

## CONTENTS

Preface to Volume IV.   iii

### Chapter 1. Introduction

- 1-5     The scope of quantum physics.   1-1
- 6-12    Atoms and elementary particles.   1-5
- 13-21   The uncertainty principle.   1-13
- 22-33   The discovery of Planck's constant.   1-24
- References for further study.   1-42
- Problems.   1-44

### Chapter 2. Magnitudes of Physical Quantities in Quantum Physics

- 1-7     General considerations.   2-1
- 8-14    Energy.   2-10
- 15-25   Magnitudes characteristic of atomic and molecular physics.   2-24
- 26-29   The most basic facts of nuclear physics.   2-38
- 30-33   Gravitational and electromagnetic forces.   2-45
- 34-35   Concerning numerical work.   2-48
- 36-43   Advanced topic: The fundamental constants of nature.   2-52
- References for further study.   2-62
- Problems.   2-63

### Chapter 3. Energy Levels

- 1-30    Term schemes.   3-1
- 31-38   Simple theory of electromagnetic transitions.   3-32
- 39-45   The finite widths of energy levels   3-43
- 46-48   Doppler-broadening and collision broadening of spectral lines.   3-53
- References for further study.   3-57
- Problems.   3-58

### Chapter 4. Photons

- 1-14    The photon as a particle.   4-1
- 15-22   The Compton effect; Bremsstrahlung; Pair creation  
          and annihilation.   4-20
- 23-42   Can Photons be split?   4-35
- References for further study.   4-57
- Problems.   4-60

Chapter 5. Material Particles

- 1-11 The de Broglie waves. 5-1
- 12-16 There is but one Planck's constant. 5-15
- 17-23 Can matter waves be split? 5-22
- 24-31 The wave equation and the superposition principle. 5-30
- 32-40 The uncertainty relations. 5-39
- 41-44 Advanced topic: The vector space of physical states. 5-51
- References for further study. 5-56
- Problems. 5-57

Chapter 6. The Quantum Mechanical Theory of Measurements

- 1-29 Measurements and statistical ensembles. 6-1
- 30-34 Is the outcome of every measurement predictable in principle? 6-38
- 35-36 Polarized and unpolarized light. 6-43
- References for further study. 6-48
- Problems. 6-49

Chapter 7. The Phenomenological Wave Mechanics of Schrödinger

- 1-11 Schrödinger's non-relativistic wave equation. 7-1
- 12-22 Some simple "barrier problems." 7-20
- 23-30 Theory of alpha-radioactivity. 7-40
- 31-32 Advanced topic: Normalization of the wave function. 7-53
- References for further study. 7-58
- Problems. 7-59

Chapter 8. Theory of Energy Levels

- 1-16 Quantization as an eigenvalue problem. 8-1
- 17-31 The harmonic oscillator. Vibrational and rotational excitations of molecules. 8-30
- 32-37 Hydrogen-like systems. 8-51
- 38-43 Advanced topic: The position and momentum operators in the Schrödinger theory. 8-60
- References for further study. 8-69
- Problems. 8-70

Chapter 9. The Problem of Describing Interactions

- 1-4 Particle interactions and the wave picture. 9-1
- 5-11 What is meant by a particle? 9-5
- 12-21 Basic ideas of quantum field theory. 9-15
- 22-31 Pions and nuclear forces. 9-27
- References for further study. 9-36

Appendix

- 1. Units and conversion factors. A-1
- 2. Physical constants. A-3
- 3. Crude values of physical constants to be memorized. A-5
