

Contents of Volume 4

Part VI Quantum statistics and physical kinetics

Chapter 1 Quantum statistics

§ 1	The density matrix and the statistical operator	3
2	The statistical distribution in quantum statistics	7
3	Statistical distributions in an ideal gas	15
4	Degenerate ideal Bose gas	18
5	Imperfect Bose gas. Superfluidity	24

Chapter 2 Physical kinetics

6	Phenomenological transport equations and the general equations of kinetics	33
7	The mass conservation law and diffusion flow	36
8	The momentum conservation law and the equations of motion for a continuous medium	40
9	The energy conservation law and entropy transport in a moving continuous medium	44
10	The Fokker–Planck equation	50
11	The basic kinetic equation	58
12	Discussion of the basic kinetic equation and some simple examples	64
13	Non-equilibrium systems with a negative temperature. The amplification of electromagnetic waves by such systems	68

Chapter 3 The kinetic theory of gases and gas-like systems

14	Boltzmann's kinetic equation	72
15	The basic kinetic equation for correlation functions	79
16	The derivation of Boltzmann's equation from the basic kinetic equation	83

§17	The generalized transport equation and the properties of summational (additive) invariants	90
18	The equations of motion of a continuous medium	93
19	The laws of increase of entropy	99
20	Equilibrium and local-equilibrium distributions in an ideal gas	101
21	The general theory of the solution of Boltzmann's equation	106
22	The equations of hydrodynamics. The viscosity and thermal conductivity of gases	113
23	Relaxation time	123
24	The diffusion of an admixture of a gas of light particles into a gas of heavy particles	126
25	Thermal diffusion in gases	133
26	The dispersion of sound	136
27	The linearized Boltzmann's equation for quasi-gaseous systems	138
28	The solution of Boltzmann's equation for a quasi-gaseous system in an external force field	142
29	The kinetic equation for polyatomic gases	145
30	The moderation of fast neutrons	151
31	The spatial distribution of neutrons	161
32	Kinetic equation for a plasma disregarding collisions	166
33	The dispersion and damping of plasma waves	169
34	The kinetic equation for a plasma taking into account collisions	179
35	The establishment of equilibrium in an electron—ion plasma	185
 <i>Chapter 4 The time correlation function method and Onsager's theory</i>		
36	The response of a system to an external dynamic perturbation. Classical calculation	190
37	The response of a system to an external dynamic perturbation. Quantum calculation	197
38	The response of a system to a thermal perturbation	199
39	The calculation of kinetic coefficients. The connection with Boltzmann's equation	204
40	Onsager's theory	208
41	Discussion of Onsager's relations	213
42	Non-equilibrium processes in one-component systems	215

§43	Non-equilibrium processes in many-component systems (diffusion, thermodiffusion, thermoelectric effects)	220
44	Fluctuation-dissipation theorem	225

Chapter 5 Solid-state theory

45	A solid body as a quantum-mechanical system	229
46	The crystal lattice	232
47	Lattice vibrations	235
48	Wave function of an electron moving in a periodic field	241
49	The energy spectrum of an electron moving in a periodic field	244
50	A system of electrons in a solid	260
51	Models of a metal, a semiconductor and a dielectric	269
52	Magnetic properties of metals. The paramagnetism of an electron gas	271
53	The diamagnetism of an electron gas	275
54	Ferromagnetism	281
55	The interaction of electrons with lattice vibrations	287
56	The total Hamiltonian of a solid	294

Chapter 6 The kinetic properties of solids

57	The kinetic equation for electrons in metals	299
58	The electrical conductivity of metals	302
59	The Hall effect	305
60	The optical properties of a system of conduction electrons	310
61	The photoelectric effect	312
62	The mean free path length of electrons in metals	317
63	The collision integral for electrons in a metal	326
64	A solution of the kinetic equation	329
65	Superconductivity	334
66	Theory of the Fermi fluid	344
67	Electrons in dielectric crystals	351
68	The energy spectrum and the distribution function of electrons in semiconductors	355
69	The electrical conductivity and the Hall effect in semiconductors	362

*Chapter 7 Interaction of radiation with a free-electron gas**

§ 70	Low-density plasma in a low-frequency radiation field	365
71	Kinetic equations for electrons and photons	371
72	Kinetics of Bose condensation in a photon gas	376
73	Mobility of an electron in a radiation field	380
74	System of electrons in an arbitrary radiation field	386
75	General discussion of the results and range of the applicability of the theory	388
Subject index		395
