

CONTENTS

<i>Preface</i>	xiii
<i>Acknowledgments</i>	xvii
<i>Notation</i>	xix
<i>List of Fundamental Matrix Properties</i>	xxi
<i>List of Iterative Methods</i>	xxiii
1. Introduction	1
1.1. The Model Problem	2
Supplementary Discussion	6
Exercises	6
2. Matrix Preliminaries	7
2.1. Review of Matrix Theory	7
2.2. Hermitian Matrices and Positive Definite Matrices	18
2.3. Vector Norms and Matrix Norms	25
2.4. Convergence of Sequences of Vectors and Matrices	34
2.5. Irreducibility and Weak Diagonal Dominance	36
2.6. Property A	41
2.7. L -Matrices and Related Matrices	42
2.8. Illustrations	48
Supplementary Discussion	53
Exercises	55

3. Linear Stationary Iterative Methods	63
3.1. Introduction	63
3.2. Consistency, Reciprocal Consistency, and Complete Consistency	65
3.3. Basic Linear Stationary Iterative Methods	70
3.4. Generation of Completely Consistent Methods	75
3.5. General Convergence Theorems	77
3.6. Alternative Convergence Conditions	80
3.7. Rates of Convergence	84
3.8. The Jordan Condition Number of a 2×2 Matrix	89
Supplementary Discussion	94
Exercises	95
4. Convergence of the Basic Iterative Methods	106
4.1. General Convergence Theorems	106
4.2. Irreducible Matrices with Weak Diagonal Dominance	107
4.3. Positive Definite Matrices	108
4.4. The SOR Method with Varying Relaxation Factors	118
4.5. <i>L</i> -Matrices and Related Matrices	120
4.6. Rates of Convergence of the J and GS Methods for the Model Problem	127
Supplementary Discussion	132
Exercises	133
5. Eigenvalues of the SOR Method for Consistently Ordered Matrices	140
5.1. Introduction	140
5.2. Block Tri-Diagonal Matrices	141
5.3. Consistently Ordered Matrices and Ordering Vectors	144
5.4. Property A	148
5.5. Nonmigratory Permutations	153
5.6. Consistently Ordered Matrices Arising from Difference Equations	157
5.7. A Computer Program for Testing for Property A and Consistent Ordering	159
5.8. Other Developments of the SOR Theory	162
Supplementary Discussion	163
Exercises	163
6. Determination of the Optimum Relaxation Factor	169
6.1. Virtual Spectral Radius	170
6.2. Analysis of the Case Where All Eigenvalues of B Are Real	171

6.3. Rates of Convergence: Comparison with the Gauss-Seidel Method	188
6.4. Analysis of the Case Where Some Eigenvalues of B Are Complex	191
6.5. Practical Determination of ω_b : General Considerations	200
6.6. Iterative Methods of Choosing ω_b	209
6.7. An Upper Bound for $\bar{\mu}$	211
6.8. A Priori Determination of $\bar{\mu}$: Exact Methods	216
6.9. A Priori Determination of $\bar{\mu}$: Approximate Values	222
6.10. Numerical Results	224
Supplementary Discussion	227
Exercises	228
7. Norms of the SOR Method	233
7.1. The Jordan Canonical Form of \mathcal{L}_ω	234
7.2. Basic Eigenvalue Relation	239
7.3. Determination of $\ \mathcal{L}_\omega\ _{D^{1/2}}$	245
7.4. Determination of $\ \mathcal{L}_{\omega_b}^m\ _{D^{1/2}}$	248
7.5. Determination of $\ \mathcal{L}_\omega\ _{A^{1/2}}$	255
7.6. Determination of $\ \mathcal{L}_{\omega_b}^m\ _{A^{1/2}}$	258
7.7. Comparison of $\ \mathcal{L}_{\omega_b}^m\ _{D^{1/2}}$ and $\ \mathcal{L}_{\omega_b}^m\ _{A^{1/2}}$	264
Supplementary Discussion	265
Exercises	266
8. The Modified SOR Method: Fixed Parameters	271
8.1. Introduction	271
8.2. Eigenvalues of $\mathcal{L}_{\omega,\omega'}$	273
8.3. Convergence and Spectral Radius	277
8.4. Determination of $\ \mathcal{L}_{\omega,\omega'}\ _{D^{1/2}}$	283
8.5. Determination of $\ \mathcal{L}_{\omega,\omega'}\ _{A^{1/2}}$	288
Supplementary Discussion	291
Exercises	291
9. Nonstationary Linear Iterative Methods	295
9.1. Consistency, Convergence, and Rates of Convergence	295
9.2. Periodic Nonstationary Methods	300
9.3. Chebyshev Polynomials	301
Supplementary Discussion	304
Exercises	304

10. The Modified SOR Method: Variable Parameters	306
10.1. Convergence of the MSOR Method	307
10.2. Optimum Choice of Relaxation Factors	307
10.3. Alternative Optimum Parameter Sets	311
10.4. Norms of the MSOR Method: Sheldon's Method	315
10.5. The Modified Sheldon Method	319
10.6. Cyclic Chebyshev Semi-Iterative Method	321
10.7. Comparison of Norms	327
Supplementary Discussion	340
Exercises	341
11. Semi-Iterative Methods	344
11.1. General Considerations	345
11.2. The Case Where G Has Real Eigenvalues	347
11.3. J, JOR, and RF Semi-Iterative Methods	355
11.4. Richardson's Method	361
11.5. Cyclic Chebyshev Semi-Iterative Method	365
11.6. GS Semi-Iterative Methods	367
11.7. SOR Semi-Iterative Methods	374
11.8. MSOR Semi-Iterative Methods	376
11.9. Comparison of Norms	383
Supplementary Discussion	385
Exercises	386
12. Extensions of the SOR Theory: Stieltjes Matrices	391
12.1. The Need for Some Restrictions on A	391
12.2. Stieltjes Matrices	395
Supplementary Discussion	401
Exercises	401
13. Generalized Consistently Ordered Matrices	404
13.1. Introduction	404
13.2. $\text{CO}(q, r)$ -Matrices, Property $A_{q,r}$, and Ordering Vectors	405
13.3. Determination of the Optimum Relaxation Factor	413
13.4. Generalized Consistently Ordered Matrices	418
13.5. Relation between GCO(q, r)-Matrices and CO(q, r)-Matrices	419

13.6. Computational Procedures: Canonical Forms	422
13.7. Relation to Other Work	428
Supplementary Discussion	429
Exercises	430
14. Group Iterative Methods	434
14.1. Construction of Group Iterative Methods	435
14.2. Solution of a Linear System with a Tri-Diagonal Matrix	441
14.3. Convergence Analysis	445
14.4. Applications	452
14.5. Comparison of Point and Group Iterative Methods	454
Supplementary Discussion	456
Exercises	457
15. Symmetric SOR Method and Related Methods	461
15.1. Introduction	461
15.2. Convergence Analysis	463
15.3. Choice of Relaxation Factor	464
15.4. SSOR Semi-Iterative Methods: The Discrete Dirichlet Problem	471
15.5. Group SSOR Methods	474
15.6. Unsymmetric SOR Method	476
15.7. Symmetric and Unsymmetric MSOR Methods	478
Supplementary Discussion	480
Exercises	481
16. Second-Degree Methods	486
Supplementary Discussion	493
Exercises	493
17. Alternating Direction Implicit Methods	495
17.1. Introduction: The Peaceman-Rachford Method	495
17.2. The Stationary Case: Consistency and Convergence	498
17.3. The Stationary Case: Choice of Parameters	503
17.4. The Commutative Case	514
17.5. Optimum Parameters	518

17.6. Good Parameters	525
17.7. The Helmholtz Equation in a Rectangle	531
17.8. Monotonicity	534
17.9. Necessary and Sufficient Conditions for the Commutative Case	535
17.10. The Noncommutative Case	545
Supplementary Discussion	547
Exercises	548
18. Selection of Iterative Method	553
Bibliography	556
<i>Index</i>	565
