

CONTENTS

VOLUME I

Preface	v
---------	---

PLENARY LECTURES

1	Overview of particle physics <i>Abdus Salam</i>	3
2	Should there be KNO scaling for $e^+ - e^-$ two-jet events? <i>T.T.Chou & Chen Ning Yang</i>	34
3	The general Chern-Simons characteristic classes and their physical applications <i>Wu Yue-liang, Xie Yan-bo & Zhou Guang-zhao</i>	42
4	Grand unification and new directions <i>Jogesh C. Pati</i>	87
5	Gravity and quantum theory <i>R. Penrose</i>	117
6	Remarks on the linear response theory <i>Ryogo Kubo</i>	122
7	Heavy particles in metals <i>Jun Kondo</i>	136
8	Defects: Old and new <i>Maurice Klemen</i>	157
9	Non-Euclidean crystallography <i>Alan L. Mackay</i>	179

HIGH ENERGY PHYSICS

1	The Bethe-Salpeter equation: From QED to QCD <i>A.N.Mitra</i>	209
2	The n-p mass ratio in QCD sum rules <i>Jue Ping Liu</i>	229
3	QCD sum-rule and electromagnetic form- factor of pion <i>Ashok Das, Vishnu S.Mathur & Prashant Panigrahi</i>	248
4	What we can learn about hadronic structure from QCD phenomenology and QCD sum rules <i>Huang Tao</i>	258

5	Quark theory of the N-N interaction <i>Xin-Hua Yang</i>	267
6	Algebraic structures of degenerate systems and the indefinite metric <i>Hendrik Grundling & C.A.Hurst</i>	275
7	Dirac quantization in superspace <i>J.Barcelos-Neto and Ashok Das</i>	291
8	Su(m/n) superalgebra and supergravities <i>Kee Yong Kim, Chang-Ho Kim, W.S.l'Yi, Y.J.Park & Yongduk Kim</i>	303
9	Commutator anomaly for the Gauss law constraint operator <i>Makoto Kobayashi, Koichi Seo & Akio Sugamoto</i>	306
10	Symmetry breaking via compensators in a N=1 supergravity theory <i>K.T.Mahanthappa & G.M.Staebler</i>	320
11	Making sense of anomalous gauge theories <i>R. Rajaraman</i>	321
12	Hadron cross sections at ultra high energies and unitarity bounds on diffraction <i>T.K.Gaisser, U.D.Sukhatme & G.B.Yodh</i>	338
13	Multiparticle unitarity and hadronic reactions <i>E. Predazzi</i>	350
14	Are there new long range forces in nature? <i>R.N.Mohapatra</i>	357
15	Field-theoretic model of composite particles with a Lagrangian description of the bound state <i>S. P. Misra</i>	369
16	String theories with new boundary conditions <i>S.M.Roy & Virendra Singh</i>	380
17	A solution of classical equation for strings <i>T. Pradhan & P.K.Jena</i>	394
18	Present status of TRISTAN <i>Y. Nagashima</i>	399
19	Studies of hadron-nucleus reactions at KEK-PS <i>K. Nakai</i>	414
20	Underground physics <i>M.R.Krishnaswamy, M.G.K.Menon, N.K.Mondal, U.S.Narasimham, B.U.Sreekantan, Y.Hayashi, N.Ito, S.Kawakami & S.Miyake</i>	424

- 21 Observation of multiple muons at Kolar
Gold Mine
*M.R.Krishnaswamy, M.G.K.Menon, N.K.Mondal,
U.S.Narasimham, B.U.Sreekantan, Y. Hayashi,
N. Ito, S. Kawakami & S.Miyake* 441
- 22 Inelastic interactions of 800 GeV protons
with emulsion nuclei
*R.K.Shivpuri, Anusuya Prasad, Anitha Kotha &
Pratibha Vikas* 454
- 23 A quark-diquark fragmentation model analysis
of hadron production in pp collisions at 360 GeV/c
T. Hirose, T. Kobayashi & T. Tsurugai 463
- 24 Track recording properties of cellulose
nitrate(J) plastic track detector
S. M. Farid 473

NUCLEAR PHYSICS

- 1 LCNO theory of transfer mechanism in
heavy ion reactions
Guozhu He, Chengqun Gao & Xiyu Chen 481
- 2 Bandcrossing and alignment in odd-N odd-A
bands from the effective decoupling model
Kiran Jain & Ashok K. Jain 495
- 3 Effects of meson exchange currents on
electron scattering
Il-Tong Cheon 505
- 4 Folding model estimation of heavy-ion
optical potential
Keshab Chandra Panda 511
- 5 Implication of quark cluster model in
nuclear physics
Koichi Yazaki 517
- 6 Microscopic theory of dynamical subspace
for large amplitude collective motion
Fumihiko Sakata, Toshio Marumori & Masanori Ogura 527
- 7 Determination of uranium trace content in
stainless steel using solid state nuclear track
detectors
M.M.Dhawan & K.K.Nagpaul 542
