

CONTENTS

PART I. LINEAR ALGEBRA

I.1	SOME RECENT ADVANCES IN NUMERICAL LINEAR ALGEBRA by J. H. Wilkinson	3
1.	Introduction	3
2.	Elementary Matrices	4
3.	Elementary Orthogonal Matrices	7
4.	Square-Root-Free Givens Transformations	10
5.	Error Analysis of Square-Root-Free Givens	15
6.	Singular Value Decomposition	18
7.	Application of SVD	27
8.	Inverse Iteration	31
9.	Newton's Method and Inverse Iteration	38
10.	Crawford's Method	41
11.	The QZ Algorithm	43
12.	Solution of Linear Equations Over an Integral Domain	48
13.	General Comments	51
	References	51
I.2	MODIFICATION OF MATRIX FACTORIZATIONS AFTER A RANK-ONE CHANGE by P. E. Gill and W. Murray	55
1.	Introduction	55
2.	The LDL^T Factorization	56
3.	Special Symmetric Modifications	63
4.	Updating the LQ Factorization	66
5.	Special Rank-One Changes to LQ	70
6.	Updating the LU Factorization	75
7.	Further Comments	79
8.	Concluding Remarks	81
	References	82
I.3	SPARSE MATRICES by J. K. Reid	85
1.	Introduction	85
2.	Direct Solution of Linear Sets of Equations	91
3.	Direct Solution of Finite Element and Finite Difference Equations	110

4.	Iterative Methods	121
5.	Least Squares Problems	125
6.	The Eigenvalue Problem	130
	References	140
PART II. ERROR ANALYSIS		
II.1	ERROR ANALYSIS by C. G. Broyden	149
1.	Introduction	149
2.	Linear Equations	157
3.	Linear Programming	166
4.	Matrix Eigenvalues	170
	References	176
II.2	METHODS OF SIGNIFICANCE ARITHMETIC by N. Metropolis	179
1.	Introduction	179
2.	Non-Integral Values of Significance and the Rôle of Variance	180
3.	Rules for Variances	182
4.	Two Representations	183
5.	Variance and Significant Digits	184
6.	Error Correlation	186
7.	Method of Reduced Precision	187
8.	Two Preliminary Studies	189
	References	192
II.3	INTERVAL-ANALYSIS by Karl Nickel	193
1.	Historic Remarks	193
2.	Introduction	194
3.	Round-off Errors and Round-off Intervals	198
4.	Data Errors and Data Intervals	206
5.	Conclusion	221
	References	222
PART III. OPTIMIZATION AND NON-LINEAR SYSTEMS		
III.1	UNCONSTRAINED MINIMIZATION by K. W. Brodlie	229
1.	Introduction	229
2.	Second Derivative Methods	231
3.	Quasi-Newton Methods - Original Conception	237
4.	Quasi-Newton Methods - Modern Implementations	241
5.	Quasi-Newton Methods - Convergence	247
6.	Quasi-Newton Methods - New Ideas	249
7.	Conjugate Gradient Methods	256
8.	Methods which do not Require Derivatives	259
9.	Conclusions	262
	References	263

III.2	NON-LINEAR LEAST SQUARES AND EQUATIONS by J. E. Dennis, Jnr.	269
	1. Introduction	269
	2. The Problems	270
	3. Structure in the Least Squares Gradient	272
	4. Structure in the Least Squares Hessian	275
	5. The Levenberg-Marquardt Method	277
	6. Use of the Singular Value Decomposition	282
	7. Limitations of the Gauss-Newton Methods	284
	8. Robust Loss Functions	287
	9. The Generalized Levenberg-Marquardt Method	290
	10. Iteratively Re-weighted Least Squares	293
	11. More Structure in the Hessian	296
	12. Structure in the Residuals	298
	13. Solving $\tilde{F}(\tilde{x}) = \tilde{Q}$	300
	14. Concluding Remarks	305
	References	306
III.3	LINEARLY-CONSTRAINED PROBLEMS INCLUDING LINEAR AND QUADRATIC PROGRAMMING by P. E. Gill and W. Murray	313
	1. Introduction	313
	2. Quadratic Programming: The Positive- Definite Case	316
	3. Positive-Definite QP: Method of Solution	318
	4. Positive-Definite QP: The Numerical Implementation	320
	5. Positive-Definite QP: Algorithmic Refinements	332
	6. Indefinite Quadratic Programming	335
	7. Quadratic Programming Subject to Upper and Lower Bounds	341
	8. Linear Least Squares Subject to Linear Constraints	343
	9. The General Linearly-Constrained Problem	344
	10. Lagrange-Multiplier Estimates	348
	11. Linear Programming - Background	352
	12. Linear Programming - Recent Developments	355
	13. Conclusions	358
	References	359
III.4	METHODS FOR SOLVING NON-LINEARLY CONSTRAINED OPTIMIZATION PROBLEMS by R. Fletcher	365
	1. Introduction	365
	2. Theoretical Developments	368
	3. Direct Methods	373

4.	Barrier and Penalty Functions	381
5.	Methods which Solve Linear Constraint Subproblems	396
	References	404
III.5	INTEGER PROGRAMMING by E. M. L. Beale	409
1.	Introduction	409
2.	Branch and Bound Methods	411
3.	Special Ordered Sets	427
4.	The Feasibility of Integer Programming	437
5.	Other Approaches	440
6.	Conclusion	445
	References	445
PART IV.	ORDINARY DIFFERENTIAL EQUATIONS AND QUADRATURE	
IV.1	THE INITIAL VALUE PROBLEM FOR ORDINARY DIFFERENTIAL EQUATIONS by J. D. Lambert	451
1.	Introduction	451
2.	Basic Classes of Methods	453
3.	Convergence Theory	456
4.	Stability for Fixed Steplength	459
5.	PC Algorithms: Choice of P , C and Mode	463
6.	Variable-Step Variable-Order (VSVO) Algorithms	465
7.	Extrapolation Methods: The GBS Method	474
8.	Comparing Methods for Non-Stiff Systems	477
9.	Advances in the Theory of RK Methods	480
10.	Stiff Systems	481
11.	A New Approach to Global Error Estimation	489
	References	491
IV.2	BOUNDARY-VALUE PROBLEMS IN ORDINARY DIFFERENTIAL EQUATIONS by J. Walsh	501
1.	Introduction	501
2.	Methods of Local Approximation	504
3.	Non-Local Approximation and Collocation	514
4.	Shooting Methods for Linear Equations	518
5.	Shooting for Non-Linear Equations	523
	References	531
IV.3	QUID, QUO, QUADRATURE? by J. N. Lyness	535
1.	Introduction	535
2.	Background	536
3.	The Automatic Quadrature Routine	538
4.	Multidimensional Quadrature	549
5.	Concluding Remarks	558
	References	559

PART V. APPROXIMATION THEORY

V.1	NUMERICAL METHODS FOR FITTING FUNCTIONS OF TWO VARIABLES by M. J. D. Powell	563
1.	Introduction	563
2.	Product Methods	568
3.	Adaptive Methods Based on Point Function Values	585
4.	The Degree of Difficulty of the Two Variable Problem	593
	References	603
V.2	RECENT RESULTS IN APPROXIMATION THEORY by D. Kershaw	605
1.	Introduction	605
2.	Analytic Methods	606
3.	Semi-Analytic Methods	608
4.	Asymptotic Expansions	611
5.	Linear Approximation	613
6.	Non-Linear Approximation	617
7.	Splines	619
	References	620
V.3	A SURVEY OF NUMERICAL METHODS FOR DATA AND FUNCTION APPROXIMATION by M. G. Cox	627
1.	Introduction	627
2.	Preliminaries	629
3.	Methods Based on Interpolation	634
4.	Methods Based on the Least-Squares Norm	645
5.	Approximation in Other Norms	653
6.	Miscellany	656
7.	Future Work	662
	References	663

PART VI. PARABOLIC AND HYPERBOLIC PROBLEMS

VI.1	FINITE ELEMENT METHODS IN TIME DEPENDENT PROBLEMS by A. R. Mitchell	671
1.	Finite Elements in Space and Time	672
2.	Semi-Discrete Galerkin Methods	676
3.	Continuous Methods in Time (Linear Parabolic Problems)	679
4.	Finite Difference Methods in Time	680
5.	Finite Element Methods in Time	681
6.	Alternating Direction Galerkin (A.D.G.) Methods	684
7.	Convergence Estimates for Galerkin Methods	685
8.	Least Squares Methods in Space	691
	References	692

VI.2	INITIAL-VALUE PROBLEMS BY FINITE DIFFERENCE AND OTHER METHODS by K. W. Morton	699
1.	Introduction	699
2.	Stability Theory for Initial Boundary Value Problems	701
3.	Developments in Methods	717
4.	Analysis of Convergence and Accuracy References	740 745
VI.3	SPLITTING METHODS FOR TIME DEPENDENT PARTIAL DIFFERENTIAL EQUATIONS by A. R. Gourlay	757
1.	Introduction	757
2.	In the Beginning	758
3.	The Construction of Splitting Schemes	761
4.	Constructions Based on Strang's Theory	768
5.	Wave-like Problems	770
6.	General Splitting	773
7.	Hopscotch	777
8.	More than Two Space Dimensions	780
9.	Splitting and the Galerkin Method	783
10.	Conclusions References	791 791
PART VII.	ELLIPTIC PROBLEMS AND INTEGRAL EQUATIONS	
VII.1	FINITE DIFFERENCE METHODS FOR ELLIPTIC BOUNDARY- VALUE PROBLEMS by L. Fox	799
1.	Introduction	799
2.	Economic Direct Solution of Finite- Difference Equations	800
3.	Shooting Methods	807
4.	Direct Methods for Separable Equations	809
5.	Classical Iterative Methods	819
6.	Strongly Implicit Iteration	835
7.	Other Factorization Methods	845
8.	Fiddling with the Grid	849
9.	Deferred Approach and Deferred Correction	852
10.	Non-linear Equations	856
11.	Error Estimates, Singularities	859
12.	Conclusion	865
13.	Notes Added in Proof References	868 870
VII.2	FINITE ELEMENT METHODS FOR ELLIPTIC PROBLEMS by R. Wait	883
1.	Introduction	883
2.	Variational Methods	885

3.	Finite Element Approximations	890
4.	Orders of Convergence	904
	References	912
VII.3	THE NUMERICAL SOLUTION OF INTEGRAL EQUATIONS	
	by Ben Noble	915
1.	Introduction	915
2.	Linear Fredholm Integral Equations of the Second Kind	917
3.	Smoothness, Error Control and Related Practical Aspects	922
4.	Degenerate Kernel, Galerkin, Projection and Related Methods	929
5.	The Numerical Calculation of Eigenvalues and Eigenvectors	935
6.	First-kind Fredholm Equations	937
7.	Cauchy Principal Value Equations	942
8.	Non-linear Fredholm Integral Equations	944
9.	Further Remarks on Error Analysis	946
10.	Volterra Integral Equations	949
11.	A Non-linear Integrodifferential Volterra Fredholm Equation	953
12.	The Numerical Solution of Field Problems via Integral Equations	955
13.	Remarks on Automatic Computer Programs	957
	References	959
