

# Table of Contents

<i>Preface</i>	9
Chapter 1 Introduction	11
1.1 The Purpose of Measurement	11
1.2 The Form of Expressions for Physical Magnitudes	11
1.3 'Physical Algebra'	12
1.4 Scalar and Vector Quantities	15
1.5 Symbols for Vector Quantities	17
Chapter 2 Newton's Definitions and Laws of Motion	18
2.1 Newton Interpreted	18
2.2 Newton's Second Law in Modern Mechanics	21
2.3 Mass and Weight	22
Chapter 3 Units—Their Nature and Magnitude	26
3.1 Base Units and Derived Units	26
3.2 The Principal Units of Mechanics	27
3.2.1 Units of length	27
3.2.2 Base units of mass	29
3.2.3 Unit of time interval	30
3.2.4 Units of force and derived units of mass	30
3.2.5 Differences between US and 'Imperial' units	34
3.2.6 Summary	34
3.3 Some Other Units of Mechanics	35
3.4 Units of Angle	36
3.5 Units for Thermal Quantities	37
3.5.1 The thermodynamic definition of the magnitude of temperature	38
3.5.2 Practical scales of temperature	43
3.5.3 Units for quantity of heat	44
3.6 Units for Electric and Magnetic Quantities	46
3.6.1 The c.g.s. electrostatic system of units	46
3.6.2 The c.g.s. electromagnetic system of units	47
3.6.3 The practical system of units	49
3.6.4 The international MKSA system of units	50
3.6.5 Rationalized Equations	51
3.7 Units for Quantities connected with Illumination	52
3.8 Units for Amount of Substance	53
Chapter 4 The Système International d'Unités	55
4.1 Introduction	55
4.2 Prefixes and Conventions in Printing	56

Chapter 5	Conversion Factors	59
Chapter 6	Precision of Results	66
6.1	Introduction	66
6.2	Types of Error	66
6.2.1	Accuracy and precision	68
6.3	Minimizing the Effect of Errors	68
6.4	Propagation of Errors in Calculations	69
6.4.1	Error in a sum or difference	69
6.4.2	Error in a product	70
6.4.3	Error in a quotient	71
6.4.4	Errors in less simple expressions	71
6.5	Dispersion of Magnitudes in a Set	73
6.5.1	Standard deviation	73
6.5.2	Probability	74
6.5.3	The normal distribution	76
6.5.4	Standard errors	79
6.5.5	Propagation of random errors in calculations	80
6.6	Principle of Least Squares; Weighted Means	85
6.7	Best Fit of Lines to Graph Points	87
6.7.1	Fitting non-linear curves	91
6.8	Significant Figures	91
6.8.1	Rounding off	92
6.9	Numerical Integration	94
6.10	Interpolation	95
6.10.1	Inverse interpolation	99
6.10.2	Interpolation with unequally-spaced data	99
Chapter 7	The Form of Expressions in Physical Algebra	102
7.1	Types of Magnitudes and Equations	102
7.2	The Nature of Dimensional Formulae	104
7.3	Dimensional Homogeneity	106
7.4	Dimensional Analysis	108
7.4.1	The process of analysis	108
7.4.2	Rayleigh's method	110
7.4.3	The 'Pi' theorem	118
7.4.4	'Step-by-step' method	125
7.4.5	Reducing the number of $\Pi$ s	127
7.5	Dimensional Formula of Plane Angle	131
7.6	Dimensional Formulae for Thermal Quantities	135
7.7	Dimensional Formulae for Electric and Magnetic Quantities	140
7.7.1	Dimensional formulae for electric quantities	141
7.7.2	Dimensional formulae for magnetic quantities	141
7.7.3	Examples of dimensional analysis with electric and magnetic quantities	143
7.8	Equations Simplified by Dimensionless Parameters	148
7.9	Closing Remarks on Dimensional Analysis	150
Chapter 8	Physical Similarity	154
8.1	Introduction	154

8.2	Types of Physical Similarity	155
8.2.1	Geometric similarity	155
8.2.2	Kinematic similarity	156
8.2.3	Dynamic similarity	156
8.2.4	Other kinds of similarity	156
8.3	Mathematical Expression of Similarity Requirements	157
8.4	Named Dimensionless Parameters	158
Appendix 1	Symbols, Dimensional Formulae and Units for Principal Physical Quantities	195
Appendix 2	Approximate Values of some Physical Constants and Common Properties	201
Appendix 3	Elements, Atomic Numbers, and Relative Atomic Masses	203
Appendix 4	Some Other Units used in Scientific Work	206
	Further Reading	210
	List of Unit Symbols	211
	Index	213
