

# **CONTENTS**

<b>TERMINOLOGY</b>	<b>xv</b>
<b>GLOSSARY OF SYMBOLS</b>	<b>xvi</b>

<b>1</b>	<b>GENERAL PRELIMINARIES</b>	<b>1</b>
1.1	Introduction	1
1.2	Basic Concepts and Notations	2
1.21	Some concepts and notations	2
1.22	Classification of iteration functions	8
1.23	Order	9
1.24	Concepts related to order	11
<b>2</b>	<b>GENERAL THEOREMS ON ITERATION FUNCTIONS</b>	<b>14</b>
2.1	The Solution of a Fixed-Point Problem	14
2.2	Linear and Superlinear Convergence	17
2.21	Linear convergence	18
2.22	Superlinear convergence	19
2.23	The advantages of higher-order iteration functions	22
2.3	The Iteration Calculus	24
2.31	Preparation	24
2.32	The theorems of the iteration calculus	27

<b>3</b>	<b>THE MATHEMATICS OF DIFFERENCE RELATIONS</b>	<b>38</b>
3.1	Convergence of Difference Inequalities	38
3.2	A Theorem on the Solutions of Certain Inhomogeneous Difference Equations	40
3.3	On the Roots of Certain Indicial Equations	46
3.31	The properties of the roots	46
3.32	An important special case	52
3.4	The Asymptotic Behavior of the Solutions of Certain Difference Equations	52
3.41	Introduction	52
3.42	Difference equations of type 1	53
3.43	Difference equations of type 2	57
<b>4</b>	<b>INTERPOLATORY ITERATION FUNCTIONS</b>	<b>60</b>
4.1	Interpolation and the Solution of Equations	60
4.11	Hyperosculatory interpolation	60
4.12	Relation of interpolation to the calculation of roots	61
4.2	The Order of Interpolatory Iteration Functions	62
4.21	The order of iteration functions generated by inverse interpolation	62
4.22	The equal information case	65
4.23	The order of iteration functions generated by direct interpolation	67
4.3	Examples	75
<b>5</b>	<b>ONE-POINT ITERATION FUNCTIONS</b>	<b>78</b>
5.1	The Basic Sequence $E_s$	78
5.11	The formula for $E_s$	79
5.12	An example	82
5.13	The structure of $E_s$	83
5.2	Rational Approximations to $E_s$	88
5.21	Iteration functions generated by rational approximation to $E_s$	88
5.22	The formulas of Halley and Lambert	91

5.3 A Basic Sequence of Iteration Functions Generated by Direct Interpolation	92
5.31 The basic sequence $\Phi_{0,s}$	92
5.32 The iteration function $\Phi_{0,s}$	93
5.33 Reduction of degree	94
5.4 The Fundamental Theorem of One-Point Iteration Functions	97
5.5 The Coefficients of the Error Series of $E_s$	100
5.51 A recursion formula for the coefficients	100
5.52 A theorem concerning the coefficients	103

## **6 ONE-POINT ITERATION FUNCTIONS WITH MEMORY 105**

6.1 Interpolatory Iteration Functions	105
6.11 Comments	105
6.12 Examples	106
6.2 Derivative-Estimated One-Point Iteration Functions with Memory	109
6.21 The secant iteration function and its generalization	109
6.22 Estimation of $f^{(s-1)}$	110
6.23 Estimation of $\mathcal{F}^{(s-1)}$	116
6.24 Examples	121
6.3 Discussion of One-Point Iteration Functions with Memory	123
6.31 A conjecture	123
6.32 Practical considerations	124
6.33 Iteration functions which do not use all available information	125
6.34 An additional term in the error equation	125

## **7 MULTIPLE ROOTS 126**

7.1 Introduction	126
7.2 The Order of $E_s$	127
7.3 The Basic Sequence $\mathcal{E}_s$	130
7.31 Introduction	130
7.32 The structure of $\mathcal{E}_s$	131
7.33 Formulas for $\mathcal{E}_s$	139
7.4 The Coefficients of the Error Series of $\mathcal{E}_s$	140

7.5 Iteration Functions Generated by Direct Interpolation	143
7.51 The error equation	143
7.52 On the roots of an indicial equation	144
7.53 The order	147
7.54 Discussion and examples	149
7.6 One-Point Iteration Functions with Memory	149
7.7 Some General Results	151
7.8 An Iteration Function of Incommensurate Order	154

## **8 MULTIPONT ITERATION FUNCTIONS 158**

8.1 The Advantages of Multipoint Iteration Functions	158
8.2 A New Interpolation Problem	161
8.21 A new interpolation formula	161
8.22 Application to the construction of multipoint iteration functions	163
8.3 Recursively Formed Iteration Functions	165
8.31 Another theorem of the iteration calculus	166
8.32 The generalization of the previous theorem	168
8.33 Examples	172
8.34 The construction of recursively formed iteration functions	174
8.4 Multipoint Iteration Functions Generated by Derivative Estimation	178
8.5 Multipoint Iteration Functions Generated by Composition	183
8.6 Multipoint Iteration Functions with Memory	185

## **9 MULTIPONT ITERATION FUNCTIONS: CONTINUATION 188**

9.1 Introduction	188
9.2 Multipoint Iteration Functions of Type 1	190
9.21 The third-order case	190
9.22 The fourth-order case	192
9.3 Multipoint Iteration Functions of Type 2	197
9.31 The third-order case	198
9.32 The fourth-order case	200
9.4 Discussion of Criteria for the Selection of an Iteration Function	204

<b>10</b>	<b>ITERATION FUNCTIONS WHICH REQUIRE NO EVALUATION OF DERIVATIVES</b>	<b>209</b>
10.1	Introduction	209
10.2	Interpolatory Iteration Functions	210
10.21	Direct interpolation	210
10.22	Inverse interpolation	213
10.3	Some Additional Iteration Functions	214
<b>11</b>	<b>SYSTEMS OF EQUATIONS</b>	<b>215</b>
11.1	Introduction	215
11.2	The Generation of Vector-Valued Iteration Functions by Inverse Interpolation	218
11.3	Error Estimates for Some Vector-Valued Iteration Functions	220
11.31	The generalized Newton iteration function	221
11.32	A third-order iteration function	222
11.33	Some other vector-valued iteration functions	224
11.34	A test function	226
11.4	Vector-Valued Iteration Functions which Require No Derivative Evaluations	229
<b>12</b>	<b>A COMPILATION OF ITERATION FUNCTIONS</b>	<b>231</b>
12.1	Introduction	231
12.2	One-Point Iteration Functions	231
12.3	One-Point Iteration Functions with Memory	232
12.4	Multiple Roots	234
12.41	Multiplicity known	234
12.42	Multiplicity unknown	235
12.5	Multipoint Iteration Functions	236
12.6	Multipoint Iteration Functions with Memory	238
12.7	Systems of Equations	238
<b>APPENDICES</b>		
A.	INTERPOLATION	239
A.1	Introduction	239

A.2	An Interpolation Problem and Its Solution	240
A.21	Statement of the problem	240
A.22	Divided differences	242
A.23	The Newtonian formulation	243
A.24	The Lagrange-Hermite formulation	244
A.25	The interpolation error	244
A.3	The Equal Information Case	245
A.31	The Newtonian formulation	245
A.32	The Lagrange-Hermite formulation	247
A.33	The interpolation error	247
A.4	The Approximation of Derivatives	248
A.41	Statement of the problem	248
A.42	Derivative estimation from the Newtonian formulation	248
A.43	Derivative estimation from the Lagrange-Hermite formulation	250
A.5	The Error in the Approximation of Derivatives	251
A.51	Discussion	251
A.52	First proof of the error formula	252
A.53	Second proof of the error formula	253
B.	ON THE $j$ TH DERIVATIVE OF THE INVERSE FUNCTION	258
C.	SIGNIFICANT FIGURES AND COMPUTATIONAL EFFICIENCY	260
D.	ACCELERATION OF CONVERGENCE	265
D.1	Introduction	265
D.2	Aitken's $\delta^2$ Transformation	265
D.3	The Steffensen-Householder-Ostrowski Iteration Function	268
E.	NUMERICAL EXAMPLES	270
E.1	Introduction	270
E.2	Growth of the Number of Significant Figures	271
E.3	One-Point and One-Point with Memory Iteration Functions	272
E.4	Multiple Roots	276
E.5	Multipoint Iteration Functions	281
E.6	Systems of Equations	284
F.	AREAS FOR FUTURE RESEARCH	288
