Contents

Introduction 1

1. Special Classes of Nondifferentiable Functions and Generalizations of the Concept of the Gradient 6

1.1 The Need to Introduce Special Classes of Nondifferentiable Functions 6
1.2 Convex Functions. The Concept of Subgradient 7
1.3 Some Methods for Computing Subgradients 13
1.4 Almost Differentiable Functions 17
1.5 Semismooth and Semiconvex Functions 19

2. The Subgradient Method 22

2.1 The Problem of Stepsize Selection in the Subgradient Method . 22
2.2 Basic Convergence Results for the Subgradient Method 24
2.3 On the Linear Rate of Convergence of the Subgradient Method . 30
2.4 The Subgradient Method and Fejer-type Approximations . . . 36
2.5 Methods of ε-subgradients 42
2.6 An Extension of the Subgradient Method to a Class of Nonconvex Functions. Stochastic Versions and Stability of the Method 44

3. Gradient-type Methods with Space Dilation 48

3.1 Heuristics of Methods with Space Dilation 48
3.2 Operators of Space Dilation 49
3.3 The Subgradient Method with Space Dilation in the Direction of the Gradient 51
3.4 Convergence of Algorithms with Space Dilation 52
3.5 Application of the Subgradient Method with Space Dilation to the Solution of Systems of Nonlinear Equations 62

3.6 A Minimization Method Using the Operation of Space Dilation in the Direction of the Difference of Two Successive Almost-Gradients 68
3.7 Convergence of a Version of the *r*-Algorithm with Exact Directional Minimization 77
3.8 Relations between SDG Algorithms and Algorithms of Successive Sections 86
3.9 Computational Modifications of Subgradient Methods with Space Dilation 91

4. Applications of Methods for Nonsmooth Optimization to the Solution of Mathematical Programming Problems 93

4.1 Application of Subgradient Algorithms in Decomposition Methods 93
4.2 An Iterative Method for Solving Linear Programming Problems of Special Structure 101
4.3 The Solution of Distribution Problems by the Subgradient Method 105
4.4 Experience in Solving Production-Transportation Problems by Subgradient Algorithms with Space Dilation 110
4.5 Application of *r*-Algorithms to Nonlinear Minimax Problems . . 135
4.6 Application of Methods for Minimizing Nonsmooth Functions to Problems of Interpreting Gravimetric Observations 142
4.7 Other Areas of Applications of Generalized Gradient Methods . 146

Concluding Remarks 150
