Contributors . . . . .	v
Editor's Foreword . . . . .	vii
Cornelius Lanczos – A Biographical Note . . . . .	ix
List of Publications by Cornelius Lanczos . . . . .	xii
<b>Table-making at the National Bureau of Standards—GERTRUDE BLANCH and IDA RHODES . . . . .</b>	
<b>1</b>	<b>1</b>
<b>Vignette of a Cultural Episode—WILHELM MAGNUS . . . . .</b>	
<b>7</b>	<b>7</b>
<b>The Physicist as Poet—JANICE BIRELINE . . . . .</b>	
<b>15</b>	<b>15</b>
<b>Conservation Laws in Einstein's General Theory of Relativity— WILLIAM R. DAVIS . . . . .</b>	
<b>29</b>	<b>29</b>
I Introduction . . . . .	29
II Historical Comments—Field Conservation Laws proposed for General Relativity 1916–1959 . . . . .	31
III Properties of General Covariant Field Theories . . . . .	34
IV Remarks on Symmetry Properties and Invariance Principles in Physical Theories . . . . .	37
V Conservation Laws of Particle Mechanics in Riemannian Spacetime . . . . .	40
VI Particle Conservation Laws for Symmetry Properties not representable by Point Deformations . . . . .	41

VII	Field Conservation Law Generators in General . . . . .	43
	Relativity . . . . .	
VIII	Comments on Application of Conservation Laws for . . . . .	45
	Physically Closed Systems . . . . .	
IX	Tensorial Tetrad Conservation Law Generators . . . . .	47
X	Conservation Laws for Curve Congruences with . . . . .	50
	Special Kinematical and Symmetry Properties . . . . .	
XI	Other Integral Conservation Expressions . . . . .	52
XII	Conclusions . . . . .	54

<b>An elementary procedure for the evaluation of electric networks—</b>		
L. JANOSSY . . . . .		65

<b>Canonical Polynomials in the Lanczos Tau Method—EDUARDO L.</b>		
ORTIZ . . . . .		73

I	Introduction . . . . .	73
II	Mathematical Tables and Machine Tables . . . . .	74
III	The Tau Method . . . . .	76
IV	The Canonical Polynomials . . . . .	77
V	The Recursive Form of the Tau Method . . . . .	78
VI	Algebraic Formulation . . . . .	81
VII	Integrated Forms of the Tau Method . . . . .	82
VIII	Expansion of the Approximate Solution in More . . . . .	86
	General Bases . . . . .	
IX	Eigenvalue Problems . . . . .	90

<b>Rational Approximations from Chebyshev Series—C. W. CLENSHAW</b>		
and K. LORD . . . . .		95

I	Introduction . . . . .	95
II	The Generalized Padé Approximation . . . . .	98
III	The Chebyshev-Padé Table . . . . .	98
IV	The Calculation of $S_{m,n}(x)$ . . . . .	101
V	An Example . . . . .	102
VI	Case of Slow Convergence . . . . .	104
VII	Computational Aspects . . . . .	105
VIII	Numerical Results . . . . .	107

<b>Accuracy of Computed Eigensystems and Invariant Subspaces—</b> G. PETERS and J. H. WILKINSON . . . . .	115
--	-----

I Introduction . . . . .	115
II Summary of Perturbation Theory for Normal Matrices . . . . .	115
III Perturbation Theory for Non-Normal Matrices . . . . .	119
IV Eigenvector Perturbations . . . . .	123
V Computation of Orthogonal Bases for an Invariant Subspace . . . . .	124
VI Numerical Example . . . . .	127
VII Attainable Accuracy . . . . .	129
VIII Low Relative Errors in Small Eigenvalues . . . . .	132

<b>Buckling of a Beam under Axial Compression with Elastic Support—</b> A. P. GALLAGHER . . . . .	137
--	-----

I Introduction . . . . .	137
II Formulation of the Integro-Differential Equation . . . . .	139
III Analysis of the Even Modes of Buckling . . . . .	140
IV Analysis of the Odd Modes of Buckling . . . . .	142
V Numerical Results . . . . .	143

<b>The Frequency Approach to Numerical Analysis—</b> R. W. HAMMING . . . . .	151
--	-----

I Introduction . . . . .	151
II The effects of Sampling—Aliasing . . . . .	152
III The Finite Fourier Series . . . . .	154
IV The Nyquist Interval and the Sampling Theorem . . . . .	158
V The Difference Table and Noise . . . . .	160
VI A Quick Look at Integration . . . . .	162
VII Smoothing . . . . .	163
VIII The Gibbs Phenomenon . . . . .	166
IX Elementary Filter Theory . . . . .	169
X More Advanced Filter Theory . . . . .	172
XI Summary . . . . .	175

<b>Detouring around Computational Roadblocks—A Tale of Two Integrals—</b> FORMAN S. ACTON . . . . .	177
<b>The Hypercircle Method—</b> J. L. SYNGE . . . . .	201
I Simplification . . . . .	201
II An Example: The Dirichlet Problem . . . . .	203
III The Pay-Off in the Dirichlet Problem . . . . .	207
IV More General View. The Hypercircle . . . . .	209
V Historical Note . . . . .	212
VI The Significance of a Small Hypersphere . . . . .	213
VII Vertices . . . . .	215
<b>Lower Bounds for the Dirichlet Integral—</b> J. J. MCMAHON . . . . .	219
I The Problem . . . . .	219
II Essential Inequality . . . . .	220
III Method of Constructing Normally-Continuous Divergent-Free Vector-Fields . . . . .	221
IV A Class of Functions and Vector-Fields . . . . .	222
V Properties of $P''_{\rho\sigma}$ . . . . .	
VI Formulae for the Three Fundamental Vector-Fields . . . . .	225
VII Integrals of Vector-Fields . . . . .	228
VIII Use of Symmetry . . . . .	230
IX A Calculation with Lattice Edge $a = 1/2$ . . . . .	231
<b>The Koenig–Hadamard Theorem again—</b> ALSTON S. HOUSEHOLDER . . . . .	235
<b>Significance Arithmetic—On the Algebra of Binary Strings—</b> N. METROPOLIS and GIAN-CARLO ROTA . . . . .	241
I Introduction . . . . .	241
II The Arithmetic of Binary Strings . . . . .	243
III Multiplication . . . . .	247
IV Binary Functions . . . . .	250

<b>Practical Algorithms for Finding the Type of a Polynomial—</b> JOHN J. H. MILLER . . . . .	253
--	-----

I Introduction . . . . .	253
II The Type of a Polynomial Relative to the Unit Circle . . . . .	254
III The Type of a Polynomial Relative to the Imaginary Axis . . . . .	256
IV Examples . . . . .	260

<b>The Edge-Function Method in Elastostatics— P. M. QUINLAN . . . . .</b>	265
---	-----

Introduction . . . . .	265
I The Elastostatic Problem . . . . .	266
II Edge-Functions for a Polygonal Region . . . . .	267
III Derived Edge-Functions . . . . .	269
IV Some Particular Integrals . . . . .	271
V Polygonal Beam: The Boundary Identity Problem . . . . .	272
VI Trapezoidal Beam— Illustration Examples . . . . .	276
VII Polar Elasto-Functions . . . . .	278
VIII Singular Loadings . . . . .	282
IX Singular Loadings on Boundary . . . . .	284
X Symmetrical Functions . . . . .	286
XI Symmetrical Singular Loadings . . . . .	287
XII Applications . . . . .	288

<b>Generalised Lobatto Quadrature Formulas for Contour Integrals—</b> S. J. MASKELL and R. A. SACK . . . . .	295
---	-----

I Introduction . . . . .	295
II General Formulas for the Coefficients . . . . .	298
III Generalized Lobatto— Mehler Quadrature . . . . .	300
IV Numerical Tests . . . . .	303
V Conclusions . . . . .	308

<b>Spline Functions and Differential Equations – First Order Equations –</b>	
I. J. SCHOENBERG . . . . .	311
I A Remark Due to C. Lanczos . . . . .	311
II The Spline Approximations of Higher Degree . . . . .	313
III The Construction of the Spline Approximation $S(x)$ . . . . .	314
IV The Unique Existence of $S_n(x)$ and on Error Estimate . . . . .	316
V All Derivatives of $S(x)$ Approximate those of $y(x)$ . . . . .	320
VI Examples . . . . .	321
