

CONTENTS

PREFACE

Decomposition Methods in Scientific Computing: Application to Fluid Calculations	1
<i>Roland Glowinski, University of Houston, USA and INRIA, France J. Periaux, AMD/BA, France</i>	
Graphics for Numerics, Numerics for Graphics	17
<i>John F Abel and Michael F Cohen, Cornell University, USA</i>	
MATHEMATICS	
Additive m-step Preconditioners	33
<i>Loyce M Adams, University of Washington, USA</i>	
Collocation Methods for Integral Equations on Polygons	43
<i>Martin Costabel, Technische Hochschule Darmstadt, West Germany and Ernst P Stephan, Georgia Institute of Technology, USA</i>	
Symbolic Precedures for Evaluating Discretization Methods: Progress and Potential	51
<i>K C Park and D L Flagg, Lockheed Palo Alto Research Laboratory, USA</i>	
Asymptotic Error Estimates for the Combined Boundary and Finite Element Method	55
<i>W L Wendland, Technische Hochschule Darmstadt, West Germany</i>	
Refinement for Approximate Bases of Invariant Subspaces	71
<i>Mario Ahues and Veronica Celis, Universidad de Chile, Chile</i>	
Techniques for Handling Finite-Element like Models with Stochastic Boundary Conditions	77
<i>R R Dickinson, G J Savage, T E Unny and T Prasad, University of Waterloo, Canada</i>	
A Hybrid Method for an Exterior Boundary Value Problem Based on Asymptotic Expansion, Boundary Integral Equation and Finite Element Approximations	83
<i>G C Hsiao and J F Porter, University of Delaware, USA</i>	
Boundary Methods for Solving Elliptic Problems with Singularities and Interfaces	89
<i>Zi-Cai Li and Rudolf Mathon, University of Toronto, Canada</i>	
Nonconforming Combined Method of Ritz-Galerkin and Finite Element Methods	93
<i>Zi-Cai Li, University of Toronto, Canada</i>	
Multigrid Preconditioners applied to the Iterative Solution of Singularly Perturbed Elliptic Boundary Value Problems and Scattering Problems	97
<i>Charles I. Goldstein, Brookhaven National Laboratory, USA</i>	
A Direct Minimization Approach for Coupling Finite and Boundary Element Models	103
<i>Manohar P Kamat, School of ESM - Georgia Institute of Technology, USA</i>	
Criteria for Combining Inverse and Rayleigh Quotient Iteration to Solve $Ax = \lambda Bx$	109
<i>Daniel B Szyld, Duke University, USA</i>	
Solution of the Nonlinear Helmholtz Equation by the Boundary Integral Method	115
<i>V Kadambi and B Dorri, General Electric Company, New York, USA</i>	
Implementation of Parallel Numerical Algorithms on an Experimental M.I.M.D. System	121
<i>P Leca, Office National d'Etudes et de Recherches Aerospatiales, France</i>	
Some Boundary Element Methods with Nonsmooth Boundary Data	129
<i>J Saranen, University of Oulu, Finland</i>	
Ensemble De Recherche Evolutif Pour les Algorithmes a Strategie MAF de Reduction du Profil des Matrices Creuses	135
<i>L Marro, Dept Informatique Aerospatiale, France</i>	
Approximation of Nonlinear Eigenvalue Problems Associated with Elliptic Variational Inequalities by Continuation Methods	145
<i>Francis Conrad, Ecole des Mines, France and Raphael Herbin, E.N.T.P.E., France</i>	
Raffinement d'Elements Propres Approches de Grandes Matrices	153
<i>V Mardones and M Teliás, University of Chile, Chile</i>	
A Conservative Finite Element Method for Continuously Deforming Meshes	159
<i>Jozef Gosicik, Technical University of Bialystok, Poland</i>	
Estimation of Parameters in Models involving Partial Differential Equations with unknown Boundary Conditions	165
<i>V G Dovi, Universita de Genova, Italy and H Preisig, Texas A&M University, USA</i>	

FLUIDS

Finite Element Techniques for Reservoir Simulation <i>Richard E Ewing and Joseph V Koebbe, University of Wyoming, USA</i>	173
An Iterative Method for Finite Element Fluid Flow Simulation <i>Michel Fortin, Universite Laval, Canada</i>	187
Review of the Source Panel Technique for Flow Computation <i>John L Hess, Douglas Aircraft Company, McDonnell Douglas Corporation</i>	197
Numerical Solutions of Steady Incompressible Viscous Flow Problems by the Integral Equation Method <i>N Tosaka and K Kakuda, Nihon University, Japan</i>	211
On Analysis of a Class of Computational Fluid Dynamics Algorithms <i>A J Baker, University of Tennessee, USA</i>	223
A Spectral Element Method for the Simulation of Unsteady Incompressible Flows with Heat Transfer <i>George E Karniadakis and Anthony T Patera, Massachusetts Institute of Technology, USA</i>	231
Two Dimensional Hydrodynamics Calculations with a Lattice Gas <i>D d'Humieres, Y Pomeau and P Lallemand, Ecole Normale Supérieure, Paris, France</i>	241
Some Aspects of the Symmetrization of the Contained Compressible-Fluid Vibration Eigenproblem <i>Carlos A Felippa, Lockheed Palo Alto Research Laboratory, USA</i>	249
The Application of a Boundary Element Method to Complex Flows in Bifurcating Channels <i>D M Audet, P L-F Liu and W L Olbricht, Cornell University, USA</i>	255
Treatment of Free Boundaries in Numerical Computations of Long Gravity Wave Problems <i>T S Murty, Institute of Ocean Sciences, Canada and M I El-Sabh, Université du Québec à Rimouski, Canada</i>	261
Boundary Element Analysis of Thermal Fluid Flow Using $\Psi\omega$ <i>Kazuei Onishi, Fukuoka University, Japan</i>	269
Boundary Integral Method for Transonic Flows <i>Zuosheng Yang, Nanjing Aeronautical Institute, China and J C Wu, Georgia Institute of Technology, USA</i>	275
Generalized Convective Schemes <i>S Q Lu, Nanjing Aeronautical Institute, China and J C Wu and C Wang, Georgia Institute of Technology, USA</i>	283
Implementation of Kutta Condition for a Finite Element Formulation of Euler Equations <i>H U Akay and A Ecer, Purdue University at Indianapolis, USA</i>	291
Numerical Simulation of Viscous Flows Using Particle Methods <i>J P Choquin, C.M.A.P. Ecole Polytechnique, France and S Huberson L.I.M.S.I./C.N.R.S., France</i>	297
Some Remarks on Turbulence Modelling for Large Eddy Simulations <i>O Pironneau, University of Paris and INRIA, France</i>	303
On a New Boundary Element Spectral Method <i>F K Hebeker, Universität Paderborn, West Germany</i>	311
Multi-Domains and Multi-Solvers Finite Element Approach for The Stokes Problem <i>J Cahouet and J P Chabard, Laboratoire National d'Hydraulique, France</i>	317
Implicit High-order Upwind Finite Element Schemes for the Euler Equations <i>J Periaux, B Stoufflet, INRIA Sophia-Antipolis, Valbonne, France F Fezoui, A Dervieux, AMD-BA, Saint-Cloud, France</i>	323
Hydrodynamic Bearings with Arbitrary Geometry of Oil Pockets by Integral Equation <i>J H Spurk and H Stephan, Technische Hochschule Darmstadt, West Germany</i>	331
A Discontinuous Finite Element Method for Nonlinear Hyperbolic Equations <i>G Chavent, Université Paris, France, B Cockburn, The University of Chicago, USA and G Cohen and J Jaffre of INRIA, France</i>	337
Coordination by Partition in Sub-Domains and Spectral Methods <i>Y Marion, Laboratoire de Mécanique des Fluides, France and B Gay, Université Claude Bernard, France</i>	343

SOLID MECHANICS

- A Boundary Element Method for Three-Dimensional Crack Problems** 351
Ernst P Stephan, Georgia Institute of Technology and Martin Costabel, Technische Hochschule Darmstadt, West Germany
- Dynamic Analysis of Inhomogeneous Anisotropic Bodies by Integral Equation Method** 361
Y Niwa and S Hirose of Kyoto University, Japan and M Kitahara of Tokai University Japan
- Transient Analysis in Three-Dimensional Elastodynamics** 367
K Nakagawa of Fuyo Data Processing and Systems Developments, Japan and M Kitahara, Tokai University, Japan
- A Boundary Element Method in the Transient Elastodynamic Problem** 379
J T Wang and C X Xiao, Institute of Rock and Soil Mechanics, China
- 3-D Vibration Isolation using Open Trenches** 385
B Dasgupta, I G Vardoulakis, University of Minnesota, USA and D E Beskos, University of Patras, Greece
- A Numerical Analysis of the Deformation in Rigid-plastic Body with use of Flow Functions** 393
J Kihara and S Nomura, University of Tokyo, Japan
- Coupled Torsional and Extensional Waves in Mooney-Rivlin Materials** 399
N S Abhyankar and S V Hanagud, Georgia Institute of Technology, USA
- Time Marching Analysis of Boundary Integral Equations in Two Dimensional Elastodynamics** 405
Takuo Fukui, Fukui University, Japan
- Some Results in Two and Three Dimensional Singular Finite Elements with Applications to Fracture Mechanics** 411
Francisco Michavila and Luis Gavete, Polytechnical University, Madrid, Spain
- Homogenization of the Fatigue Behaviour in Single Crystals** 417
Dominique Leguillon, CNRS Laboratoire de Mecanique Theorique, France
- Simulation of Fatigue Crack Propagation Under Variable Amplitude Loading** 423
A Bia, C Robin and G Pluvinage, Universite de Metz, France and M Afzali, Centre Technique des Industries Mechaniques, France
- Local Behaviour of an Elastic Composite Near a Free Boundary** 429
Helene Dumontet, CNRS Universite P et M Curie, France
- Free Boundary Value Problems in Elastostatics** 435
Eckart Schnack, Karlsruhe University, Germany
- Une Methode de Resolution d'un Probleme de Contact Unilateral Avec Frottement** 441
Laurent Jeannin, Ecole Centrale de Lyon, France
- Error Control and Self Adaptive Meshes in Elastoplasticity** 447
G Coffignal, P Ladeveze and P Rougeot, L M T University of Paris, France
- Homogenization Computations in the Elastic or Plastic Collapse Range. Applications to Unidirectional Composites and Perforated Sheets.** 453
Olivier Debordes, Laboratoire de Mecanique et d'Acoustique CNRS, France
- Boundary Element Solution of Elastodynamics Problems using a New Technique** 459
C A Brebbia, Computational Mechanics Institute, Southampton, United Kingdom

STRUCTURES

- Structural System Identification and Predictions of Response to Time Dependent Loads** 473
K A Kline and D M Ciarelli, Wayne State University, USA and M Riesner and P Surulinarayanawami of Ford Motor Company, USA
- Non-linear Thermo-Mechanical Behaviour of Shell Structures** 485
M B Hsu, MARC Analysis Research Corporation, USA
- Non-Linear Large Deformation of High-Speed Metal Forming** 491
K Hanasaki and Y Fujinaka, Kyoto University, Japan, H Osaka, Kumamoto Institute of Technology, Japan and M Fujita of Kumamoto University, Japan
- Random Response of Discretized Plates to Parametric and Non-Parametric Nonstationary Random Excitations** 499
C W S To and I R Orisamololu, University of Calgary, Canada

Rigid-Plastic Finite Element Analysis using Penalty Iteration Method <i>Tatsuhiko Aizawa, and Junji Kihara, University of Tokyo, Japan</i>	507
Integrated Process and Structural Optimization for Face Milling Systems <i>S J Lee, General Electric Company, New York, S G Kapoor, University of Illinois at Urbana-Champaign, USA</i>	513
An Algorithm for Minimum Weight Design of Steel Plate Girders <i>S Abuyounes and H Adeli, The Ohio State University, USA</i>	519
Calcul des Valeurs et Vecteurs. propres de Structures Amorties par Optimisation non-lineaire <i>B Marcos, University of Sherbrooke, Canada, J G Beliveau, University of Vermont, USA</i>	525
Transient Response of a Beam to a moving mass using a Finite Element Approach <i>Arturo O Cifuentes and David N Herting, The Macneal-Schwendler Corporation, USA</i>	533
Restructuring of Numerical Algorithms for Active Control of Dynamic Systems <i>A M Reinhorn, G D Manolis and T T Soong, State University of New York, Buffalo, USA</i>	541
Temporal Finite Elements for Nonlinear Truss Analysis <i>S Gellin, Bell Aerospace, Buffalo, USA and J M Pitarresi, State University of New York, Buffalo, USA</i>	547
A Symbolic Analysis of C^1 and C^0 Beam Discretizations of the Arch <i>D L Flaggs and K C Park, Lockheed Palo Alto Research Laboratory, USA</i>	553
Robot - The Efficient Static Structural Analysis Program with Dynamic Data Handling on the Low Cost Personal Computer <i>A Niznik, M Lorrain, Laboratoire de Genie Civil INSA - UPS., France</i>	561
Evaluation and Comparison of Parallel Algorithms in Structural Optimization <i>Ph Berger, M Dayde, E N S E E I H T and J C Dunyach, Aerospatiale, France</i>	567
A Graph Theoretical Approach for an Efficient Flexibility Analysis of Structures <i>A Kaveh, Technische Universitat Wien, Austria</i>	573
On Solution Symmetry for Axisymmetric Deformation of Axially Compressed Cylindrical Shell <i>V M Kornev, S N Korobeinikov, Lavrentyev Institute of Hydrodynamics, USSR</i>	579
On the Approximation of Thin Shells by "B-Spline and Finite Element" Methods <i>M Bernadou, B Lalanne, INRIA and Bureau d'Etudes TURBOMECA, France</i>	585
A Mixed Method for Two-Dimensional Harmonic Problems with Applications to Torsion <i>E Ramahefarison and G Verchery, Ecole des Mines de Saint-Etienne, France</i>	593
Two New Discrete Kirchhoff Plate Shell Elements <i>G Dhatt, Laval University and UTC, France, L Marcotte, Y Matte and M Talbot, Laval University, Canada</i>	599
SOIL-STRUCTURE/FLUID STRUCTURE, ACOUSTICS	
A Response Computation Technique for Offshore Platform Subjected to a Class of Non-Normal Stochastic Loading <i>H B Kanegaonkar and A Haldar, Georgia Institute of Technology, USA</i>	607
Three-Dimensional Dynamic Analysis of Soil-Structure Interactions by Boundary Integral Equation-Finite Element Combined Method <i>S Kobayashi and K Mori, Kyoto University, Japan</i>	613
Boundary Integral Solutions for Non-Linear Forces on Objects Beneath Waves <i>Ai-li Ting and Philip L-F Liu, Cornell University, USA</i>	619
"Finite Wave Element" Algorithm for Rapid Elasto-Acoustic Wavefield Computations <i>G J Tango and M F Werby, NORDA NSTL, USA, H Schmidt, SACLANT ASW Research Centre, NATO, USA and K Davies, Georgia Institute of Technology, USA</i>	627
Inverse Scattering From Penetrable Objects <i>V M Ayres and G C Gaunard of Naval Surface Weapons Centre, USA and K Davey, Georgia Institute of Technology, USA</i>	635
Analysis of Scattering from Arbitrary Bodies using Extended Field Techniques <i>K R Davey, Georgia Institute of Technology, USA and M F Werby and G J Tango Naval Ocean Research and Development Activity, USA</i>	643
The Use of Null Field Integral Techniques in Transient Field Problems <i>Hsiu Han and Kent Davey, Georgia Institute of Technology, USA</i>	651

Optimization of a Coupled Fluid-Structure Problem for Maximum Difference Between Adjacent Coupled Eigenfrequencies	657
<i>A C Deneuvy, Ecole Centrale de Lyon, France</i>	
Second Order Absorbing Boundary Conditions for the Wave Equation: A Solution for the Corner Problem	665
<i>Alain Bamberger, Ecole Polytechnique, France, Patrick Joly and Jean E Roberts INRIA, France</i>	

CHEMICAL ENGINEERING/ENERGY

A Model for Numerical Study of a Chemically-Reactive Turbulent Flow	673
<i>T-H J Hsieh and E E O'Brien, State University of New York, Stony Brook, USA</i>	

Finite Strain Elastic Plastic Deformation of Polymers	679
<i>Bharat S Bagepalli, General Electric Corporate Research and Development, USA</i>	

An Optimization Method for Energy Strategy Problems	687
<i>J Teghem Jr, Faculte Polytechnique de Mons, Belgium, and P L Kunsch, Belgonucleaire, Belgium</i>	

THERMO/FEM MECHANICS, COMPUTER SCIENCE

Improved Approximate Methods for Analyzing Steady Heat Conduction	695
<i>Charles W Bert, University of Oklahoma, USA</i>	

Multitasking on the Cray X-MP 48 Multiprocessor with an Application to Seismic Migration	701
<i>O d'Aboville and O Berger, E N S E E I H T/I N P France and M Verprat ELF AQUITAINE/D I S PAU, France</i>	

CA.ST.OR: Finite Elements and Boundary Elements System	707
<i>M Afzali and P Devalan, CETIM, France</i>	

The Solution of Boundary Value Problems in Technical Geometrics	713
<i>E Halter, Kfk/IDT, Karlsruhe, West Germany</i>	

Interactive Method to Solve the 3D Maxwell's Equations	719
<i>B Veyron, Institut de Physique Nucleaire, Universite Lyon, France</i>	

Modulef: An Open Finite Element Library	725
<i>M Bernadou, A Hassim, P Laug, D Steer, M Vidrascu and E Saltel, INRIA, France</i>
