

Contents

<i>Foreword</i>	xi
<i>Preface</i>	xiii
<i>Acknowledgments</i>	xv
 Chapter 1 Introduction	 1
References	2
 Chapter 2 Operator Equations and the Decomposition Method	 3
2.1. Modeling, Approximation, and Reality	3
2.2. The Operator Equations	7
2.3. The Decomposition Method	10
2.4. Evaluation of the Inverse Operator L^{-1} and the y_{10} Term of the Decomposition for Initial or Boundary Conditions	11
References	17
Suggested Further Reading	17
 Chapter 3 Expansion of Nonlinear Terms: The A_n Polynomials	 19
3.1. Introduction	19
3.2. Calculation of the A_n Polynomials for Simple Nonlinear Operators	20
3.3. The A_n Polynomials for Differential Nonlinear Operators	24
3.4. Convenient Computational Forms for the A_n Polynomials	26
3.5. Linear Limit	29
3.6. Calculation of the A_n Polynomials for Composite Nonlinearities	29
References	33
Suggested Further Reading	33
 Chapter 4 Solution of Differential Equations	 34
4.1. General Method and Examples	34
4.2. Calculating a Simple Green's Function	38
4.3. Green's Function by Decomposition	40

4.4.	Approximating Difficult Green's Functions	42
4.5.	Polynomial Nonlinearities	47
4.6.	Negative Power Nonlinearities	54
4.7.	Decimal Power Nonlinearities	57
4.8.	Product Nonlinearities	59
4.9.	Anharmonic Oscillator Systems	67
4.10.	Limiting Case: The Harmonic Oscillator	70
4.11.	Extensions to Stochastic Oscillators	71
4.12.	Asymptotic Solutions	72
	References	87
	Suggested Further Reading	87
Chapter 5 Coupled Nonlinear Stochastic Differential Equations		88
5.1.	Deterministic Coupled Differential Equations	88
5.2.	Stochastic Coupled Equations	93
5.3.	Generalization to n Coupled Stochastic Differential Equations	93
	Suggested Further Reading	97
Chapter 6 Delay Equations		98
6.1.	Definitions	98
6.2.	Solution of Delay Operator Equations	100
	Reference	105
	Suggested Further Reading	106
Chapter 7 Discretization versus Decomposition		107
7.1.	Discretization	107
7.2.	A Differential-Difference Equation	113
7.3.	Difference Equations and the Decomposition Method	114
7.4.	Some Remarks on Supercomputers	114
	References	116
	Suggested Further Reading	116
Chapter 8 Random Eigenvalue Equations		117
	References	122
	Suggested Further Reading	122
Chapter 9 Partial Differential Equations		123
9.1.	Solving m -Dimensional Equations	123
9.2.	Four-Dimensional Linear Partial Differential Equation	129
9.3.	Nonlinear Partial Differential Equation	131
9.4.	Some General Remarks	133
9.5.	The Heat Equation	135
9.6.	Inhomogeneous Heat Equation	138

CONTENTS	ix
9.7. Asymptotic Decomposition for Partial Differential Equations	139
Reference	140
Suggested Further Reading	140
Chapter 10 Algebraic Equations	142
<i>Part I Polynomials</i>	142
10.1. Quadratic Equations by Decomposition	142
10.2. Cubic Equations	155
10.3. Higher-Degree Polynomial Equations	158
10.4. Equation with Negative Power Nonlinearities	163
10.5. Equations with Noninteger Powers	165
10.6. Equations with Decimal Powers	167
10.7. Random Algebraic Equations	169
10.8. General Remarks	170
<i>Part II Transcendental Equations</i>	170
10.9. Trigonometric Equations	170
10.10. Exponential Cases	174
10.11. Logarithmic Equation: Purely Nonlinear Equations	178
10.12. Products of Nonlinear Functions	181
10.13. Hyperbolic Sine Nonlinearity	186
10.14. Composite Nonlinearities	187
<i>Part III Inversion of Matrices</i>	197
10.15. Discussion: Inversion by Decomposition	197
10.16. Convergence	203
10.17. Decomposition into Diagonal Matrices	203
10.18. Systems of Matrix Equations	214
10.19. Inversion of Random Matrices	216
10.20. Inversion of Very Large Matrices	217
References	222
Suggested Further Reading	222
Chapter 11 Convergence	223
11.1. The Convergence Question for the Nonlinear Case	223
11.2. Estimating the Radius of Convergence	227
11.3. On the Calculus	229
11.4. Some Remarks on Convergence	230
References	230
Chapter 12 Boundary Conditions	231
12.1. Linear Boundary Conditions	231
12.2. Treatment of Inhomogeneous Boundary Conditions	232
12.3. General Boundary Operators and Matrix Equations	234
12.4. Random Boundary Operators	235
12.5. Random Inhomogeneous Boundary Conditions	236
12.6. Linear Differential Equations with Linear Boundary Conditions	237
12.7. Deterministic Operator Equations with Random Input and Random Boundary Conditions	245

12.8.	Stochastic Operator Equations with Linear Boundary Conditions	248
12.9.	Linear Stochastic Equations with Nonlinear Boundary Conditions	249
12.10.	Linear Differential Equations with Nonlinear Boundary Conditions	252
12.11.	Coupled Nonlinear Stochastic Differential Equations	258
12.12.	Coupled Linear Deterministic Equations with Coupled Boundary Conditions	260
12.13.	Coupled Equations and Coupled Boundary Conditions	266
12.14.	Boundary Conditions for Partial Differential Equations	267
12.15.	Summary	269
	Reference	274
	Suggested Further Reading	274
Chapter 13	Integral and Integro-Differential Operators	275
Chapter 14	On Systems of Nonlinear Partial Differential Equations	279
	References	282
Chapter 15	Postlude	283
	References	284
<i>Index</i>		285
<i>Errata for "Stochastic Systems"</i>		287
