

Contents

1. MOVING-BOUNDARY PROBLEMS: FORMULATION	1
1.1. Introduction	1
1.2. A simple example: melting ice	2
1.2.1. Single phase	2
1.2.2. Two phases	4
1.2.3. The Stefan condition	4
1.3. Generalizations of the classical Stefan problem	5
1.3.1. Non-linear heat parameters	5
1.3.2. Linearized forms	8
1.3.3. Non-dimensional forms	9
1.3.4. Density change and convection	10
1.3.5. Ablation and the inverse Stefan problem	11
1.3.6. Multi-phase problems	12
1.3.7. Simultaneous diffusion and heat flow: alloys	14
1.3.8. Muskat's problem	16
1.3.9. Two and three space dimensions	16
1.3.10. Implicit boundary conditions: oxygen diffusion problem	19
1.3.11. Concentrated thermal capacities	23
2. FREE-BOUNDARY PROBLEMS: FORMULATION	30
2.1. Introduction	30
2.2. Simple rectangular dam	31
2.2.1. Classical formulation: physical derivation	31
2.2.2. Stream function	34
2.2.3. Formulation on fixed domain: Baiocchi transformation	34
2.2.4. Variational inequality formulation	38
2.2.5. In terms of stream functions	40
2.3. Other two-dimensional dams	41
2.3.1. Rectangular dam with toe drain	41
2.3.2. Rectangular dam with sheetpile	44

2.3.3. Rectangular dam with toe drain and sheetpile	46
2.3.4. Dam with inlet face slanted	47
2.3.5. Dam with inlet face slanted and a toe drain	49
2.3.6. Dam with sloping base	50
2.3.7. Arbitrary-shaped dam	52
2.3.8. Arbitrary-shaped dam with toe drain; split-domain method	54
2.4. Three-dimensional dams	57
2.5. Coastal aquifer	60
2.6. Canals and ditches	63
2.7. Axisymmetric flow	66
2.8. Heterogeneous porous media	70
2.8.1. Stratified dams	71
2.9. Evaporation or infiltration	74
2.10. Unsaturated flow: capillary fringe	75
2.11. A generalized dam problem: a new formulation	79
2.12. Degenerate free-boundary problems	81
2.12.1. Hele-Shaw flow analogy	81
2.12.2. Hele-Shaw injection	82
2.12.3. Electrochemical machining	85
2.12.4. Evolution dam problem	90
2.13. Lubrication cavitation in a journal bearing	93
2.14. A more general look at the Baiocchi transformation	96
2.15. Connections between certain free-boundary problems	100
3. ANALYTICAL SOLUTIONS	101
3.1. Exact similarity solutions	101
3.2. Neumann's solution; generalizations; volume changes	101
3.3. Similarity solutions in cylindrical and spherical coordinates	110
3.4. Similarity solutions and moving heat sources	111
3.5. Integral-equation formulations	114
3.5.1. Integral transforms	114
3.5.2. Green's functions	117
3.5.3. Embedding technique	122
3.5.4. Heat-balance method: Goodman	128
3.5.5. Heat-balance method with spatial subdivision	133
3.5.6. Multi-dimensional problems	137
3.6. Approximate solutions	139
3.6.1. Steady-state approximation and improvements	139
3.6.2. Spacial subdivision	142

3.6.3. The inverse Stefan problem	144
3.6.4. Fictitious diffusivity approximations	147
3.6.5. Perturbation methods; asymptotic solutions; stability	150
4. FRONT-TRACKING METHODS	163
4.1. Numerical techniques	163
4.2. Fixed finite-difference grid	163
4.3. Modified grids	168
4.3.1. Variable time step	168
4.3.2. Variable space grid	170
4.3.3. Finite-elements: adaptive meshes	173
4.4. Method of lines	181
5. FRONT-FIXING METHODS	187
5.1. One-dimensional problems	187
5.2. Body-fitted curvilinear coordinates	192
5.3. Examples of use of body-fitted coordinates	195
5.4. Isotherm migration method	199
5.4.1. IMM in one space dimension	199
5.4.2. IMM in multi-dimensional problems	201
6. FIXED-DOMAIN METHODS	217
6.1. Introduction	217
6.2. Enthalpy method	217
6.2.1. Weak solutions	220
6.2.2. An explicit finite-difference scheme	223
6.2.3. Alternative forms of the enthalpy function	226
6.2.4. Other numerical schemes and multi-dimensional problems	228
6.2.5. Accurate determination of phase-change boundary	235
6.2.6. Body heating	239
6.2.7. Other conservation forms and weak solutions	242
6.2.8. Conditions not amenable to enthalpy formulation	252
6.3. Truncation method: alternating phase	253
6.4. Variational inequalities	257
6.4.1. Introductory example	260
6.4.2. Variational form	263
6.4.3. Minimization formulation	265
6.4.4. Review of equivalent forms	267
6.4.5. One-phase Stefan problem	269

6.4.6. Two-phase Stefan problem	275
6.4.7. Mathematical results	281
7. ANALYTICAL SOLUTION OF SEEPAGE PROBLEMS	283
7.1. Introduction	283
7.2. Approximate methods	283
7.2.1. Dupuit's approximation	283
7.2.2. Boussinesq's equations	285
7.2.3. Other approximate methods	287
7.3. Hodograph method: conformal transformations	288
7.3.1. Hodograph plane	288
7.3.2. Some useful transformations	293
7.3.3. Trapezoidal drainage ditch	297
7.4. Polubarnova-Kochina's solution for the simple dam	300
8. NUMERICAL SOLUTION OF FREE-BOUNDARY PROBLEMS	313
8.1. Numerical solutions	313
8.2. Trial free-boundary methods	313
8.2.1. Computation of approximate trial solutions	314
8.2.2. Moving the free boundary	319
8.2.3. Garabedian's modified boundary conditions	329
8.3. Boundary singularities	332
8.4. Methods using variable interchange	336
8.4.1. Adaptive variational formulation	337
8.4.2. Transformation of equation and flow region	343
8.5. Variational inequality and complementarity methods	355
8.5.1. Finite-difference and finite-element forms of the Cryer algorithm	359
8.5.2. Axisymmetric problems	372
8.6. A general algorithm for partially unsaturated flow	376
8.7. Integral equation methods	384
8.7.1. Two-dimensional annular electrochemical machining problem	385
