

CONTENTS

PREFACE	v
1. PRELIMINARY SURVEY OF REALITY	1
Introductory Remarks	1
The Enduring	3
The Thing-like	5
The Efficacious	9
Summary	10
2. WAYS OF ARRIVING AT REALITY	12
Metaphysics of Natural Science	12
Sciences vs. Humanities	16
Classification of the Sciences	18
Marxism and Science	20
Comte's Classification	24
Correlation vs. Theoretical Explanation	25
Summary	30
3. WHAT IS IMMEDIATELY GIVEN?	33
The Scientist as Spectator of the Given	33
The Mechanistic View of Nature	35
Mechanism in Need of Repair	36
The Breakdown of Mechanism	39
The Theory of Auxiliary Concepts	44
The Given Is Internal, Not External to Experience	46
Sense Data	49
Summary	51
4. DEPARTURE FROM THE IMMEDIATE; CONSTRUCTS	54
The Continuity between the Spontaneous and the Reflexive	54
The Haziness of the Immediately Given	56
The Passage from Data to Orderly Knowledge	57
Rules of Correspondence	60
Constructs	69
Summary	72

5. METAPHYSICAL REQUIREMENTS ON CONSTRUCTS	75
Constructs Are Not Wholly Determined by Perception	75
Science and Metaphysics	78
The Requirement of Logical Fertility (A)	81
The Requirement of Multiple Connections (B)	84
The Requirements of Permanence and Stability (C)	88
The Requirement of Extensibility of Constructs (D)	90
The Requirement of Causality (E)	94
Simplicity and Elegance (F)	96
Summary	99
6. EMPIRICAL CONFIRMATION	102
The Circuit of Empirical Confirmation	102
The Meaning of Agreement between Theory and Observation	107
Measures of Precision	110
The Normal Error Curve	114
Can Errors of Observation Be Reduced Indefinitely?	116
Summary	121
7. SPACE AND TIME	123
Space, Time, and Reality	123
The Uniqueness of Space Aside from Objects	125
The Spatial and Temporal Qualities of Perception	129
Measurement of Space	131
Measurement of Time	136
Conceptual Space and Time	139
Kant's Time and Space	144
Einstein and Minkowski	149
Absolute vs. Relational Space. Dimensions	153
Continuity of Space and Time	155
Time's Arrow	159
Are Time and Space Infinite?	163
Summary	164
8. SYSTEMS, OBSERVABLES, AND STATES	167
Does Science Describe or Explain?	167
The Framework of Physical Description	171
Summary	177
9. PHYSICS OF DISCRETE SYSTEMS	178
The Method of Mechanics	178
Newton's Mechanics	180
Integral Principles	184

Many-particle Systems	187
Mechanics of Rigid Bodies	191
Summary	193
10. PHYSICS OF CONTINUA	194
Mechanics of Continua	194
Electromagnetic-field Theory	198
Summary	205
11. THERMODYNAMICS	207
The Method of Thermodynamics	207
The Principles of Thermodynamics	211
Looking Back and Forward	218
Summary	219
12. THE ROLE OF DEFINITIONS IN SCIENCE	220
On the Uniqueness of Definitions	220
The Definition of Force	223
The Empiricist's Approach	226
Constitutive vs. Epistemic Definitions	232
Brief Survey of Epistemic and Constitutive Definitions in Physics and Mathematics	236
The Interplay between Definitions and the A Priori	240
Summary	242
13. PROBABILITY	245
Probability and Inductive Logic	245
Probability Is a Measurable Physical Quantity	250
Two Modes of Defining Probability	252
Laplace's Rule and Its Shortcomings	256
The Frequency Definition and Its Shortcomings	259
The Synthetic View	264
Summary	266
14. STATISTICAL MECHANICS	268
The Problem of Explanation in Statistical Mechanics	268
The Theory of Gibbs	273
Other Types of Statistical Mechanics	277
Statistics and Ignorance	280
Summary	285
15. REALITY: A FIRST OUTLINE	287
Nonphysical Realities	287
Reality Defined	290

The Reality of Data; Other Selves	297
The Real World	299
Summary	305
16. THE BREAKDOWN OF PHYSICAL MODELS	307
The Crisis of Classical Mechanics	307
Dualism between Waves and Particles	313
The Fundamental Nature of Elementary Particles and the Haziness of the Immediately Given	320
Where Is the Electron?	323
Summary	327
17. BASIC IDEAS OF QUANTUM MECHANICS	329
Orientation	329
Operators, Eigenfunctions, and Eigenvalues	331
Axiom 1. Observables and Operators	334
Axiom 2. States and Functions	337
Axiom 3. The Empirical Meaning of Eigenvalues	338
Axiom 4. The Empirical Meaning of States and Eigen- states	343
Generalizations	349
Axiom 5. Quantum Dynamics	352
Summary	354
18. UNCERTAINTY AND MEASUREMENTS	356
The Uncertainty Principle	356
Limiting Cases of the Uncertainty Principle	361
Examples of Uncertainty	362
What Is a Measurement?	369
Compatibility of Measurements	375
Measurements and Eigenstates	377
Von Neumann's Theory of Mixtures and Pure Cases	380
Classical Mechanics as the Limiting Form of Quantum Mechanics	383
Summary	387
19. CAUSALITY	389
Total and Partial Causes	389
History of the Problem of Causality	394
Laplace's Demon	397
Causality and Prediction	400
Causality as Temporal Invariability of Laws	403
Causal Necessity, etc.	405

CONTENTS	xiii
Causality, Conservation Laws, Relativity	410
Causality in Other Disciplines	412
Causation in Biology	415
Causality in Quantum Physics; Complementarity	418
Cause and Purpose	422
Summary	425
20. THE EXCLUSION PRINCIPLE	427
Its Origin and Function	427
Statement of the Exclusion Principle	428
Mathematical Formulation	431
Consequences of the Exclusion Principle; Quasi Forces	434
Generalizations and Limitations	437
The "Identity" of Electrons	440
Exclusion and Biological Organization	442
Summary	446
21. THE CONTOURS OF REALITY	448
A Résumé	448
Reality in Quantum Physics	452
Why Not Simple Realism?	454
Other Kinds of Reality	458
Physical Reality and Values	463
NAME INDEX	469
SUBJECT INDEX	475
