## I SUMMARY OF PRINCIPAL RECOMMENDATIONS

Recommendations on Gravitational Physics, 3

    Space Program in Gravitation, 3

    Ground-Based Studies in Gravitation, 4

    Gravitation Theory, 4

Recommendations on Cosmology, 5

    Space Program in Cosmology, 5

    Ground-Based Studies in Cosmology, 5

    Growth in Cosmology Research, 6

Recommendations on Cosmic-Ray Physics, 6

    Space Program in Cosmic Rays, 6

    Ground-Based Cosmic-Ray Studies, 7

## II GRAVITATION

1 EXPERIMENTAL TESTS OF GENERAL  
RELATIVITY: INTRODUCTION . . . . . 11

2 EXPERIMENTAL TESTS OF GENERAL  
RELATIVITY: HIGHLIGHTS . . . . . 15

    Equivalence Principle, Eötvös to Lunar Laser  
    Ranging, 15

Gravitational Redshift, Mössbauer to Rocketborne Maser, 17	
Light Deflection, Eclipses to Radio Interferometry, 19	
Signal Retardation, Newest and Most Accurate Test, 19	
Perihelion Advance, Einstein's only Handle, 21	
Changing Gravitational Constant, Solar-System Time Versus Atomic Time, 21	
Laboratory Testing of Gravitation, Searching for the Unexpected, 22	
 <b>3 EXPERIMENTAL TESTS OF GENERAL RELATIVITY: OPPORTUNITIES . . . . . 24</b>	
Tests for "Magnetic" Gravitational Effects, 24	
Relativity Gyroscope Experiment, 24	
Black-Hole Jets, 26	
Ranging to the Moon and Inner Planets, 27	
Radar Ranging, 28	
Ranging to Planetary Landers and Orbiters, 28	
Lunar Laser Ranging, 30	
Measurement of Second-Order Solar-System Effects, 31	
Gravitational Quadrupole Moment of the Sun, 33	
Systems of Compact Stars, 34	
 <b>4 SEARCH FOR GRAVITATIONAL WAVES: INTRODUCTION . . . . . 36</b>	
Theory, 37	
Sources, 38	
Detectors, 40	
 <b>5 SEARCH FOR GRAVITATIONAL WAVES: HIGHLIGHTS. . . . . 42</b>	
Binary Pulsar, 42	
Bar Detectors, 43	
Interferometric Detectors, 44	
Pulsar Timing and Millisecond Pulsars, 46	

Sources of Gravitational Waves—Recent Developments, 47	
<b>6 SEARCH FOR GRAVITATIONAL WAVES: OPPORTUNITIES . . . . .</b>	<b>49</b>
Laser Interferometer Detector with 5-Kilometer Baseline, 49	
Bar Detector Sensitivity and Bandwidth, 52	
Observations with Bar Detectors, 54	
Pulsar Searches, 55	
Spacecraft Tracking, 55	
Space Interferometers, 56	
Event Rates and Source Calculations, 57	
Computation, 58	
<b>7 GRAVITATION THEORY: INTRODUCTION . . .</b>	<b>59</b>
<b>8 GRAVITATION THEORY: HIGHLIGHTS . . .</b>	<b>61</b>
Neutron Stars, 61	
Gravitational Collapse and Black Holes, 62	
Quantum Particle Creation by Black Holes, 64	
Quantum Effects in the Early Universe, 64	
Alternative Theories, 65	
Exact Solutions of the Einstein Equations, 65	
Asymptotic Properties of Space-Time, 66	
Numerical Relativity, 67	
Emission of Gravitational Radiation, 67	
The Positive Energy Theorem, 68	
Quantum Field Theory in Curved Space-Time, 69	
Quantum Gravity, 69	
Supergravity, 71	
Kaluza-Klein Theories, 71	
<b>9 GRAVITATION THEORY: OPPORTUNITIES . . .</b>	<b>72</b>
Classical Gravitation, Singularities, Asymptotic Structure, 72	
Quantum Gravity, 73	
Astrophysical Properties of Neutron Stars and Black Holes, 75	

Computation, 77	
New Kinds of Experimental Tests, 77	
Communication with Other Subfields: Gravitation Experiment, Astronomy and Astrophysics, Field Theory and Elementary-Particle Physics, Pure Mathematics, 78	
<b>10 RECOMMENDATIONS . . . . .</b>	<b>80</b>
Space Techniques, 80	
Ground-Based Techniques, 81	
Gravitation Theory, 81	
<b>III COSMOLOGY</b>	
<b>11 INTRODUCTION—THE STANDARD MODEL . .</b>	<b>87</b>
<b>12 HIGHLIGHTS. . . . .</b>	<b>90</b>
Big-Bang Nucleosynthesis, 90	
Large-Scale Properties of the Universe, 92	
Structure in the Universe, 94	
Invisible Mass, 96	
Cosmology and Grand Unification, 98	
The Inflationary Universe, 99	
Gravitational Lenses, 100	
<b>13 OPPORTUNITIES . . . . .</b>	<b>101</b>
Observations from Space, 101	
Continued Ground-Based Observations, 104	
Particle Physics and Cosmology, 106	
Theory, 106	
<b>14 RECOMMENDATIONS. . . . .</b>	<b>108</b>
Space Program, 108	
Ground-Based Program, 109	
Human and Computational Resources, 109	
<b>IV COSMIC RAYS</b>	
<b>15 OVERVIEW . . . . .</b>	<b>115</b>

<b>16</b>	<b>HIGHLIGHTS . . . . .</b>	<b>121</b>
	Nucleosynthesis, 123	
	Isotope Ratios, 125	
	Abundances of Heavy Elements, 125	
	Solar Neutrinos, 126	
	Acceleration, 127	
	Shock Acceleration, 128	
	Acceleration Fractionation, 129	
	Termination of Acceleration Mechanism, 130	
	High-Energy Gamma Rays, 131	
	Anomalous Component, 132	
	Galactic Cosmic-Ray Transport and the Interstellar Medium, 132	
	Energy Dependence of Escape from Galaxy, 133	
	Correlation Between Anisotropy and Energy, 135	
	Secondaries from Light Nuclei, 135	
	Propagation in Galactic Halo, 136	
	Connection with Gamma and Radio Astronomy, 137	
	High-Energy Nuclear and Particle Physics, 137	
	Nucleon Decay Experiments as Cosmic-Ray Detectors, 138	
	Nucleus-Nucleus Collisions, 139	
	Cross Sections, Spectra, Anisotropies, and Composition of Primary Cosmic Rays Above $10^{17}$ Electron Volts, 140	
	Magnetic Monopoles, 141	
<b>17</b>	<b>OPPORTUNITIES . . . . .</b>	<b>143</b>
	Spaceborne Experiments, 143	
	Isotopes, 144	
	Galactic Cosmic-Ray Isotopes, 144; Solar-Flare Isotopes, 145	
	Ultraheavy Elements, 145	
	High-Energy Composition and Spectra, 146	
	Positrons, Antiprotons, Deuterium, and $^3\text{He}$ , 147	
	Antimatter, 148	
	Nucleus-Nucleus Interactions, 148	
	Solar Modulation of Cosmic Rays, 149	

Ground-Based Experiments, 149	
Gamma-Ray Astronomy, 149	
Air-Shower Detectors, 150	
Neutrino Astronomy, 151	
Magnetic Monopoles, 153	
Nucleon Decay Detectors, 153	
Solar Neutrinos, 154	
Future Opportunities, 155	
Theory, 155	
<b>18 RECOMMENDATIONS . . . . .</b>	<b>157</b>
Spaceborne Experiments, 157	
Major New Programs, 158	
Continuing Programs, 159	
Studies for the Future, 160	
Ground-Based Experiments, 161	
Gamma-Ray Astronomy, 162	
Highest-Energy Cosmic Rays and Extensive Air Showers, 162	
High-Energy Neutrino Astronomy, 163	
Magnetic Monopoles, 163	
Large Underground Detectors, 163	
Solar Neutrinos, 164	
Theory, 164	
<b>INDEX</b>	<b>165</b>
