PREFACE ix

ACKNOWLEDGMENTS xi

Introduction 1

I Classical Methods 3

Prefatory Remarks 3
1. Exact Equations and Direct Integration 4
2. The General Solution 6
3. Separation of Variables 8
4. Characteristics and Integral Surfaces 11
5. The Complete Integral 13
6. The Cauchy–Kowaleski Theorem 18
7. The Legendre Transform 21
8. Characteristic Theory 23
9. Elementary Transformations 30
10. Variational Methods 36
11. Hamilton–Jacobi Theory 39
12. Contact Transformations 43
13. Similarity Methods 45

II Existence 51

1. Global Solutions 51
2. The Compatibility Condition 55
3. The Variational Solution 59

4. Growth Conditions 61
5. Regularity 64
6. Space–Time Independent Hamiltonians 68
7. Space–Time Dependence 71
8. Equivalent Problems 75
9. A Little *u* Dependence? 77
10. Other Existence Techniques 81

III Uniqueness and Properties of Solutions 85

Preamble 85
1. Basic Inequalities 86
2. Uniqueness for the Cauchy Problem 97
3. Uniqueness for More General Boundaries 102
4. Maximality of the Variational Solution 105

IV Applications and Numerical Methods 111

General Comments 111
1. Some Physical Applications 112
2. Applications in the Calculus of Variations and Control Theory 113
3. Minimization of a Function 115
4. Quasilinear Equations 118
5. Numerical Methods for the Calculus of Variations 120
6. Numerical Methods for First-Order Equations 126
7. Artificial Viscosity 129

Bibliography 133
