Chapter 1	
Introduction to shape optimization	
1.1. Preface	5
Chapter 2	
Preliminaries and the material derivative method	13
2.1. Domains in \mathbb{R}^N of class C^k	14
2.2. Surface measures on Γ	17
2.3. Functional spaces	17
2.4. Linear elliptic boundary value problems	20
2.5. Shape functionals	29
2.6. Shape functionals for problems governed by linear elliptic boundary value problems	31
2.6.1. Shape functionals for transmission problems	32
2.6.2. Approximation of homogenous Dirichlet problems	35
2.7. Convergence of domains	41
2.8. Transformations T_t of domains	45
2.9. The speed method	49
2.10. Admissible speed vector fields $V^k(D)$	53
2.11. Eulerian derivatives of shape functionals	54
2.12. Non-differentiable shape functionals	60
2.13. Properties of T_t transformations	62
2.14. Differentiability of transported functions	65
2.15. Derivatives for $t > 0$	75
2.16. Derivatives of domain integrals	77
2.17. Change of variables in boundary integrals	77
2.18. Derivatives of boundary integrals	79
2.19. The tangential divergence of the field V on Γ	81
2.20. Tangential gradients and Laplace–Beltrami operators on Γ	85
2.21. Variational problems on Γ	87
2.22. The transport of differential operators	89
2.23. Integration by parts on Γ	90
2.24. The transport of Laplace–Beltrami operators	95
2.25. Material derivatives	98

2.26. Material derivatives on Γ	100
2.27. The material derivative of a solution to the Laplace equation with Dirichlet boundary conditions	101
2.28. Strong material derivatives for Dirichlet problems	107
2.29. The material derivative of a solution to the Laplace equation with Neumann boundary conditions	109
2.30. Shape derivatives	111
2.31. Derivatives of domain integrals (II)	112
2.32. Shape derivatives on Γ	113
2.33. Derivatives of boundary integrals	115
Chapter 3	
Shape derivatives for linear problems	117
3.1. The shape derivative for the Dirichlet boundary value problem	118
3.2. The shape derivative for the Neumann boundary value problem	119
3.3. Necessary optimality conditions	121
3.4. Parabolic equations	127
3.4.1 Neumann boundary conditions	128
3.4.2 Dirichlet boundary conditions	133
3.5. Shape sensitivity in elasticity	135
3.6. Shape sensitivity analysis of the smallest eigenvalue	141
3.7. Shape sensitivity analysis of the Kirchhoff plate	146
3.8. Shape derivatives of boundary integrals: the non-smooth case in \mathbb{R}^2	150
3.9. Shape sensitivity analysis of boundary value problems with singularities	153
3.10. Hyperbolic initial boundary value problems	157
Chapter 4	
Shape sensitivity analysis of variational inequalities	163
4.1. Differential stability of the metric projection in Hilbert spaces	167
4.2. Sensitivity analysis of variational inequalities in Hilbert spaces	177
4.3. The obstacle problem in $H^1(\Omega)$	179
4.3.1. Differentiability of the Newtonian capacity	184
4.3.2. The shape controllability of the free boundary	185
4.4. The Signorini problem	193
4.5. Variational inequalities of the second kind	196
4.6. Sensitivity analysis of the Signorini problem in elasticity	205
4.6.1. Differential stability of solutions to variational inequalities in Hilbert spaces	207
4.6.2. Shape sensitivity analysis	212
4.7. The Signorini problem with given friction	217
4.7.1. Shape sensitivity analysis	222
4.8. Elasto-Plastic torsion problems	229
4.9. Elasto-Visco-Plastic problems	234
References	240
