

CONTENTS

Preface	v
Introduction	1
Chapter 1: Wave Propagation in Inhomogeneous Medium	
1. Introduction	3
2. Solution of the Wave Equation in an Inhomogeneous Medium	4
3. The Wentzel – Kramers – Brillouin (WKB) Method	6
4. The Bremmer Series	7
5. The WKB and Bremmer Series Method for Oblique Incidence	8
6. Other Classical Methods	9
7. Invariant Imbedding Formulation	9
Chapter 2: Derivation of the Recurrence Equations Using Signal Flow Graphs	
1. Introduction	24
2. Normal Incidence	24
3. Oblique Incidence	28
4. Other Applications	30
Chapter 3: Solution to the Epstein Variation	31
Chapter 4: Turbulent Medium	35
Chapter 5: Results and Accuracy	41
Chapter 6: Conclusions	47
References	47
Appendix 1. Generation of Random Numbers with a Rectangular Distribution	50
Appendix 2. Conversion of Rectangular to Gaussian Distribution	52
Appendix 3. Statistical Testing	54
Appendix 4. Histograms of Random Numbers Generated	57
Appendix 5. The Ring Correlation Coefficient	59
Appendix 6. Histograms	60
Appendix 7. Fortran IV Programs	96
Index	125
