<i>Preface</i>	xii
<i>List of Computer Programs</i>	xv
1 PRELIMINARIES	1
1.0 Introduction	1
1.1 Program Organization and Control Structures	4
1.2 Error, Accuracy, and Stability	15
2 SOLUTION OF LINEAR ALGEBRAIC EQUATIONS	19
2.0 Introduction	19
2.1 Gauss-Jordan Elimination	24
2.2 Gaussian Elimination with Backsubstitution	29
2.3 <i>LU</i> Decomposition	31
2.4 Inverse of a Matrix	38
2.5 Determinant of a Matrix	39
2.6 Tridiagonal Systems of Equations	40
2.7 Iterative Improvement of a Solution to Linear Equations	41
2.8 Vandermonde Matrices and Toeplitz Matrices	43
2.9 Singular Value Decomposition	52
2.10 Sparse Linear Systems	64
2.11 Is Matrix Inversion an N^3 Process?	74
3 INTERPOLATION AND EXTRAPOLATION	77
3.0 Introduction	77
3.1 Polynomial Interpolation and Extrapolation	80
3.2 Rational Function Interpolation and Extrapolation	83
3.3 Cubic Spline Interpolation	86
3.4 How to Search an Ordered Table	89
3.5 Coefficients of the Interpolating Polynomial	92
3.6 Interpolation in Two or More Dimensions	95
4 INTEGRATION OF FUNCTIONS	102
4.0 Introduction	102
4.1 Classical Formulas for Equally-Spaced Abscissas	103
4.2 Elementary Algorithms	110
4.3 Romberg Integration	114
4.4 Improper Integrals	115
4.5 Gaussian Quadratures	121
4.6 Multidimensional Integrals	126

5	<i>EVALUATION OF FUNCTIONS</i>	131
5.0	Introduction	131
5.1	Series and Their Convergence	132
5.2	Evaluation of Continued Fractions	135
5.3	Polynomials and Rational Functions	137
5.4	Recurrence Relations and Clenshaw's Recurrence Formula	141
5.5	Quadratic and Cubic Equations	145
5.6	Chebyshev Approximation	147
5.7	Derivatives or Integrals of a Chebyshev-approximated Function	151
5.8	Polynomial Approximation from Chebyshev Coefficients	153
6	<i>SPECIAL FUNCTIONS</i>	155
6.0	Introduction	155
6.1	Gamma Function, Beta Function, Factorials, and Binomial Coefficients	156
6.2	Incomplete Gamma Function, Error Function, Chi-Square Probability Function, Cumulative Poisson Function	160
6.3	Incomplete Beta Function, Student's Distribution, <i>F</i> -Distribution, Cumulative Binomial Distribution	166
6.4	Bessel Functions of Integer Order	170
6.5	Modified Bessel Functions of Integer Order	176
6.6	Spherical Harmonics	180
6.7	Elliptic Integrals and Jacobian Elliptic Functions	183
7	<i>RANDOM NUMBERS</i>	191
7.0	Introduction	191
7.1	Uniform Deviates	192
7.2	Transformation Method: Exponential and Normal Deviates	200
7.3	Rejection Method: Gamma, Poisson, Binomial Deviates	203
7.4	Generation of Random Bits	209
7.5	The Data Encryption Standard	214
7.6	Monte Carlo Integration	221
8	<i>SORTING</i>	226
8.0	Introduction	226
8.1	Straight Insertion and Shell's Method	227
8.2	Heapsort	229
8.3	Indexing and Ranking	232
8.4	Quicksort	235
8.5	Determination of Equivalence Classes	237
9	<i>ROOT FINDING AND NONLINEAR SETS OF EQUATIONS</i>	240
9.0	Introduction	240
9.1	Bracketing and Bisection	243
9.2	Secant Method and False Position Method	248

9.3 Van Wijngaarden–Dekker–Brent Method	251	
9.4 Newton-Raphson Method Using Derivative	254	
9.5 Roots of Polynomials	259	
9.6 Newton-Raphson Method for Nonlinear Systems of Equations		269
10 MINIMIZATION OR MAXIMIZATION OF FUNCTIONS		274
10.0 Introduction	274	
10.1 Golden Section Search in One Dimension	277	
10.2 Parabolic Interpolation and Brent's Method in One Dimension		283
10.3 One-Dimensional Search with First Derivatives	286	
10.4 Downhill Simplex Method in Multidimensions	289	
10.5 Direction Set (Powell's) Methods in Multidimensions		294
10.6 Conjugate Gradient Methods in Multidimensions	301	
10.7 Variable Metric Methods in Multidimensions	307	
10.8 Linear Programming and the Simplex Method	312	
10.9 Combinatorial Minimization: Method of Simulated Annealing		326
11 EIGENSYSTEMS		335
11.0 Introduction	335	
11.1 Jacobi Transformations of a Symmetric Matrix	342	
11.2 Reduction of a Symmetric Matrix to Tridiagonal Form: Givens and Householder Reductions		349
11.3 Eigenvalues and Eigenvectors of a Tridiagonal Matrix		356
11.4 Hermitian Matrices	364	
11.5 Reduction of a General Matrix to Hessenberg Form	365	
11.6 The QR Algorithm for Real Hessenberg Matrices	369	
11.7 Improving Eigenvalues and/or Finding Eigenvectors by Inverse Iteration	377	
12 FOURIER TRANSFORM SPECTRAL METHODS		381
12.0 Introduction	381	
12.1 Fourier Transform of Discretely Sampled Data	386	
12.2 Fast Fourier Transform (FFT)	390	
12.3 FFT of Real Functions, Sine and Cosine Transforms		397
12.4 Convolution and Deconvolution Using the FFT	407	
12.5 Correlation and Autocorrelation Using the FFT	415	
12.6 Optimal (Wiener) Filtering with the FFT	417	
12.7 Power Spectrum Estimation Using the FFT	420	
12.8 Power Spectrum Estimation by the Maximum Entropy (All Poles) Method	430	
12.9 Digital Filtering in the Time Domain	436	
12.10 Linear Prediction and Linear Predictive Coding		444
12.11 FFT in Two or More Dimensions	449	

13	<i>STATISTICAL DESCRIPTION OF DATA</i>	454
13.0	Introduction	454
13.1	Moments of a Distribution: Mean, Variance, Skewness, and so forth	455
13.2	Efficient Search for the Median	459
13.3	Estimation of the Mode for Continuous Data	462
13.4	Do Two Distributions Have the Same Means or Variances?	464
13.5	Are Two Distributions Different?	469
13.6	Contingency Table Analysis of Two Distributions	476
13.7	Linear Correlation	484
13.8	Nonparametric or Rank Correlation	488
13.9	Smoothing of Data	495
14	<i>MODELING OF DATA</i>	498
14.0	Introduction	498
14.1	Least Squares as a Maximum Likelihood Estimator	499
14.2	Fitting Data to a Straight Line	504
14.3	General Linear Least Squares	509
14.4	Nonlinear Models	521
14.5	Confidence Limits on Estimated Model Parameters	529
14.6	Robust Estimation	539
15	<i>INTEGRATION OF ORDINARY DIFFERENTIAL EQUATIONS</i>	547
15.0	Introduction	547
15.1	Runge-Kutta Method	550
15.2	Adaptive Stepsize Control for Runge-Kutta	554
15.3	Modified Midpoint Method	560
15.4	Richardson Extrapolation and the Bulirsch-Stoer Method	563
15.5	Predictor-Corrector Methods	569
15.6	Stiff Sets of Equations	572
16	<i>TWO POINT BOUNDARY VALUE PROBLEMS</i>	578
16.0	Introduction	578
16.1	The Shooting Method	582
16.2	Shooting to a Fitting Point	586
16.3	Relaxation Methods	588
16.4	A Worked Example: Spheroidal Harmonics	600
16.5	Automated Allocation of Mesh Points	608
16.6	Handling Internal Boundary Conditions or Singular Points	611
17	<i>PARTIAL DIFFERENTIAL EQUATIONS</i>	615
17.0	Introduction	615
17.1	Flux-Conservative Initial Value Problems	623
17.2	Diffusive Initial Value Problems	635
17.3	Initial Value Problems in Multidimensions	642

17.4 Fourier and Cyclic Reduction Methods for Boundary Value Problems	646	
17.5 Relaxation Methods for Boundary Value Problems		652
17.6 Operator Splitting Methods and ADI	660	
<i>References</i>		668
<i>Numerical Recipes in Pascal</i>		673
Introduction	673	
Chapter 1: Preliminaries	681	
Chapter 2: Solution of Linear Algebraic Equations		682
Chapter 3: Interpolation and Extrapolation	690	
Chapter 4: Integration of Functions	696	
Chapter 5: Evaluation of Functions	701	
Chapter 6: Special Functions	704	
Chapter 7: Random Numbers	714	
Chapter 8: Sorting	723	
Chapter 9: Root Finding and Nonlinear Sets of Equations		728
Chapter 10: Minimization or Maximization of Functions		736
Chapter 11: Eigensystems	748	
Chapter 12: Fourier Transform Spectral Methods	754	
Chapter 13: Statistical Description of Data	761	
Chapter 14: Modeling of Data	771	
Chapter 15: Integration of Ordinary Differential Equations		777
Chapter 16: Two Point Boundary Value Problems	783	
Chapter 17: Partial Differential Equations	788	
<i>Table of Program Dependencies</i>		791
<i>Index</i>		797
