Contents

Preface v

Chapter 1 Introduction and Background Theory

1.1 Introduction 1
1.2 Statistical Analysis of Time Series 2
1.3 Basic Theory of Stationary Time Series 3
1.4 Linear Representations for Stationary Processes 9

Chapter 2 Review of Linear Models

2.1 Model Building in Time Series Analysis 13
2.2 AR, MA, and ARMA Models 16
2.3 State Space Representations 18
2.4 Linear Models and Stationarity 22

Chapter 3 General Non-linear Models

3.1 Volterra Series Expansions 25
3.2 Polyspectra 31
3.2.1 Estimation of Polyspectra 33
3.3 Estimation of Generalized Transfer Functions 38
3.4 Tests for Gaussianity and Linearity 42
3.4.1 Some Numerical Examples 48

Chapter 4 Some Special Non-linear Models

4.1 Bilinear Models 51
4.2 Threshold Autoregressive Models 73
4.3 Exponential Autoregressive Models 83

Chapter 5 General State-dependent Models

5.1 Construction of State-dependent Models 92
5.2 Identification of SDMs 99
5.3 Numerical Examples of State-dependent Model Fitting 113
5.4 SDM Schemes for Non-linear Systems 132

Chapter 6 Non-stationary Processes

6.1 Types of Non-stationary Processes 140
6.2 The Notion of Time-dependent Spectra 141
6.3 Evolutionary Spectra 145
6.3.1 Evolutionary Cross-spectra 153
6.4 Other Definitions of Time-dependent "Spectra" 158
6.5 Some Applications of Evolutionary Spectral Analysis 162
6.6 Test for Stationarity 174

Chapter 7 Prediction, Filtering, and Control of Non-stationary Processes

7.1 Review of Prediction Theory for Stationary Processes 185
7.2 The Prediction of Non-stationary Processes 195
7.2.1 The Time Domain Approach 200
7.2.2 The Frequency-domain Approach 205
7.3 Filtering of Non-stationary Processes 211
7.4 Minimum Variance Control of Systems Infected by Non-stationary Disturbances 218

Appendix The Sunspot Data and the Canadian Lynx Data 223
