

# CONTENTS

INTRODUCTION	1
I. ROTATIONS AND UNITARY TRANSFORMATIONS	
1. Solution of the Schrödinger equation for a single electron, using spinors . . . . .	4
2. Invariance of the Schrödinger equation at rotations of the coordinate system . . . . .	8
3. Spinors and their transformations . . . . .	9
4. Unitary spinor invariants . . . . .	14
5. Polynomials of spinor components and their transformations	16
II. WAVEFUNCTIONS AND SPINOR INVARIANTS	
1. The transformations of wavefunctions . . . . .	21
2. Classification of wavefunctions with respect to angular momentum quantumnumbers. Calculation of matrixelements	23
3. Simplification of the calculation of matrixelements by the use of differentiation . . . . .	29
4. The electrons spin . . . . .	32
5. The Schrödinger equation for $N$ spinning electrons . . . .	37
6. The classification of wavefunctions for $N$ spinning electrons with zero orbital angular momentum . . . . .	40
7. The classification of wavefunctions for non zero orbital angular momentum . . . . .	44
8. The construction of wavefunctions from one-electron wavefunctions. Limitation of the method of spinor invariants .	46
III. APPLICATION OF SPINOR INVARIANTS TO DETAILED CALCULATIONS	
1. The electrostatic interaction in two-electron systems . . . .	53
2. The spin-orbit interaction . . . . .	59
3. Intensities of spectral lines . . . . .	62
