

CONTENTS

Section I

Accuracy of Computation

- The Use of the Cestac Method in the Parallel Computation of Roots of Polynomials
R. Alt 3
- Cestac, A Tool for a Stochastic Round-Off Error Analysis in Scientific Computing
M-C. Brunet and F. Chatelin 11
- Reducing Abbreviation Errors in Iterative Resolution of Linear Systems
M. Pichat 21
- Optimal Termination Criterion and Accuracy Tests in Mathematical Programming
P. Tolla 27
- On the Use of the Normed Residue to Check the Quality of the Solution of a
Linear System
F. Cordellier 33
- Computable Bounds for Solutions of Integral Equations
L.B. Rall 41
- Arbitrarily Accurate Boundaries for Solutions of ODEs with Initial Values Using
Variable Precision Arithmetic
F. Krückeberg and R. Leisen 47

Section II

Approximations and Algorithms

- Remarks on Some Modified Romberg Algorithms for Numerical Integration
T. Håvie 57
- Linear and Quasilinear Extrapolation Algorithms
G. Mühlbach 65
- Vector Padé Approximants
J. Van Iseghem 73
- Three Computational Aspects of Continued Fraction/Padé Approximants
L. Jacobsen and H. Waadeland 79

An Universal Conversational Program for Computing Sequences of Padé Approximants in the Non Normal Case A. Draux and P. Van Ingelandt	85
Efficient Computation of a Group of Close Eigenvalues for Integral Operators M. Ahues, J. Alvizu, and F. Chatelin	89
Data Flow Analysis of Orthogonal Properties on the Conjugate Gradient and the Lanczos Algorithm T. Nodera	95
Section III	
Solution of ODE's and PDE's	
Efficient Preconditionings for Matrix Problems Resulting from High Order Methods for Partial Differential Equations Y.S. Wong	107
Variable Step Size / Variable Order PDE Solver with Global Optimisation W. Schönauer, E. Schnepf, and H. Müller	117
Approximate Practical Stability for Nonlinear Evolution PDEs E. Adams, W.F. Ames, and R. Lang	125
Current Methods for Large Stiff ODE Systems A.C. Hindmarsh	135
Exponential-Fitted Methods for Stiff Ordinary Differential Equations D.T. Pratt	145
Linearized D-Mapping for Stiff Computations S.K. Dey	153
On the Use of Newton's Method in the Adaptive Solution of Nonlinear Two-Point Boundary Value Problems R.M.M. Mattheij and M.D. Smooke	157
Spline Approximations in Numerical Method of Lines Solution of First-Order Hyperbolic Partial Differential Equations S.S. Hu and X.M. Shao	163
Some Insights into the Stability of Difference Approximations for Hyperbolic Initial-Boundary-Value Problems R.F. Warming and R.M. Beam	171
Use of a Dynamic Grid Adaption in the ASWR-Method U. Graf, P. Romstedt, and W. Werner	177
The Solution of an Elliptic PDE with Periodic Boundary Conditions in a Rectangular Region D.J. Evans	185

A Modified Galerkin Scheme for Elliptic Equations with Natural Boundary Conditions G.C. Hsiao	193
Numerical Grid Generation through Second Order Differential-Geometric Models Z.U.A. Warsi and W.N. Tiarn	199
Factorization and Path Integration of the Helmholtz Equation: Numerical Algorithms L. Fishman, J.J. McCoy, and S.C. Wales	205
A General Ergun Equation for a Multilayered Porous Medium D.A. Bennett, R. Bradley, and M. Cross	213
Iterative Solutions of Problems with Shocks Q. Huynh	221
The Lumped Mass Finite Element Method for Parabolic Equations V. Thomée	231
The Solution of Burgers' Equation by Boundary Value Methods D.J. Evans and A. Danaee	235
Section IV	
Computational Acoustics	
Numerical Models for Ocean Acoustic Modes M.B. Porter and E.L. Reiss	243
The Relation of the Parabolic Equation Method to the Adiabatic Mode Approximation A.D. Pierce	249
A Survey of Numerical Methods for a New Class of Nonlinear Partial Differential Equations Arising in Nonspherical Geometrical Optics R.L. Sternberg	257
Wide Angle Parabolic Approximations in Underwater Acoustics D.F. St. Mary	265
The Application of the Boundary Integral Element Method to the Problem of Scattering of Sound Waves by an Elastic Wedge S.D. Mobbs	273
A Wave Propagation Computation Technique Using Function Theoretic Representation M.D. Duston, R.P. Gilbert, and D.H. Wood	281
Compensating for Wavefront Turning in Wavefront Curvature Ranging D.H. Wood	289
Changes in Eigenvalues due to Bottom Interaction Using Perturbation Theory M.D. Duston, G. Verma, and D.H. Wood	295

Section V**Computational Fluid Dynamics**

Computational Fluid Dynamics, Convergent or Asymptotic S-I. Cheng and C. Sato	305
Highly Accurate Shock Flow Calculations with Moving Grids and Mesh Refinement E.J. Kansa	311
Modified Equation Methods for One-Dimensional Flame Propagation Problems J.I. Ramos	317
Numerical Solution of Time-Dependent Incompressible Flows A. Karlsson and L. Fuchs	327
Pseudocharacteristic Method of Lines Simulation of Single- and Two-Phase One-Dimensional Flow Transients Y.-Z. Wang and S.H. Johnson	333
Lagrangian Modeling of Turbulent Dispersion in Shear Layers C. Benocci, D. Olivari, and E. Vergison	339
Studies in a Shallow Water Fluid Model Topography B. Neta, R.T. Williams, and D.E. Hinsman	347
Computation of the Fine Vortex Structures of Fluids K. Gustafson	355
Inviscid Vortex Flow Simulations by Megacell Solutions to the Euler Equations A. Rizzi and C.J. Purcell	365
Transonic Potential Flows: Improved Accuracy by Using Local Grids C.Y. Gu and L. Fuchs	369
Numerical Analysis of Unsteady Wake Development behind an Impulsively Started Cylinder in Slightly Viscous Fluid A.Y. Cheer	377
Numerical Treatment of Shocks in Unsteady Potential Flow Computation H. Schippers	387
Generalized Vortex Methods for Stratified Layered Flows G.R. Baker	393
A Two-Fluid Model of Turbulence Applied to Simulation of Fires N.C. Markatos and K.A. Pericleous	399
Numerical Prediction of Turbulent Flow over a Surface-Mounted Cube Y. Ando, M. Kawai, T. Fujimoto, and N. Mizumoto	407
Numerical Modelling of Air Flow in Confined Tapered Duct Inlets J. Prieur Du Plessis, M.R. Collins, and D.G. Kröger	415

Subsurface Fluid Dynamics and Transport Phenomena Based on a Vector Representation
W. Zijl
