CONTENTS

Preface vii

Chapter I - Stochastic Models - 1

1.1 - Introduction 1
1.2 - Why Stochastic Mathematical Models of Physical Systems? 3
1.3 - Classification of Random Differential Equations 6
1.4 - Modelling and Parameter Identification 10
1.5 - Function Spaces and the Definition of Solution 13
1.6 - On the Computing of the First and Second Order Moments of the Solution Process 21
1.7 - On the Computation and Approximation of the Probability Density 27
References to Chapter I 41

Chapter II - Regular Perturbation Techniques - 43

2.1 - Introduction 43
2.2 - Perturbation Techniques for Ordinary Differential Equations in One Dimension 45
2.3 - Perturbation Techniques for Ordinary Differential Equations in Several Dimensions 62
2.4 - Semilinear Weakly Perturbed Equations and Discussion 78
2.5 - Application: Random Satellite's Dynamics 81
References to Chapter II 91

Chapter III - The Decomposition Method - 93

3.1 - Introduction 93
3.2 - The Inverse Operator Method for Ordinary Differential Equations in One Dimension 94
3.3 - The Decomposition Method for Systems in Several Dimensions 104
3.4 - A Comparison between the Decomposition Method and the Perturbation Technique and Picard Iterations 106

3.5 - Application 109
References to Chapter III 119

Chapter IV - Time Evolution of the Probability Density - 121

4.1 - Introduction 121
4.2 - Deterministic Dynamical Systems with Random Initial Conditions 122
4.3 - Stochastic Systems with Random Initial Conditions and Parameters 129
4.4 - On the Approximation of the Probability Density 133
4.5 - Second Order Probability Density 137
4.6 - Applications 144
References to Chapter IV 157

Chapter V - Periodic Solutions of Random Differential Equations - 159

5.1 - Introduction 159
5.2 - Analysis of Periodic Solutions via Transformation of the Differential Equation into an Integral Equation 161
5.3 - Periodic Solutions via Direct Application of Perturbation Techniques 168
5.4 - Periodic Solutions via Direct Application of Decomposition Methods 172
5.5 - Applications 176
References to Chapter V 193

Chapter VI - An Introduction to the Solution of Random Partial Differential Equations - 195

6.1 - Introduction 195
6.2 - The Mathematical Model 198
6.3 - On the Approximation of Random Space-time Functions 200
6.4 - The Mathematical Method 203
6.5 - Application 206
6.6 - Some Developments of the Method 210
References to Chapter VI 212

General Bibliography 214

Appendix - Basic Concepts of Probability Theory, Random variables and Stochastic Processes - 215

A.1 Axioms of Probability 215
A.2 Random Variables 216
A.3 Examples of Distributions 222
A.4 Functions of Random Variables 228
A.5 Stochastic Processes 229
A.6 Examples of Stochastic Processes 234
