Contents

Preface xi

Chapter 1 **Integer Optimization and Its Applications**

1.1 What Is Integer Optimization? 1
1.2 "Solving" the Integer Problem by Rounding the Continuous Optimum 4
1.3 Examples of the Applications of Integer Programming 8
1.4 Methods of Integer Programming 27
1.5 Organization of the Book 29
Problems 30

Chapter 2 **Linear Programming**

2.1 Introduction 34
2.2 Definition of Linear Programming 35
2.3 The Simplex Method 37
2.4 The Revised Simplex Method 49
2.5 The Dual Problem 52
2.6 Bounded Variables 74
Problems 79

Chapter 3 **Zero–One Implicit Enumeration**

3.1 Introduction 85
3.2 Zero–One Equivalence of the Integer Problem 86
3.3 Concept of Implicit Enumeration 87
3.4 Enumeration Scheme 89
3.5 Fathoming Tests 94
3.6 Nonlinear Zero–One Problem 116
3.7 Mixed Zero–One Problem 119
3.8 Concluding Remarks 133
Problems 133

Chapter 4 **Branch-and-Bound Methods**

4.1 The Concept of Branch-and-Bound 139
4.2 Branch-and-Bound Principle 142
4.3 General (Mixed) Integer Linear Problem 144
4.4 Solution of Nonlinear Integer Programs by Branch-and-Bound 171
4.5 Concluding Remarks 172
Problems 173

Chapter 5 **Cutting Methods**

5.1 Introduction 177
5.2 Dual Cutting Methods 179
5.3 Primal Cutting Methods 213
5.4 Comments on Computational Experience 224
5.5 Concluding Remarks 225
Problems 225

Chapter 6 **The Asymptotic Integer Algorithm**

6.1 Introduction 230
6.2 The Idea of the Asymptotic Algorithm 231
6.3 Development of the Asymptotic Algorithm 234
6.4 Solution of the Group (Relaxed) Problem 241
6.5 Solution of Integer Programs by the Group Problem 253
6.6 Reducing the Number of Congruences 258
6.7 Faces of the Corner Polyhedron 259
6.8 Concluding Remarks 260
Problems 260

Chapter 7 **Algorithms for Specialized Integer Models**

7.1 Introduction 263
7.2 Knapsack Problem 263
7.3 Fixed-Charge and Plant Location Problems 285
7.4 Traveling Salesman Problem 304

7.5 Set Covering Problem 316
7.6 Concluding Remarks 335
Problems 335

Chapter 8 **Computational Considerations in Integer Programming**

8.1 Introduction 342
8.2 Model Formulation in Integer Programming 343
8.3 A Composite Algorithm 346
8.4 "General" Approximate Methods for Integer Programming 347
8.5 Concluding Remarks 351
