Contents	v
Contents of Volume II	x
Preface	xi
Foreword	xiii
Chapter 0. Introduction	1
0.N. Notes to chapter 0	3
Chapter 1. The Main Idea and Results: An Overview	7
1.1. Solution of linear evolution equations by Fourier transform	7
1.2. A class of solvable nonlinear evolution equations	14
1.3. The spectral transform	15
1.3.1. Direct spectral problem	16
1.3.2. Inverse spectral problem	18
1.3.3. The spectral transform	20
1.4. Solution of nonlinear evolution equations via the spectral transform	22
1.5. Relation to the Fourier transform technique to solve linear evolution equations	26
1.6. Qualitative behaviour of the solutions: solitons and background	27
1.6.1. Solitons	28

1.6.2. Background	32
1.6.3. Generic solution	33
1.7. Additional properties of the solutions	34
1.7.1. Bäcklund transformations	35
1.7.2. Nonlinear superposition principle	41
1.7.3. Conservation laws	42
1.8. A list of solvable equations	48
1.N. Notes to chapter 1	63
Chapter 2. The Schroedinger Spectral Problem on the Line	68
2.1. Direct spectral problem	68
2.1.1. Transformation properties	79
2.2. Inverse spectral problem	81
2.3. The spectral transform	87
2.4. Formulae relating two functions to the corresponding spectral transforms	89
2.4.1. Wronskian integral relations	89
2.4.1.1. Additional wronskian integral relations	105
2.4.2. Spectral integral relations	108
2.4.2.1. Additional spectral integral relations	115
2.4.3. Connection between wronskian and spectral integral relations	117
2.N. Notes to chapter 2	118
Chapter 3. Nonlinear Evolution Equations Solvable by the (Schroedinger) Spectral Transform	120
3.1. KdV and higher KdV's	120
3.2. Analysis of the solutions	131
3.2.1. Solitons and solitrons	132
3.2.2. The weak field limit	164
3.2.3. Generic solution	165
3.2.4. Special solutions of the KdV equation	167
3.2.4.1. Rational solutions	167
3.2.4.2. Asymptotically diverging solutions	171
3.2.4.3. Similarity solutions and ODE's of Painlevé type	171
3.N. Notes to chapter 3	175

Chapter 4. Bäcklund Transformations and Related Results	179
4.1. Bäcklund transformations	181
4.2. Commutativity of Bäcklund transformations and nonlinear superposition principle	191
4.3. Resolvent formula	199
4.4. Nonlinear operator identities	201
4.5. Generalized Bäcklund transformations and resolvent formula	202
4.N. Notes to chapter 4	205
Chapter 5. Conservation Laws	208
5.N. Notes to chapter 5	224
Chapter 6. Extensions	226
6.1. More variables	227
6.2. Coefficients depending linearly on x	234
6.3. Solutions of the KdV equation that are asymptotically linear in x	255
6.3.1. The Schroedinger spectral problem with an additional linear potential	258
6.3.2. Solution of a nonlinear evolution equation including as a special case the cylindrical KdV equation	268
6.3.3. Conservation laws	270
6.3.4. The cylindrical KdV equation	276
6.4. Solutions of the KdV equation with one real double pole	281
6.5. Evolution equations associated with the spectral problem based on the ODE $-\psi_{xx}(x) + u(x)\psi(x) = k^2[\rho(x)]^2\psi(x)$	287
6.N. Notes to chapter 6	296
Appendices	
A.1. On the number of discrete eigenvalues of the Schroedinger spectral problem on the whole line	299
A.2. Orthogonality and completeness relations for the Schroedinger spectral problem on the whole line	306

A.3. Asymptotic behaviour (in k) of the transmission and reflection coefficients	309
A.4. Dispersion relations for the transmission coefficient	311
A.5. The inverse spectral Schroedinger problem on the whole line	313
A.5.N. Notes to appendix A.5	330
A.6. Wronskian integral relations: proofs	330
A.7. Spectral integral relations: proofs	338
A.8. A formula for the variation of the coefficients of the asymptotic expansion of the phase of the transmission coefficient	341
A.9. Properties of the operators Λ , $\tilde{\Lambda}$, L , \tilde{L} , and other formulae	343
A.10. The two-soliton solution of the KdV and higher KdV equations	365
A.11. Miura and Gardner transformations and related results	370
A.12. Bäcklund transformations, Darboux transformations and Bargmann strip	378
A.13. Asymptotic expansion of $C(k) = 2ik[1 - 1/T(k)]$	386
A.14. Conserved quantities for generalized KdV equations	388
A.15. Reflection and transmission coefficients at $k=0$	390
A.15.N. Notes to appendix A.15	394
A.16. The spectral transform outside of the class of <i>bona fide</i> potentials	394
A.17. Applications of the wronskian and spectral integral relations to the Schroedinger scattering problem on the whole line	398
A.18. On the class of equations $\eta(L)u_t = \alpha(L)u_x$	412
A.19. Examples of functions with explicitly known spectral transform	418
A.20. A general approach based on the algebra of differential operators; connections with, and amongst the spectral transform method, the Lax approach and the AKNS technique	444
A.20.N. Notes to appendix A.20	461
A.21. Local conservation laws: proofs	462

A.22. “Variable phase approach” to the Schroedinger scattering problem on the whole line	470
A.23. KdV and higher KdV equations as hamiltonian flows: an outline	477
A.23.N. Notes to appendix A.23	486
References	488
Subject Index	511
List of Symbols	514
