

CONTENTS

INTRODUCTION	1
NOTATION AND SOME THEOREMS FROM THE CALCULUS	3
Notation	3
Theorems	4
Part I FLOATING POINT ARITHMETIC	7
1. FLOATING POINT ARITHMETIC	9
Basic Concepts	9
Implications	14
Part II NUMERICAL ANALYSIS	23
1. INTERPOLATION AND APPROXIMATION	26
1.1 Polynomial Interpolation	26
1.2 Least Squares Approximation	43
1.3 Cubic Interpolatory Splines	54
2. INTEGRATION	64
Interpolatory Methods	64
Error of Simpson's Rule	65
Iterative Procedures	67
An Adaptive Procedure	69
Measures of Error	72
Some Devices for Integration	73

3. ROOTS OF NONLINEAR EQUATIONS	87
The Problem	87
Bisection, Newton's Method, and the Secant Rule	88
Convergence of the Secant Rule	92
Practical Problems of Newton's Method and the Secant Rule	95
An Algorithm Combining Bisection and the Secant Rule	96
Condition, Limiting Precision, and Multiple Roots	100
 4. ORDINARY DIFFERENTIAL EQUATIONS	 109
Elements of the Theory	109
A Simple Numerical Scheme	116
One-Step Methods	121
Errors—Local and Global	128
Estimating Local Errors	131
Step-size Strategy	133
Miscellaneous	135
 Part III NUMERICAL LINEAR ALGEBRA	 145
SYSTEMS OF LINEAR EQUATIONS	147
Basic Concepts	147
Elimination with Partial Pivoting and Scaling	149
Accuracy	157
 Part IV SOLUTIONS TO EXERCISES	 171
Solutions for I	173
Solutions for II.1.1	175
Solutions for II.1.2	183
Solutions for II.1.3	187
Solutions for II.2	191
Solutions for II.3	200
Solutions for II.4	205
Solutions for III	216

Part V PROGRAMS	225
Polynomial Interpolation	227
Least Squares Approximation	230
Cubic Interpolatory Splines	234
Integration	238
Roots of Nonlinear Equations	242
Ordinary Differential Equations	246
Systems of Linear Equations	252
REFERENCES	256
