<b>Preface</b>	<b>ix</b>
<b>Chapter 1. General information about measurements</b>	
<b>1.1. Basic concepts and terms</b>	<b>1</b>
<b>1.2. Metrology and the basic metrological problems</b>	<b>2</b>
<b>1.3. Initial points of the theory of measurements</b>	<b>9</b>
<b>1.4. Classification of measurements</b>	<b>14</b>
<b>1.5. Classification of measurement errors</b>	<b>19</b>
<b>1.6. Principles of estimation of measurement errors</b>	<b>22</b>
<b>1.7. Presentation of results of measurements: Rules for rounding off</b>	<b>24</b>
<b>1.8. Basic conventional notations</b>	<b>26</b>
<b>Chapter 2. Measuring instruments and their properties</b>	
<b>2.1. Types of measuring instruments</b>	<b>28</b>
<b>2.2. The concept of an ideal instrument: Metrological characteristics of measuring instruments</b>	<b>31</b>
<b>2.3. Standardization of the metrological characteristics of measuring instruments</b>	<b>35</b>
<b>2.4. Some suggestions for changing methods of standardization of errors of measuring instruments and their analysis</b>	<b>45</b>
<b>2.5. Dynamic characteristics of measuring instruments and their standardization</b>	<b>50</b>
<b>2.6. Statistical analysis of the errors of measuring instruments based on data provided by calibration laboratories</b>	<b>55</b>
<b>Chapter 3. Prerequisites for the analysis of the inaccuracy of measurements and for synthesis of their components</b>	
<b>3.1. Preliminary remarks</b>	<b>59</b>

<b>3.2. Classification of elementary errors</b>	<b>60</b>
<b>3.3. Mathematical models of elementary errors</b>	<b>62</b>
<b>3.4. Methods for describing random quantities</b>	<b>64</b>
<b>3.5. Construction of the composition of uniform distributions</b>	<b>67</b>
<b>3.6. Universal method for constructing the composition of distributions</b>	<b>71</b>
<b>3.7. Natural limits of measurements</b>	<b>78</b>
<b>Chapter 4. Statistical methods for analysis of multiple measurements in the absence of systematic errors</b>	
<b>4.1. Formulation of the problem</b>	<b>88</b>
<b>4.2. Estimation of the parameters of the normal distribution</b>	<b>90</b>
<b>4.3. Outlying results</b>	<b>93</b>
<b>4.4. Construction of confidence intervals</b>	<b>94</b>
<b>4.5. Methods for testing hypotheses about the form of the distribution function of a random quantity</b>	<b>98</b>
<b>4.6. Methods for testing sample homogeneity</b>	<b>100</b>
<b>4.7. Estimation of the parameters of non-normal distributions</b>	<b>106</b>
<b>4.8. Example: Analysis of the measurement results in comparisons of measures of mass</b>	<b>107</b>
<b>Chapter 5. Direct measurements</b>	
<b>5.1. Relation between single and multiple measurements</b>	<b>110</b>
<b>5.2. Identification and elimination of systematic errors</b>	<b>112</b>
<b>5.3. Estimation of elementary errors</b>	<b>118</b>
<b>5.4. Method for calculating the errors of single measurements</b>	<b>123</b>
<b>5.5. Example: Calculation of errors in voltage measurements performed with a pointer-type voltmeter</b>	<b>127</b>
<b>5.6. Method for calculating the errors of multiple measurements</b>	<b>132</b>

<b>5.7. Comparison of different methods for combining systematic and random errors</b>	<b>142</b>
<b>5.8. Essential aspects of the estimation of measurement errors when the number of measurements is small</b>	<b>145</b>
<b>5.9. General plan for estimating measurement errors</b>	<b>147</b>
<b>Chapter 6. Indirect measurements</b>	
<b>6.1. Indirect measurements and calculations</b>	<b>150</b>
<b>6.2. Classification of indirect measurements</b>	<b>150</b>
<b>6.3. Error owing to incomplete correspondence between the model and the object of study</b>	<b>152</b>
<b>6.4. Linear indirect measurements</b>	<b>153</b>
<b>6.5. Calculation of the error of a compound resistor</b>	<b>157</b>
<b>6.6. Nonlinear indirect measurements</b>	<b>159</b>
<b>6.7. Calculation of the error of the measurement of the density of a solid body</b>	<b>168</b>
<b>6.8. Calculation of the error of the measurement of ionization current by the compensation method</b>	<b>171</b>
<b>6.9. Calculation of the error of indirect measurement of power at high frequency</b>	<b>174</b>
<b>6.10. Calculation of the error of measurement of voltage with the help of a potentiometer and a voltage divider</b>	<b>175</b>
<b>Chapter 7. Simultaneous and combined measurements</b>	
<b>7.1. General remarks about the method of least squares</b>	<b>179</b>
<b>7.2. Measurements with linear equally accurate conditional equations</b>	<b>180</b>
<b>7.3. Reduction of linear unequally accurate conditional equations to equally accurate conditional equations</b>	<b>183</b>
<b>7.4. Linearization of nonlinear conditional equations</b>	<b>184</b>
<b>7.5. Examples of the application of the method of least squares</b>	<b>185</b>
<b>7.6. Determination of the parameters in formulas from empirical data and construction of calibration curves</b>	<b>190</b>

<b>Chapter 8. Combining the results of measurements</b>	
<b>8.1. Introductory remarks</b>	<b>195</b>
<b>8.2. Theoretical principles</b>	<b>195</b>
<b>8.3. Effect of the error of the weights on the error of the weighted mean</b>	<b>199</b>
<b>8.4. Combining the results of measurements in which the random errors predominate</b>	<b>200</b>
<b>8.5. Combining the results of measurements containing both systematic and random errors</b>	<b>202</b>
<b>8.6. Example: Measurement of the activity of nuclides in a source</b>	<b>209</b>
<b>Chapter 9. Calculation of the errors of measuring instruments</b>	
<b>9.1. The problems of calculating measuring instrument errors</b>	<b>212</b>
<b>9.2. Methods for calculating instrument errors</b>	<b>213</b>
<b>9.3. Calculation of the errors of electric balances (unique instrument)</b>	<b>223</b>
<b>9.4. Calculation of the errors of ac voltmeters (mass-produced instrument)</b>	<b>225</b>
<b>9.5. Calculation of the errors of digital thermometers (mass-produced instrument)</b>	<b>232</b>
<b>Chapter 10. Problems in the theory of calibration</b>	
<b>10.1. Types of calibration</b>	<b>236</b>
<b>10.2. Estimation of the errors of measuring instruments in verification</b>	<b>238</b>
<b>10.3. Rejects of verification and ways to reduce their number</b>	<b>242</b>
<b>10.4. Calculation of a necessary number of standards</b>	<b>248</b>
<b>Appendix</b>	<b>254</b>
<b>Glossary</b>	<b>261</b>
<b>References</b>	<b>265</b>
