

CONTENTS

Foreword		ix
D. J. Kevles	Cold War and Hot Physics: Reflections on Science, Security and the American State	1
L. Hoddeson	The Los Alamos Implosion Program in World War II: a Model for Postwar American Research	31
A. Pickering	Big Science as a Form of Life	42
D. H. DeVorkin	Along for the Ride: the Response of American Astronomers to the Possibility of Space Research, 1945—1950	55
C. S. Gillmor	Geospace and Its Uses: the Restructuring of Ionospheric Physics Following World War II	75
A. A. Needell	Lloyd V. Berkner on Organizing American Science for Social Purposes	85
P. Forman	Social Niche and Self-Image of the American Physicist	96
W. P. Trower	Luis Walter Alvarez (1911—1988)	105
S. Goldberg	Between Old and New: Goudsmit at Brookhaven	117
C. R. Koppes	National Security Perceptions and the Jet Propulsion Laboratory	138
A. Baracca	“Big Science” vs. “Little Science” in Post-War Physics	150
J. L. Heilbron	The Detection of the Antiproton	161
M. Walker	Cold War, Denazification, and the Myth of the German Atomic Bomb: the Recovery of the German Physics Community from the Legacies of Auschwitz, Greater Germany, and Hiroshima	218

T. Stamm	New Opportunities—Old Traditions: the Struggle for Autonomy of Post-War German Science	228
M. Eckert	Heisenberg and the Beginnings of Nuclear Energy in the FRG	247
N. F. Ramsey	Molecular Beams, Federal Support of Research and Brookhaven National Laboratory	257
S. R. Weart	The (Re)Organization of Solid State Physics	265
I. M. Khalatnikov	Fifteen Years with L. D. Landau	284
J. M. Sánchez-Ron	Echoes of the Civil War: Physics in Franco's Spain	304
M. Mladjenovic	Nuclear Energy Centres as Pioneers of Science in Less Developed Countries	312
W. K. H. Panofsky	Big and Small Science—How Different?	319
G. Giuliani	Physical Research on Solids in Italy Between 1900 and 1940: a Survey	339
G. Chiarotti	The Development of Italian Solid State Physics after the War	348
G. Salvini	The Electron Synchrotron and the Birth of the National Laboratories of Frascati	358
A. Silverman	Birth of Electron Synchrotrons at Cornell	414
C. Bernardini	AdA: the Smallest e^+e^- Ring	444
F. Amman	The Early Times of Electron Colliders	449
D. Pestre	The Creation of CERN in the Early 50s: Chance or Necessity?	477
J. Krige	The Installation of High-Energy Accelerators in Britain after the War: Big Equipment but not “Big Science”	488

S. J. Lindenbaum	Initial Experiments with the Nevis Cyclotron, the Brookhaven Cosmotron, the Brookhaven AGS and Their Effects on High Energy Physics	502
N. Dallaporta	Researches on High Energy Physics in Padova in the Period 1945 – 1960	532
M. Cresti	The Evolution of the Visual Techniques: the Track Chambers	548
V. L. Telegdi	Early Work on Lepton Physics*	584
D. H. Perkins	The Birth of Pion Physics	585
Ch. Peyrou	The Early Times of Strange Particles Physics	604
G. Bernardini	Research Activity at Columbia and Urbana Universities (personal recollections)	652
G. Fidecaro	From Cosmic Rays to Physics with Accelerators (personal recollections)	654
G. Tagliaferri	Post War Restarting of Cosmic Ray Research at Milan University	716
L. Belloni & C. Dilworth	From Little to Big. A Story of a European Post-War Collaboration with Nuclear Emulsions	732
R. E. Marshak	Scientific and Sociological Contributions of the First Decade of the “Rochester” Conferences to the Restructuring of Particle Physics (1950—1960)	745
F. Sebastiani & S. Stipcich	Photographic Display on the Frascati National Laboratories	787
List of Participants		801
