List of Contributors ix

Preface xi

1. The Padé Approximant Method and Some Related Generalizations

George A. Baker, Jr.

I. Introduction 1
II. The Theory of the Padé Approximant Method 2
III. Generalized Approximation Procedures 20
IV. Applications 29
References 38

2. Application of Padé Approximants to Dispersion Force and Optical Polarizability Computations

P. W. Langhoff and M. Karplus

I. Introduction 41
II. Formalism 43
III. Computation Procedures 53
IV. Applications 67
V. Comparisions with Related Methods 86
VI. Concluding Remarks 94
References 95

3. Bounds for Averages Using Moment Constraints

J. C. Wheeler and R. G. Gordon

I. Introduction 99
II. The Moments Problem 102
III. Applications 113
IV. Conclusion 123
Appendix A 124
Appendix B 126
References 128

4. Turbulent Diffusion: Evaluation of Primitive and Renormalized Perturbation Series by Padé Approximants and by Expansion of Stieltjes Transforms into Contributions from Continuous Orthogonal Functions

Robert H. Kraichnan

I. Introduction 129
II. Continuous Orthogonal Expansion of Stieltjes Transforms 131
III. Examples Comparing Continuous Orthogonal Expansion and Padé Approximants 134
IV. Diffusion by a Random Velocity Field 139
V. Perturbation Expansions for the Diffusion Problem 144
VI. Approximants to the Primitive Perturbation Expansions 150
VII. Approximants to the Irreducible Expansion 156
References 169

5. Padé Approximants and Linear Integral Equations

J. S. R. Chisholm

I. Introduction 171
II. Properties of Linear Integral Equations 172
III. Integral Equations and Padé Approximants 176
IV. The Integral Equation for Potential Scattering 178
References 182

6. Series of Derivatives of δ-Functions

J. S. R. Chisholm and A. K. Common

I. Introduction 183
II. An Example 185
III. Expressions for $g(k)$ 186
IV. Approximants to $g(k)$ 189
V. Conclusions 194
References 195

7. Hilbert Space and the Padé Approximant

D. Masson

I. Introduction 197
II. Extended Series of Stieltjes 198
III. Symmetric Operators and the Padé Approximant 202
IV. Method of Moments 206
V. Discussion 216
References 217

8. The Connection of Padé Approximants with Stationary Variational Principles and the Convergence of Certain Padé Approximants

J. Nuttall

I. Introduction 219
II. Derivation of Padé Approximants from Stationary Variational Principles 220
III. Convergence of Padé Approximants 225
IV. The Convergence of Padé Approximants to Convergent Power Series 227
References 229

9. Approximate N/D Solutions Using Padé Approximants

D. Masson

I. Introduction 231
II. Method 231
III. Proof of Unitarity and Convergence 233
IV. Discussion 239
References 239

10. The Solution of the N/D Equations Using the Padé Approximant Method

A. K. Common

I. Introduction 241
II. The Integral Equations for N and D and Their Approximate Solution 242
III. Convergent Sequences of Approximate Solutions to the N/D Equations 245
IV. The ρ Bootstrap and Related Amplitudes 249
References 256

11. Padé Approximants as a Computational Tool for Solving the Schrödinger and Bethe–Salpeter Equations

Richard W. Haymaker and Leonard Schlessinger

I. Introduction 257
II. Basic Philosophy and a Simple Example 258
III. Rational-Fraction Fitting 263
IV. Two-Channel Nonrelativistic Scattering 269
V. Bethe–Salpeter Equation 272
VI. Three-Body Scattering 280
References 287

12. Solution of the Bethe–Salpeter Equation by Means of Padé Approximants

J. A. Tjon and H. M. Nieland

I. Introduction 289
II. The Integral Equations 290
III. The Numerical Method 295
IV. Results and Discussion 298
Appendix A 300
Appendix B 301
References 302

13. Application of the Padé Approximant to a Coupled Channel Problem: Meson–Baryon Scattering

J. L. Gammel, M. T. Menzel, and J. J. Kubis

I. Introduction 303
II. The Padé Approximant to the Scattering Amplitude in the Case of Coupled Channel Potential Models 305
III. Formal Preliminaries to the Results 317
IV. Results for the (3, 3) State ($\pi^+ - p$ and $K^+ - \Sigma^+$ Elastic Scatterings and Reaction) 326
V. Study of a Potential Model 330
References 331

14. The Padé Approximant in the Nucleon–Nucleon System

W. R. Wortman

I. Introduction 333
II. The Padé Approximant in Scattering Theory 334
III. The Nucleon–Nucleon System 339
IV. The Padé Approximant for N–N Scattering 349
V. Results 363
VI. Summary 365
References 367
