## Part I Theory of the electromagnetic field

### *Chapter 1 General theory of the electromagnetic field*

§ 1	Problems of theoretical physics	1
2	The determination of the vector field from its integral characteristics	3
3	Charges and particles	9
4	The field of charges at rest	11
5	The equation of continuity	16
6	The electromagnetic field of charges moving with a constant velocity	18
7	The electromagnetic field of moving charges. The general case	23
8	Maxwell–Lorentz system of equations	28
9	The displacement current	30
10	The electromagnetic field potentials	34
11	Gauge invariance of the potentials	37
12	Energy conservation law of the electromagnetic field	40
13	Momentum conservation law of the electromagnetic field	44

### *Chapter 2 The electrostatic field*

14	The electrostatic field	49
15	The electrostatic field of a system of point charges	52
16	Quadrupole moment	57
17	Work and energy in an external electrostatic field	62
18	The interaction energy of a system of charges and the electrostatic field energy	65

*Chapter 3 The quasistationary magnetic field*

§19	The field of a system of charges undergoing a slow quasistationary motion	69
20	The field of a point charge undergoing a slow uniform motion	76
21	The field of a system of charges undergoing quasistationary motion at a large distance from the system	79
22	The magnetic moment	82

*Chapter 4 The electromagnetic field of arbitrarily moving charges*

23	The electromagnetic field of a system of arbitrarily moving charges	85
24	General solution of D'Alembert's equation in the form of retarded potentials	94
25	The field of a point charge moving arbitrarily	102

*Chapter 5 Radiation theory*

26	The potentials of the electromagnetic field at a large distance from the emitter in the dipole approximation	106
27	The electromagnetic field of dipole radiation at a large distance from the emitter	112
28	Dipole radiation of simple systems	116
29	Radiation reaction	121
30	Line width of emitted radiation	125
31	Quadrupole and magnetic dipole radiation	129
32	General case of electromagnetic radiation. The spectral decomposition of fields. The radiation zone and induction zone. Effect of the proper retardation	134

*Chapter 6 Electromagnetic field in a vacuum and electromagnetic wave scattering*

33	The propagation of electromagnetic waves at a large distance from the emitter	142
34	Plane wave polarization	149
35	Interference and the formation of wave packets	152
36	Scattering of the electromagnetic waves by a free charge and by a bound electron	157
37	Absorption of radiation	162
38	Canonical form of the field equations	164

*Chapter 7 The motion of particles in electromagnetic fields*

§ 39	The motion of charged particles in constant electric and magnetic fields	174
40	The motion of charged particles in slowly varying magnetic fields	182
41	The Lagrangian and Hamiltonian for a particle moving in an electromagnetic field	187
42	The motion of a system of two charged particles and the radiation from them	189
43	The scattering of particles and associated bremsstrahlung	196

**Part II      Theory of relativity***Chapter 1 General principles of the theory of relativity*

§ 1	The creation and significance of the theory of relativity	215
2	Galilean transformations	216
3	Attempts to determine an absolute velocity	219
4	Postulates of the Einstein theory of relativity	222
5	The Lorentz transformation	224
6	Consequences of the Lorentz transformation. Space and time intervals	228
7	Einstein's law of addition of velocities and angular transformations	234
8	Simultaneity, short-range action and action at a distance	237
9	Absolute values in the theory of relativity. Intervals and proper time	238
10	The invariance of physical laws under Lorentz transformations. Four-dimensional formulation of the theory of relativity	242
11	Four-dimensional vectors and tensors. Four-dimensional velocity and acceleration	248

*Chapter 2 Relativistic mechanics*

12	The dynamical equations of a material point	256
13	Momentum, energy and mass in relativistic mechanics	260
14	Lagrange's equations; the Lagrangian and Hamiltonian	267

§ 15	The mechanics of a system of particles in the theory of relativity	268
16	The energy-momentum conservation law in nuclear physics	274
17	The theory of collisions between relativistic particles. Compton effect	286
 <i>Chapter 3 Relativistic electrodynamics</i>		
18	Charge conservation, the four-dimensional current and the equation of continuity	292
19	The relativistically invariant formulation of the equations of the electromagnetic field potentials	294
20	The field of a moving charge	296
21	The electromagnetic field tensor and Maxwell's equations	304
22	Some applications: Doppler effect. Mössbauer effect, observation of rapidly moving bodies, transformation of angles, intensities and cross sections	307
23	The Lorentz force; the Lagrangian and the Hamiltonian for a particle moving in an electromagnetic field	325
24	The motion of particles in constant electric and magnetic fields	331
25	A system of weakly interacting charged particles	340
26	The radiation emitted by a moving charge	350
Appendix I Vector analysis		356
Appendix II The Fourier integral		375
Appendix III The delta-function and its properties		379
Subject index		387
