## VOLUME 1

### PART 1 SOME MATHEMATICAL METHODS

#### **Chapter 1 Vectors, Tensors and the Structure of Space 3**

- 1 Vector Algebra, 3
- 2 Vector Calculus, 12
- 3 Curvilinear Coordinates, Tensors, and Transformation Theory, 22
- 4 Riemannian and Other Space, 42
- 5 Linear Vector Spaces and Matrices, 45

### PART 2 MECHANICS, GRAVITATION, AND ELECTROMAGNETISM BEFORE 1900

#### **Chapter 2 Newton's Laws of Motion and the Law of Gravitation 65**

- 1 The Laws of Motion, 65
- 2 The Problem of Planetary Motion and the Discovery of Universal Gravitation, 72

#### **Chapter 3 Analytical Mechanics 88**

- 1 Conservation of Linear Momentum, Angular Momentum, and Energy, 88
- 2 Lagrange's Equations, 91
- 3 Hamilton's Principle, 97
- 4 Hamilton's Equations, 101

5	Canonical Transformations and Poisson Brackets,	103
6	The Hamilton-Jacobi Equation and Action-Angle Variables,	110
<b>Chapter 4</b>	<b>Oscillatory Motion</b>	<b>119</b>
1	Normal Coordinates,	119
2	Forced Oscillations,	128
3	Nonlinear Oscillations,	130
<b>Chapter 5</b>	<b>Mechanics of a Rigid Body</b>	<b>134</b>
1	Kinematics,	134
2	Motion in a Rotating Coordinate System,	140
3	Rigid Body Dynamics,	144
<b>Chapter 6</b>	<b>Mechanics of Continuous Media</b>	<b>148</b>
1	Conservation Equations,	148
2	Gas Dynamics and Sound Waves,	153
3	Elastic Solids,	156
4	Shock Waves,	159
5	Subsonic and Supersonic Flow,	163
<b>Chapter 7</b>	<b>Classical Fields</b>	<b>171</b>
1	The Newtonian Gravitational Field,	171
2	The Electromagnetic Field,	183
3	Electrostatics,	191
4	Magnetostatics,	194
<b>Chapter 8.</b>	<b>Electromagnetic Waves and Radiation</b>	<b>200</b>
1	Electromagnetic Waves in Free Space,	200
2	Waves in a Dispersive Medium,	203
3	Magnetohydrodynamics,	210
4	Radiation,	216
	<b>Prologue</b>	<b>227</b>

PART 3    RELATIVITY

<b>Chapter 9</b>	<b>The Principle of Relativity</b>	<b>233</b>
	1 Relativity Before Einstein, 233	
	2 Einstein's Special Theory of Relativity, 238	
	3 Some Consequences of the Lorentz Transformation, 245	
<b>Chapter 10</b>	<b>Relativistic Electrodynamics and Mechanics</b>	<b>255</b>
	1 Relativistic Electrodynamics, 255	
	2 Relativistic Particle Mechanics, 262	
	3 Relativistic Continuum Mechanics, 271	
	4 Interaction of a Particle with Its Own Field, 275	
<b>Chapter 11</b>	<b>The General Theory of Relativity</b>	<b>284</b>
	1 The Principle of General Covariance, 284	
	2 The Principle of Equivalence, 291	
	3 Einstein's Law of Gravitation, 295	
<b>Chapter 12</b>	<b>Some Consequences of the General Theory of Relativity</b>	<b>302</b>
	1 The Spherically Symmetric Gravitational Field, 302	
	2 Experimental Test of the Theory, 310	
	3 Action Principle, Equations of Motion, and the Energy-Momentum Pseudotensor, 319	
	4 Gravitational Waves, 326	
	5 Cosmological Problems, 330	
<b>Chapter 13</b>	<b>Unified Field Theories and Other Modifications of the General Theory of Relativity</b>	<b>340</b>
	1 Weyl's Gauge-Invariant Geometry, 341	
	2 Finsler Space and Five Dimensional Theories, 346	
	3 Nonsymmetric Field Theories of Einstein, and Schrödinger, 350	
	4 Geometrodynamics, 352	
	5 Theories That Take Mach's Principle into Account, 359	

**xiv Contents**

**Appendix Fourier Series, Integral Transforms, and  
Generalized Functions 364**

**Combined Index 11**

**VOLUME 2**

**PART 4 QUANTUM THEORY**
