Editor's foreword

SECTION I	Statistical physics and changes of state	
R. E. PEIERLS	Time reversal and the second law of thermodynamics	3
B. D. JOSEPHSON	Critical phenomena	11
E. H. LIEB	Ice, ferro- and antiferroelectrics.	21
D. J. THOULESS	The BCS model Hamiltonian as an exactly soluble problem in statistical mechanics.	29
A. HUBER	An inequality for traces and its application to extremum principles and related theorems in quantum statistical mechanics	37
E. E. SALPETER	Solid-state astrophysics	75
SECTION II	Excitations and reactions	
D. J. THOULESS	Excitations	83
C. DI CASTRO and G. JONA-LASINIO	Explicit examples of off-diagonal long-range order	91
S. DONIACH and M. J. RICE	Spin fluctuations and Fermi liquids	101
A. M. LANE	Nuclear resonance reactions in 1967	115
A. HERZENBERG	Compound states in atoms and molecules	131
S. T. BUTLER	Deuteron induced reactions.	167
SECTION III	Elementary particle and field theoretical methods	
S. MANDELSTAM	<i>S</i> -matrix theory.	189
H. M. NUSSENZVEIG	Applications of Regge poles to short-wavelength scattering	203
H. BURKHARDT and F. RIORDAN	Singularities of the <i>S</i> -matrix.	233
R. F. PEIERLS	Scattering of unstable particles	259
S. F. EDWARDS	Quantum field theory applied to the problems of polymer molecules	269
SECTION IV	Nuclear models and many-body theory	
B. H. FLOWERS	Nuclear models.	289
G. E. BROWN	Many-body problems and two-body forces	317
C. W. WONG	Nuclear ground-state properties in the reaction matrix theory	327
M. BRUNEAU and N. VINH MAU	Optical potential for nucleon scattering on calcium 40	333

CONTENTS

SECTION V	Symmetries, groups and algebras	
R. H. DALITZ	Some problems with the quark model for elementary particles	343
H. J. LIPKIN	Group theory and theoretical physics.	381
S. FUBINI	Recent progress in current algebra.	401
T. D. LEE	On the algebra of fields	415
CONCLUDING LECTURE - T. D. LEE		421
APPENDIX		427
LIST OF OTHER CONTRIBUTED PAPERS		433
LIST OF PARTICIPANTS		437
