

CONTENTS

VOLUME 1

Foreword	v
----------	---

PLENARY SESSIONS

(For the paper having more than one author the name of the presenter is underlined)

1. Fulfilling the Promise of Optical Fibre Communication <i>Kao C K</i>	3
2. Experiments at the TRISTAN e^+e^- Collider <i>Watanabe Y</i>	33
3. Characteristics of High T_c Superconducting Oxides <i>Zhong-xian Zhao</i>	90
4. The Japanese Program of Basic Research on High- T_c Superconductivity <i>Nakajima S & <u>Fukuyama H</u></i>	102
5. "Non-crystallographic" Symmetry and Quasicrystals <i>Kuo K H</i>	110
6. Phase Transitions and Critical Phenomena in Liquid Crystals at High Pressure <i>Shashidhar R</i>	130
7. Directions in Chaos <i>Hao Bai-lin</i>	151
8. Fusion Research in 'Small' Countries <i>Jones I R</i>	162
9. Electron Holography and Aharonov-Bohm Effect <i>Tomomura A</i>	187

- | | |
|--|-----|
| 10. The Evolution of Semiconductor Superlattices and Quantum Wells
<i>Esaki L</i> | 204 |
| 11. Two-dimensional Electron Correlation in a Magnetic Field:
The Fractional Quantum Hall Effect
<i>Tsui D C</i> | 239 |
| 12. Surface Reconstructed Structures and Dynamics: UHV Electron
Microscope and Diffraction Studies
<i>Takayanagi K</i> | 249 |

PARALLEL SESSIONS: INVITED PAPERS

(For the paper having more than one author the name of the presenter is underlined)

I. APPLIED PHYSICS

- | | |
|--|-----|
| 1. High Density Magnetic Memory
<i>Iwasaki Shun-ichi</i> | 265 |
| 2. A Real-time High Speed Optical Information Processor with
Hybrid System
<i>Mu Guo-guang</i> | 267 |

II. ASTROPHYSICS AND GRAVITATION

- | | |
|--|-----|
| 1. Constraints on the Majoron Interactions from the Supernova 1987A
<i>Choi Kiwoon, Kim C W, <u>Kim Jewan</u> & Lam W P</i> | 276 |
| 2. Origin of Cosmic Radiation — Fermi's Theory Revisited
<i>Fan C Y</i> | 293 |
| 3. Cosmology as "Condensed Matter" Physics
<i>Hu B L</i> | 301 |
| 4. Equivalence Principles and Polarized Experiments
<i>Ni Wei-tou</i> | 315 |

III. ATOMIC AND MOLECULAR PHYSICS

IV. BIOPHYSICS

1. Time-resolved X-ray Diffraction Study of Muscle Contraction
by Using Synchrotron Radiation 327
Mitsui T & Wakabayashi K

V. CHAOS AND NONLINEAR SYSTEMS

1. Frequency Locking Structure and the Farey Sequence in Optical
Bistability with Competing Interactions 338
*Zhang Hong-jun, Dai Jian-hua, Xu Guang,
Yang Shi-ping & Zhang Fu-lai*

VI. CONDENSED MATTER

1. Vibrational Dynamics of Adatom-surface Systems 357
Altendorf E & Liu Wing-ki
2. Symmetric Transmission Electron Momentum Spectroscopy
(Stems) on Thin Foils of Aluminium 368
Hayes P, Bennett M A, Flexman J & Williams J F
3. Photoelectron Spectroscopy of Solid by Synchrotron Radiation 380
Ishii T
4. Probing the Short-range-order Structure in Solids Using
Synchrotron Radiation 408
Kao Y H
5. Study of Molecular Adsorbates on Ag Surface by Using Laser
Photoacoustic Spectroscopy 421
Xu Ying, Ho Chang-wu, Zhu Ang-ru, Yu Li-ming & Wang Zhao-yong

VII. ELEMENTARY PARTICLES AND FIELD THEORY

1. High Temperature Bifurcation Phenomenon in Yang-Mills Gauge
Field Theories 430
Chang Lay-nam, Chang Ngee-pong & Chou Kuang-chao

2. Status and Frontiers in Heavy Quark Decays, Mixing and CP Noninvariance <i>Chau Ling-lie</i>	450
3. Recent Results From TOPAZ <i>Fujimoto J</i>	485
4. The Glueball Masses in 2 + 1 Dimensional Lattice Gauge Theory <i>Guo Shuo-hong, Zhong Wei-hong, Liu Jin-ming & Li Zhi-bing</i>	505
5. 3-Cocycle and Fractional Charge in Hybrid Chiral Bag Model <i>Hou Bo-yuan, Hou Bo-yu, Wang Pei & Song Xing-chang</i>	529
6. A Geometry Independent Field Theory of the String <i>Kikkawa K</i>	544
7. e^+e^- Physics at TRISTAN — The First Year and a Half of AMY <i>Ko W</i>	556
8. Recent Results From VENUS at TRISTAN <i>Sumiyoshi T</i>	570
 VIII. GENERAL PHYSICS	
1. Casimir Effects in Long-range EM Interactions <i>Au C K</i>	587
2. X-ray Phase Problem and its Solution Using Multi-beam Interference <i>Chang Shih-lin</i>	613
3. Progress of Testing the Intermediate-range Force at About 1 cm <i>Feng Shonglin & Zhang Pinghua</i>	625
4. A Microscopic Theory of Liquid Helium Four and Numerical Analysis of the Ground State Properties at 1.1 K <i>Fung P C W & Lam C C</i>	630
5. General Theory of Constrained Systems <i>Grundling H & Hurst C A</i>	648

6. Phase Transitions in Low-symmetry Systems: Universality vs Particularity
Hu Bambi 661
7. Percolation and Phase Transitions of Interacting Systems
Hu Chin-kun, Mak Kit-sing & Chen Chi-ning 668
8. Monodromy Representations of Braid Groups in Conformal Field Theory and Yang-Baxter Equation
Kohnno T 688
9. Berry's Phase and Gauge Structure in Time-Dependent Schrodinger Equations with Periodic Hamiltonian
Li Hua-zhong 697
10. Wave Localization Characteristics in the Time Domain
Ping Sheng, White B, Zhang Zhao-qing & Papanicolaou G 706
