

Contents

Chapter I. Preliminaries	1
§ 1. Some Notation, Definitions and Basic Facts	1
A. Functional Analytic Notation and Terminology	1
B. The Approximation Problem. Definitions and Basic Facts	3
C. An Invariance Principle	4
D. Divided Differences	5
§ 2. A Review of the Characterization of Nearest Points in Linear and Convex Sets	6
A. Characterization via the Hahn-Banach Theorem and the Kolmogorov Criterion	6
B. Special Function Spaces	8
§ 3. Linear and Convex Chebyshev Approximation	11
A. Haar's Uniqueness Theorem. Alternants	12
B. Haar Cones	13
C. Alternation Theorem for Haar Cones	16
§ 4. L_1 -Approximation and Gaussian Quadrature Formulas	18
A. The Hobby-Rice Theorem	18
B. Existence of Generalized Gaussian Quadrature Formulas	19
C. Extremal Properties	22
 Chapter II. Nonlinear Approximation: The Functional Analytic Approach	 24
§ 1. Approximative Properties of Arbitrary Sets	24
A. Existence	24
B. Uniqueness from the Generic Viewpoint	27
§ 2. Solar Properties of Sets	31
A. Suns. The Kolmogorov Criterion	31
B. The Convexity of Suns	34
C. Suns and Moons in $C(X)$	35
§ 3. Properties of Chebyshev Sets	38
A. Approximative Compactness	38
B. Convexity and Solarity of Chebyshev Sets	40
C. An Alternative Proof	43

Chapter III. Methods of Local Analysis	47
§ 1. Critical Points	48
A. Tangent Cones and Critical Points	48
B. Parametrizations and C^1 -Manifolds	51
C. Local Strong Uniqueness	54
§ 2. Nonlinear Approximation in Hilbert Spaces	58
A. Nonlinear Approximation in Smooth Banach Spaces	58
B. A Classification of Critical Points	59
C. Continuity	61
D. Functions with Many Local Best Approximations	63
§ 3. Varisolvency	66
A. Varisolvent Families	66
B. Characterization and Uniqueness of Best Approximations	68
C. Regular and Singular Points	71
D. The Density Property	73
§ 4. Nonlinear Chebyshev Approximation: The Differentiable Case	75
A. The Local Kolmogorov Criterion	76
B. The Local Haar Condition	76
C. Haar Manifolds	77
D. The Local Uniqueness Theorem for C^1 -Manifolds	79
§ 5. The Gauss-Newton Method	80
A. General Convergence Theory	81
B. Numerical Stabilization	85
Chapter IV. Methods of Global Analysis	88
§ 1. Preliminaries. Basic Ideas	88
A. Concepts for the Classification of Critical Points	88
B. An Example with Many Critical Points	90
C. Local Homeomorphisms	91
§ 2. The Uniqueness Theorem for Haar Manifolds	93
A. The Deformation Theorem	94
B. The Mountain Pass Theorem	97
C. Perturbation Theory	99
§ 3. An Example with One Nonlinear Parameter	100
A. The Manifold $E_n^c \setminus E_{n-1}^c$	101
B. Reduction to One Parameter	102
C. Improvement of the Bounds	104
Chapter V. Rational Approximation	107
§ 1. Existence of Best Rational Approximations	108
A. The Existence Problem in $C(X)$	108
B. Rational L_p -Approximation. Degeneracy	110
§ 2. Chebyshev Approximation by Rational Functions	113

A. Uniqueness and Characterization of Best Approximations	113
B. Normal Points	115
C. The Lethargy Theorem and the Lip 1 Conjecture	119
§ 3. Rational Interpolation	121
A. The Cauchy Interpolation Problem	121
B. Rational Functions with Real Poles	123
C. Comparison Theorems	127
§ 4. Padé Approximation and Moment Problems	130
A. Padé Approximation	130
B. The Stieltjes and the Hamburger Moment Problem	133
§ 5. The Degree of Rational Approximation	137
A. Approximation of e^x on $[-1, +1]$	137
B. Approximation of e^{-x} on $[0, \infty]$ by Inverses of Polynomials	140
C. Rational Approximation of e^{-x} on $[0, \infty)$	143
D. Rational Approximation of \sqrt{x}	145
E. Rational Approximation of $ x $	152
§ 6. The Computation of Best Rational Approximations	158
A. The Differential Correction Algorithm	159
B. The Remes Algorithm	163
Chapter VI. Approximation by Exponential Sums	168
§ 1. Basic Facts	168
A. Proper and Extended Exponential Sums	168
B. The Descartes' Rule of Signs	169
§ 2. Existence of Best Approximations	170
A. A Bound for the Derivatives of Exponential Sums	171
B. Existence	173
§ 3. Some Facts on Interpolation and Approximation	175
A. Interpolation by Exponential Sums	175
B. The Speed of Approximation of Completely Monotone Functions	177
Chapter VII. Chebyshev Approximation by γ -Polynomials	181
§ 1. Descartes Families	181
A. γ -Polynomials	181
B. Sign-Regular and Totally Positive Kernels	183
C. The Generalized Descartes' Rule	185
D. Further Generalizations	188
E. Examples	189
§ 2. Approximation by Proper γ -Polynomials	190
A. Varisolvency	190
B. Sign Distribution	191
C. Positive Sums	192
§ 3. Approximation by Extended γ -Polynomials: Elementary Theory	195

A. Non-Uniqueness, Characterization of Best Approximations	195
B. γ -Polynomials of Order 2	196
§ 4. The Haar Manifold $G_n \setminus G_{n-1}$	199
A. Simple Parametrizations	199
B. The Differentiable Structure	202
C. Families with Bounded Spectrum	206
§ 5. Local Best Approximations	207
A. Characterization of Local Best Approximations	207
B. The Generic Viewpoint	208
§ 6. Maximal Components	210
A. Introduction of Maximal Components	211
B. The Boundary of Maximal Components	213
§ 7. The Number of Local Best Approximations	217
A. The Construction of Local Best Approximations	217
B. Completeness of the Standard Construction	219
Chapter VIII. Approximation by Spline Functions with Free Nodes . . .	221
§ 1. Spline Functions with Fixed Nodes	221
A. Chebyshevian Spline Functions	221
B. Zeros of Spline Functions	224
C. Characterization of Best Uniform Approximations	226
§ 2. Chebyshev Approximation by Spline Functions with Free Nodes . .	228
A. Existence	228
B. Continuity and Differentiability Properties	230
C. Characterization of Best Approximations	232
§ 3. Monosplines of Least L_∞ -Norm	236
A. The Family $S_{n,k}^+$	236
B. Monosplines	237
C. The Fundamental Theorem of Algebra for Monosplines	241
D. Monosplines with Multiple Nodes of Least L_∞ -Norm	245
E. Perfect Splines and Generalized Monosplines	247
§ 4. Monosplines of Least L_1 -Norm	248
A. Examples of Nonuniqueness	249
B. Duality	250
C. The Improvement Operator	253
D. Proof of Lemma 4.3	256
§ 5. Monosplines of Least L_p -Norm	258
A. The Rodriguez Function for the L_p -Norms	259
B. The Degree of the Mapping Φ	261
C. The Uniqueness Theorem	265
Appendix. The Conjectures of Bernstein and Erdős	270
Bibliography	277
Index	287
