<i>Foreword</i>	xiii
<i>Acknowledgements</i>	xvii
Introduction and Summary: The Birth of a Paradigm from a Metafluctuation	1
A time of self-renewal	1
The self-renewal of science	3
Summary of contents	9
PART I	
SELF-ORGANIZATION: THE DYNAMICS OF NATURAL SYSTEMS	19
1. Macroscopic Order	21
Overcoming reductionism	21
Three levels of inquiry in physics	24
Symmetry-breaking as a source of order	27
2. Dissipative Structures: Autopoiesis	29
Spontaneous structuration	29
A hierarchy of characteristic system aspects	32
Characteristics of dissipative structures	35
Self-reference and environment	36
3. Order through Fluctuation: System Evolution	42
Evolutionary feedback	42
The role of fluctuations: the micro-aspect	44
Macroscopic indeterminacy	47
Novelty and confirmation	50
System dynamics and history	53
4. Modelling Self-organizing Systems	55
Homologous dynamics of natural systems	55

Catastrophe theory as alternative	57
Physical-chemical systems	59
Biological systems	59
Sociobiological systems	62
Ecological systems	64
Sociocultural systems	69
PART II	
CO-EVOLUTION OF MACRO- AND MICROCOSMOS: A HISTORY OF REALITY IN SYMMETRY BREAKS	75
5. Cosmic Prelude	77
Evolution as a symmetry-breaking process	77
The asymmetrical origin of matter	79
Symmetry break between physical forces: The unfurling of the space-time continuum for the unfolding of evolution	82
Interlude: Structuration by condensation	85
Self-organization of cosmic structures	87
Matter transfer and cosmic "phylogeny"	92
The arrow of cosmic time	94
6. Biochemical and Biospherical Co-evolution	97
Energy flow as a trigger for chemical evolution	97
Prebiotic self-organization: Dissipative structures and hyper- cycles	99
Linear self-reproduction—the vertical aspect of genetic com- munication	102
Horizontal genetic communication—the stage of prokaryotic cells	106
The build-up of an oxygen-rich atmosphere—life itself creates the conditions for its further evolution	110
Gaia—the planetary self-organizing system of bio- and atmo- sphere	115
7. The Inventions of the Microevolution of Life	121
Emergence of the eukaryotic cell from symbiosis	121
Sexuality	125
Heterotrophy—life feeds on life	127
The urge toward multicellularity	128
The difficult balance between novelty and confirmation	131
8. Sociobiology and Ecology: Organism and Environment	135
A clarification concerning the terminology	135
Optimal utilization of energy	136

Macrodynamics of life	139
The feedback loop between organism and environment— epigenetics and macroevolution	143
Epigenetics and microevolution	147
Manipulation of history in long-range evolutionary strategies	150
Man as a product of epigenetic evolution	153
Sociobiological evolution in the direction of individuation	155
9. Sociocultural Evolution	157
The dynamic unfurling of biological communication	157
Neurons, the specialists of fast communication	158
Mind as dynamic principle	162
The evolution of the “triune brain”	165
Autopoietic levels of mentation	169
Language	172
The sociocultural re-creation of the world	174
Complementarity of subjectivity and objectivity	177
Evolutionary opening by creative mind	179
PART III	
SELF-TRANSCENDENCE: TOWARD A SYSTEM THEORY OF EVOLUTION	183
10. The Circular Processes of Life	185
Cyclical organization—the system logic of dissipative self-organization	185
A hierarchical typology of self-organizing systems	186
Autopoietic, self-regenerative systems	188
Systems with growth dynamics	191
Co-evolution of cyclical system organization	194
11. Communication and Morphogenesis	197
A generalized scheme of types of communication	197
The development of memory	200
Epigenealogical process—dissipative and conservative principles in interaction	201
Symbiosis	202
Communication in the major phases of the co-evolution of macro- and microcosmos	207
The cosmic connection	211

12. The Evolution of Evolutionary Processes	217
System dynamics in macroscopic and microscopic perspective	217
The emergence of complexity	218
Metaevolution in symmetry breaks	222
Hierarchical securing of openness	227
13. Time- and Space-binding	231
Mutual correspondence of space and time in communication	231
The fine-structure of time	232
The steps of time- and space-binding in evolution	234
Interpretation: the evolutionary "purpose"	236
14. Dynamics of a Multilevel Reality	239
Multilevel autopoiesis	239
Hierarchically co-ordinated dynamics	243
Not control hierarchy, but stratified autonomy	247
PART IV	
CREATIVITY: SELF-ORGANIZATION AND THE HUMAN WORLD	251
15. Evolution—Revolution	253
Gradual change, manipulation or evolutionary fluctuation?	253
Metastability of institutions	255
From quantum jumps to "gliding" evolution?	256
Cultural pluralism and autonomy of the systems of human life	259
16. Ethics, Morality and System Management	263
Multilevel ethics	263
Time- and space-binding in planning	266
Opening up "at the top"	267
Process planning instead of structural planning	271
The complementarity of values	272
17. Energy, Economy and Technology	275
Time-binding in the exploitation of energy sources	275
Energy-intensive economy	278
Economy, environment and consciousness	282
18. The Creative Process	286
Self-organization, art and the experience of art	286
Open science	290
On the revolving stage of consciousness	291

19. Dimensions of Openness	297
Intensity, autonomy and meaning—the dynamic measures of evolutionary progress	297
Immediacy of existence	300
The suspension of historical time	302

EPILOGUE

Meaning	307
