckling and postbuckling behavior of prestressed domes

A. BENALLAL, J. FLOREZ and G. GEYMONAT 564
A two-field finite element formulation in continuum damage mechanics

Page No.

A.M. POCESKI 578
On the coupled action of the vertical and horizontal forces on frames

N. KOUTSABELOULIS and D.V. GRIFFITHS 592
Accelerators for non-linear problems using the finite element method

AGIC ANTE 603
Thermomechanical analysis of solid propellant grains

SECTION 6 TRANSIENT DYNAMICS

F.G. RAMMERSTORFER and W. AULI 615
Computation of the stability of dynamically loaded non-linear structures

M.S.J. HASHMI and S.K. GHOSH 638
A numerical solution for the repeated impact of short metal cylinders

LUIGI CAPPELLARI 650
On the study of mass isostatic nonlinear systems subjected to dynamic actions without solution of equilibrium equations

E.E. INAN 665
Torsional and longitudinal wave propagation in a hyperelastic cylindrical bar

ALVARO L.G.A. COUTINHO, LUIZ LANDAU, EDISON C.P. DE LIMA and NELSON F.F. EBECKEN 678
A comparison of algorithms for dynamic nonlinear interaction of elastic plates on discrete supports

SECTION 7 POTENTIAL AND VISCOUS FLOW

JOHN C. BRUCH JR. and MOHAMMAD DORMIANI 693
Free boundary fluid flow problems solved numerically in a hodograph plane using a fixed domain method

FRED R. PAYNE 727
Direct, formal integration (DFI): Numerics for Fluid mechanics

Page No.

F. ELIE, A. RANDRIAMAMPIANINA, P. BONTOUX, G.P. EXTREMET and B. ROUX 738
Numerical modelling of physical vapour transport in rectangular enclosures

R.S. HIRSH, H.-C. KU and T.D. TAYLOR 754
A time-dependent, primitive-variable, pseudospectral method that exactly satisfies the incompressibility constraint

O.R. SØRENSON and J. REFFSTRUP 766
Simulation of generalized Newtonian flow using finite element method with an improved iterative procedure

M.G. TIMOL, V. SIROHI and N.L. KALTHIA 784
On the axiysmmetrical and two-dimensional jet of an incompressible pseudo-plastic fluids

P. BOURGIN, J.M. FRANCOIS and B. GAY 798
Numerical solution of a non-Newtonian fluid film flow

L.R.T. GARDNER and G.A. GARDNER 811
A locally one dimensional space-time finite element method

A.R. BESTMAN 825
Transient effect on flow of a radiating rarefied gas between coaxial cylinders

P. SKERGET, A. ALUJEVIC and C.A. BREBBIA 834
Nonlinear fluid problems by boundary elements

M.A. LESCHZINER 847
Finite-volume computation of recirculating flow with Reynolds-stress turbulence closures

N. TOY and K. AINKARAN 869
A numerical study of two dimensional separated and reattached flows

ALFRED C. BUCKINGHAM 883
Direct computation of wall bounded aerosol turbulent flow interactions

W.M. THEODOSSIOU and A.C.M. SOUSA 897
Fluid flow predictions in regions with arbitrarily orientated obstacles using a multilevel method

CHUN-YUAN GU and LASZLO FUCHS 910
Computation of transonic flows on zonal-grids

Page No.

E. CARNEVALE and G. BIDINI 923
A new numerical approach for solving nonlinear flow equations

## SECTION 8 HEAT TRANSFER

M.S. VRHOVAC and N.H. AFGAN 937
A finite element model for heat conduction and thermoelastic stresses in screen tubes

E. BON, L. NIGRO and C. SAMPIETRI 951
Numerical solution of thermal processes with state or phase change: The computer code ATEN-2D.*

R. OHAYON 964
Non linear variational formulations for finite element analysis of conduction-radiation type problems. A review synthesis

BENGT SUNDEN 966
Combined forced and free convection flow adjacent to a non-isothermal vertical surface taking wall conduction into account

R.R. CHAMBERLAIN 982
The role of iteration in the solution of the compressible boundary layer equations

B. BOU-SAID 993
Thermohydrodynamic lubrication analysis by finite element method

J.R. RIZNIC, M.V. JOSIPOVIC and Z.V. STOSIC 1007
An iterative numerical method for non-equilibrium two-phase flow

Z. ZVIZDIC 1018
Calculation of buoyancy-drive fluid flow and heat transfer between non-isothermal vertical walls

A. BOZDOGAN 1026
An approach for determination of non-linear model parameters for forced convection heat transfer

R. SARUNAC 1035
Non-linear heat and mass transfer of composite device of oil-immersed self-cooled power transformers using general network model

Page No.

V.K. GARG and P.K. MAJI 1048
Laminar flow and heat transfer in a curved channel

## SECTION 9 GEOTECHNICAL PROBLEMS

Ph.d. E. PAVLOVEC 1063
Isolated pile under horizontal loading in an elasto-plastic media

DAN STEMATIU and RADU POPESCU 1075
Solution technique for nonlinear analysis of consolidation of clay core embankment dams

A. MIKELIC and Z. TUTEK 1090
Determination of relative permeabilities by optimal control

P. BONTOUX, C. SMUTEK, B. ROUX, G.P. EXTREMET 1102
G.H. SCHIROKY, A.C. HURFORD and F. ROSENBERGER
Finite difference solutions for three dimensional buoyancy flows in inclined cylinder

## SECTION 10 SPECIALIST APPLICATIONS

J.M.M.C. MARQUES 1117
Nonlinear finite element solutions with quasi- and Secant-Newton methods

V. JOVIĆ, M.J. NEEDS, J.B. WADDELL, C. TAYLOR, 1148
K. BOARD and M.J. COOKE
Numerical modelling of local oxidation of silicon using the finite element method

Ph. RAVIER, P. GENDRE and M. HITTINGER 1173
BACCHUS -A general multi-purpose software for non-linear diffusion-type problems in industrial context

N.K. UZUNOGLU, C.N. CAPSALIS, 1182
D. FRANTZESKAKIS and C. CHRONOPOULOS
Propagation of electromagnetic waves in non-linear dispersive media and in optical fibers

Page No.

K. HANHIROVA, E-M. SALONEN and S.M. RASANEN 1192
Calibration of the five-hole pitot tube

J.A. TOMAS 1205
Application of a general purpose non-linear code (ABAQUS) to the solution of contact problems in mechanical engineering practice

Z. STIH, Z. HAZNADAR and M. SINDLER 1216
The evaluation of simulated magnetic sources of inhomogeneous bodies

Y.Y. AZMY and J.J. DORNING 1222
Bifurcations, unfoldings and critical Rayleigh number in the Benard problem

A. MIHANOVIC and F. DAMJANIC 1238
Numerical analysis of nonlinear dynamic response of reinforced concrete structures

J. RADNIC, F. DAMJANIC and D.K. PAUL 1247
Nonlinear dynamic analysis of concrete gravity dams including hydrodynamic interaction

A. MUNJIZA and A. MIHANOVIC 1255
Limit analysis of thin steel plates

PAVAO MAROVIC and FRANO B. DAMJANIC 1263
Mapped infinite elements in non-linear stress analysis with special respect to gravity loading

J.A. FIGUEIRAS 1276
Design of RC shells by using a finite element nonlinear model
