<b>Part I PHYSICS OF THE MACROSCOPIC WORLD</b>	<b>1</b>
<b>Chapter 1 PRINCIPLES OF CLASSICAL MECHANICS</b>	<b>3</b>
1–1 Newton’s Mechanics	4
1–2 Two-Body, Many-Body Problems	6
1–3 Kinetic and Potential Energies	8
1–4 Generalized Coordinates	12
1–5 Lagrange’s Equations	14
1–6 Canonical Momenta	16
1–7 Hamiltonian Function. Hamilton’s Equations	17
1–8 Poisson’s Brackets	19
1–9 Constants of Motion and Symmetry	22
1–10 Hamilton’s Principle	23
1–11 The Principle of Least Action	25
1–12 Canonical Transformations	28
1–13 Hamilton’s Principal Function. Hamilton–Jacobi Equations	32
Additional Problems	34
<b>Chapter 2 SIMPLE HARMONIC OSCILLATORS. NORMAL VIBRATIONS</b>	<b>39</b>
2–1 Simple Harmonic Oscillator	40
2–2 Damped Harmonic Oscillators	43
2–3 Forced Harmonic Oscillator. Resonance	46
2–4 Two Coupled Oscillators	48
2–5 Normal Coordinates	51
2–6 Secular Equation	53

---

2-7	Linear Molecule	58
	Additional Problems	62
Chapter 3	CONTINUOUS BODY, RIGID BODY, AND ROTATING FRAME	65
3-1	Vibrating String	66
	Boundary and Initial Conditions	68
3-2	String with Variable Tension	70
3-3	Continuous Body. Equation of Continuity	71
3-4	Stress Tensor	75
3-5	Strain. Elastic Constants	78
3-6	Isotropic Elastic Body	79
3-7	Elastic Waves	82
3-8	Ideal Fluids	84
3-9	Viscous Flow	86
3-10	Lagrangian Density	88
	Hamiltonian Density	90
	Poisson Bracket Density	92
	Rigid Body and Rotating Frame	
3-11	Kinetic Energy of a Rigid Body. Inertia Tensor	92
3-12	Angular Momentum of a Rigid Body	96
3-13	Free Rotation of a Rigid Body	97
3-14	Euler's Equations of Motion for a Rigid Body	99
3-15	Equation of Motion in a Rotating Frame	101
	Additional Problems	102
Chapter 4	SPECIAL THEORY OF RELATIVITY	107
4-1	Absolute Space. Mach's Principle	109
4-2	Inertial System	110
4-3	Lorentz Transformations	111
4-4	Covariant and Contravariant Components	113
4-5	Lorentz Transformation Matrices	115
4-6	Special Lorentz Transformations	116
	Time Dilation and Lorentz Contraction	120
	Velocity Addition Rule	121
4-7	Vectors, Tensors, Spinors	122
4-8	Relativistic Equation of Motion	126
4-9	Relativistic Lagrangian and Hamiltonian Functions	129
4-10	Lagrangian Density. Stress-Energy Tensor	131
4-11	Mass Density. Stress-Energy Tensor of Dust, Ideal Fluid, and Ideal Gas	135
	Additional Problems	139
Chapter 5	ELECTROMAGNETIC FIELDS	141
5-1	Coulomb's Law of Electrostatic Force	142
5-2	Electric Field	144
5-3	Scalar Potential. Poisson's Equation. Green's Function	147
5-4	Solutions of Laplace's Equation I	150

5–5	Solutions of Laplace's Equation II Cylindrical Functions Spherical Functions	153 153 156
5–6	Magnetic Field	160
5–7	Lorentz Force	166
5–8	Magnetic Moment	169
5–9	Faraday's Law of Induction. Maxwell's Equations	171
5–10	Microscopic and Macroscopic Fields	173
5–11	Macroscopic Susceptible Media Electric Susceptibility Magnetic Susceptibility	174 174 178
5–12	Electromagnetic Plane Wave	181
5–13	Huygens' Principle	186
5–14	Diffraction Fraunhofer Diffraction Fresnel Diffraction	189 190 192
5–15	Eikonal Equation. Fermat's Principle Additional Problems	195 197
Chapter 6 CLASSICAL THEORY OF RADIATION 203		
6–1	Vector Potential. Lorentz Gauge	205
6–2	Covariant Formalism of Electromagnetic Fields	207
6–3	Lagrangian Density of Electromagnetic Fields	210
6–4	Stress-Energy Tensor of Electromagnetic Fields	211
6–5	Hamiltonian of a Particle-Field System	214
6–6	Energy Transfer between Particle and Field	217
6–7	Plane Wave	219
6–8	Interaction of a Plane Wave With Free and Bound Charged Particles	221
6–9	Retarded and Advanced Green's Functions	224
6–10	Liénard–Wiechert Potentials	230
6–11	Electromagnetic Fields Due to a Moving Charge	233
6–12	Emission and Scattering of Radiation Bremsstrahlung Radiation by a Simple Harmonic Oscillator Thomson Scattering Scattering by a Bound Charge	235 235 237 237 238
6–13*	Retarded Potentials at Short Distances	240
6–14*	Self-energy of an Electron	242
6–15*	Self-force Additional Problems	245 248
Chapter 7* GENERAL THEORY OF RELATIVITY 257		
7–1	Gravitational Force	258
7–2	Einstein's Equivalence Principle	259
7–3	Free Particle in General Space–Time	260
7–4	Transformations in General Relativity	262

7-5	Covariant Derivative	265
7-6	Some Useful Mathematical Formulas	269
7-7	Riemann Tensor, Ricci Tensor, and Einstein Tensor	270
7-8	Hamilton's Principle. Stress-Energy Tensor Stress-Energy Pseudotensor	273 276
7-9	Einstein's Equations and Their Linear Limit	276
7-10	Gravitational Wave	280
7-11	Schwarzschild Solution	283
7-12	Experimental Tests of General Relativity	286
7-13	Homogeneous Model Universe	290
7-14	Cosmological Theories Einstein Model De Sitter Model Dynamic Models with $\Lambda = 0, P = 0$ Additional Problems	293 293 296 297 300
<b>Part II PHYSICS OF THE MICROSCOPIC WORLD</b>		<b>303</b>
Chapter 8	QUANTUM MECHANICS	305
8-1	Hilbert Space Vector Space Norm. Inner Product Hilbert Space	306 306 306 307
8-2	Hermitian Operators and Their Eigenfunctions and Eigenvalues Eigenfunctions, Eigenvalues Orthogonality	308 309 310
8-3	Wave Functions	313
8-4	Commutators	315
8-5	Uncertainty Relations	319
8-6	Schroedinger Equation (Wave Mechanics)	324
8-7	Classical Approximation. WKB Solution	328
8-8	de Broglie Wave Reflection and Transmission of de Broglie Wave	334 336
8-9	Simple Harmonic Oscillators Creation Annihilation Operators Coupled Oscillators	340 341 343
8-10*	Two Theorems Concerning Eigenfunctions of $\hat{H}$ in One-Dimensional Problems	346
8-11	Matrix Representatives Bra and Ket Matrix Representatives	349 349 350
8-12	Unitary Transformations	353
8-13	Reduction of Matrix Representatives Using Commuting	

	Operators: Group Theory	356
8–14	Perturbation Method	359
	First-Order Perturbation	360
	Projection Operator. Green's Operator (Resolvent). Space Contraction Operator	360
	Third-Order Perturbation	362
	Fifth-Order Perturbation	364
	Degenerate Case	365
	Perturbation Series	366
8–15	Time-Development Operator. Schroedinger, Heisenberg, and Interaction Pictures	373
8–16	Transition Probability	376
	Dyson Series	381
	Additional Problems	385
Chapter 9	ONE PARTICLE IN A POTENTIAL	391
9–1	Hydrogen Atom and Hydrogen-like Ions. I	392
9–2	Hydrogen Atom and Hydrogen-like Ions. II	394
9–3*	Coulomb Scattering	400
	Bound States	403
9–4	Scattering by a Potential	405
	Optical Theorem	409
9–5	Partial Waves	411
9–6	Bound States	415
9–7	Phase Shifts	418
9–8*	Resonance Scattering. The Dispersion Relation	422
9–9	Scattering of Electromagnetic Wave. The Complex Polarizability	426
9–10	Causality and Kramers–Kronig Relation	430
	Additional Problems	433
Chapter 10	RELATIVISTIC QUANTUM MECHANICS	435
10–1	Klein–Gordon Equation	436
	$\lambda$ Operator	437
	Equation of Continuity	438
10–2	Plane Wave Solution of the Klein–Gordon Equations	441
	Antiparticle. Charge conjugation. (Klein–Gordon Theory)	442
10–3*	Klein–Gordon Equations with Electromagnetic Fields	444
	Hydrogen-like Ions	445
	Zeeman Effect	447
10–4	Spin Angular Momentum	449
10–5	Dirac Equation	451
10–6*	Bilinear Covariants. Space Inversion	454
	Space Inversion. Parity Operator	457
10–7*	Charge Conjugation. (Dirac Theory)	460

10–8*	Time Reversal	463
	Kramers' Theorem	465
10–9*	Neutrinos	467
10–10	Total Angular Momentum	472
	Eigenvalues of $j^2$ and $j_z$	473
10–11	Clebsch–Gordan Coefficients	479
10–12	The Hydrogen Atom and Hydrogen-like Ions. (Dirac Theory)	484
	Equations for $F(r)$ and $G(r)$ Functions	486
	Energy Levels	489
10–13*	Zeeman Effect of a Hydrogen-like Ion	497
10–14*	Magnetic Dipole Hyperfine Structure	503
10–15	Relativistic Corrections	508
	Additional Problems	513
 Chapter 11 GROUP THEORY IN QUANTUM MECHANICS		 517
11–1	Symmetric Groups $\mathcal{S}_2$ and $\mathcal{S}_3$	518
11–2	Representations. (Matrix Groups)	522
11–3*	Schur's Lemma	528
11–4	Characters. Classes	533
	Classes	535
	Young Diagrams	536
	Reduction of a Representation Using Character Tables	538
11–5	Symmetry Groups of $\hat{H}$	542
11–6	The Pauli Principle and Nonrelativistic Atoms and Molecules	544
	Nonrelativistic Atoms and Molecules	545
	Direct Product Representation	546
11–7	Spin Functions in Symmetric Groups	549
11–8	Rotation Group $R_3$	555
11–9	Irreducible Representations and Characters of $R_3$	559
	Rotation Group and an Atom	561
11–10	Atomic Shell Model	564
	Coupling of Orbital Angular Momenta	567
	Hund's Rules	571
11–11	Rotations Including Spin and the $SU_2$ Group	573
	Lie Groups	577
11–12	Tensor Operators. Wigner Symbols	578
	Clebsch–Gordan Coefficients	579
	Tensor Operators	579
	Wigner–Eckart Theorem	581
	Wigner Symbols	582
11–13	Nuclear Potential in Yukawa Theory, Isospin, and Nuclear Shell Model	590
	Yukawa Theory	590
	Isospin	592
	Two-Nucleon System	593

Inter-Nucleon Potentials	594
Nuclear Shell Model	595
11–14 Octahedral Point Group and Other Point Groups	600
Other Common Point Groups	606
11–15 Atoms in Crystals	610
11–16 Molecules	614
Born–Oppenheimer Approximation	614
Molecular Shell Model	615
Vibration and Rotation of Diatomic Molecules	621
Vibration of Polyatomic Molecules	623
Rotation of Polyatomic Molecules	625
11–17* The $R_4$ Group as a Symmetry Group of the Hydrogen Atom	629
The $R_4$ Group	631
Casimir Operators	634
11–18 The $SU_3$ Group and Elementary Particles	635
The $SU_3$ Group	637
Irreducible Representations of $SU_3$	639
Clebsch–Gordan Series and Clebsch–Gordan Coefficients	640
Tensor Operators and the Wigner–Eckart Theorem in $SU_3$	642
Application to the Hadrons	644
Additional Problems	648
<b>Appendix I MATHEMATICAL FORMULAS</b>	651
(a) Vector Relations	651
(b) Matrices	652
(c) Special Functions	653
Trigonometric Functions	653
Spherical Harmonics	654
Legendre Polynomials	655
Gamma Function	655
Bessel Functions	656
Spherical Bessel Functions	659
Confluent Hypergeometric Functions (Kummer Functions)	662
(d) Character Tables of Some Point Groups	665
<b>Appendix II KEPLER'S PROBLEM</b>	674
(a) Kepler's Laws and Newton's Theory	674
(b) Special Relativistic Effects	679
(c) Kepler's Problem in General Relativity	681
(d) Simplified Theory of Gravitation	683
<b>Index</b>	685
