

CONTENTS

Transition of the Quasi-Levels in the Discrete Spectrum of the Schrödinger Operator under Strong Perturbations of the Potential A. G. Alenitsyn	1
A Criterion for the Existence of the Complete Wave Operators in the Theory of Scattering with Two Spaces M. Sh. Birman	17
The Inverse Problem for the Wave Equation with an Unknown Source A. S. Blagoveshchenskii	23
On the Various Formulations of the One-Dimensional Inverse Problem for the Telegraph Equation A. S. Blagoveshchenskii	35
Quantitative Characteristics of Singular Measures V. V. Borzov	37
Spectral Identities and the Trace Formula in the Friedrichs Model V. S. Buslaev	43
Perturbation of the Spectrum of the One-Dimensional Self-Adjoint Schrödinger Operator with a Periodic Potential V. A. Zheludev	55
The Field of a Point Source Located Outside a Convex Curve I. A. Molotkov	77
Criteria for the Boundedness and Complete Continuity of Certain Imbedding Operators V. L. Oleinik and B. S. Pavlov	101
A Uniqueness Theorem for Functions with Positive Imaginary Part B. S. Pavlov	107
Application of the Method of Standard Comparison Problems to Perturbations of the Coulomb Field. The Discrete Spectrum S. Yu. Slavyanov	113
