

# CONTENTS

Preface	xii
Introduction	1
<b>PART I. FUNDAMENTAL CONCEPTS</b>	
<i>Chapter 1. Complex Variables</i>	5
1-1. Rectangular Form of the Complex Variable	5
1-2. Polar Form of the Complex Variable	6
1-3. Vector Representation in the Complex Plane	8
1-4. Addition of Vectors in the Complex Plane	9
1-5. Multiplication and Division of Vectors in the Complex Plane	12
<i>Chapter 2. Fourier Analysis</i>	15
2-1. The Periodic Function	15
2-2. Fourier Series of a Periodic Function	16
2-3. Determination of the Coefficients of the Fourier Series	19
2-4. Harmonic Content of a General Periodic Function	20
2-5. Illustrative Example	21
2-6. Principle of Superposition for Linear Systems	23
<i>Chapter 3. The Differential Equations of Motion</i>	25
3-1. Concepts of Inertia, Damping, and Restoring Force	25
3-2. Equivalent Spring and Equivalent Damper	32
3-3. Formation of Differential Equations by Newton's Law of Motion	36
3-4. The Damped System	39
3-5. The Operational Method of Solution of the Differential Equations of Motion; the Laplace Transform	41
3-6. Introduction to the Transfer Function	46
3-7. Motion Inputs	48

vi CONTENTS

3-8. The Generation of Independent Inputs	50
3-9. The Classical Electromechanical Analogy	52
<i>Chapter 4. The Transfer Function</i>	58
4-1. Introduction	58
4-2. General Solution by Partial Fractions	59
4-3. Operational Output with Multiple Poles	61
4-4. The Damped System	62
4-5. The Underdamped System	67
4-6. The Steady-State Component	74
4-7. The Overdamped System	78
4-8. The Critically Damped System	81
4-9. The Motion Output Due to Initial Conditions	84
4-10. The Motion Output Due to a Motion Input	87
4-11. The Behavior of a System	92
4-12. Experimental Measurement of Shock and Vibration	94
4-13. The Mobility Method	97
4-14. The Mobility Electromechanical Analogy	102
<i>Chapter 5. The Frequency Spectrum</i>	107
5-1. Introduction	107
5-2. Amplification	108
5-3. Amplification Due to a Force Input	112
5-4. The Amplification in Decibels	115
5-5. The Approximate Frequency Spectrum	118
5-6. The Experimental Determination of the Transfer Function	124
<b>PART II. LUMPED-PARAMETER SYSTEMS WITH MULTIPLE DEGREES OF FREEDOM</b>	
<i>Chapter 6. Translational Mode of Shock and Vibration</i>	131
6-1. Degrees of Freedom; Concept of Constraints	131
6-2. The Transfer Functions Obtained from Differential Equations	135
6-3. The Frequency Equation	140
6-4. The Outputs of the Dynamical System	143
6-5. Absorption and Isolation	148
6-6. The Transfer Function by the Mobility Method	152

6-7. Transmissibility	154
6-8. The Frequency Spectrum	158
<i>Chapter 7. Rotational Mode of Shock and Vibration</i>	160
7-1. Coupling between the Rotational and Translational Modes of Motion	160
7-2. Equations of Coupling for a Plane Rigid Body	163
7-3. Inverse Transformation of Coordinates	168
7-4. Solution by the Classical Method	173
7-5. Transfer Functions by the Classical Method of a System with Two Degrees of Rotational Freedom and One Degree of Translational Freedom	176
7-6. The Mobility Method	183
7-7. The Electromechanical Analogy	190
7-8. Mobility Diagram of a System with Two Degrees of Rotational Freedom and Two Degrees of Translational Freedom	190
7-9. Solution by the Mobility Method of a One-Body System with Two Degrees of Rotational Freedom and One Degree of Translational Freedom	192
<i>Chapter 8. Branched Systems</i>	199
8-1. Schematic Representation	199
8-2. The Reflection of Impedances	201
8-3. Mobility Diagram and Solution by Reflection of Impedances	204
8-4. Inclusion of Damping	210
8-5. Multibranched System	212
8-6. System Motion	217
8-7. Ratio of Motions as the Ratio of Impedances	221
<i>Chapter 9. Nonsinusoidal Inputs</i>	224
9-1. Introduction	224
9-2. Pulse Inputs	226
9-3. Single-Pulse Input	229
9-4. The Dirac Impulse Function	233
9-5. Repeated Pulses	234
<i>Chapter 10. Solution of the Frequency Equation</i>	237
10-1. Introduction	237
10-2. Conformal Mapping	239

## viii CONTENTS

10-3. The Zeros of the Characteristic Determinant	241
10-4. The Determination of the Zeros of $\Delta(s)$	241
<i>Chapter 11. Shock and Vibration Isolation by Feedback Control</i>	247
11-1. Feedback	247
11-2. System Algebra	249
11-3. Stability	249
11-4. Determination of Stability	251
11-5. Shock and Vibration Isolation by Force Feedback	256
11-6. Shock and Vibration Isolation of a Multiple-Degree-of-Freedom System	260
<i>Chapter 12. Lagrange's Equations of Motion: The Energy Method</i>	265
12-1. Hamilton's Principle	265
12-2. Lagrange's Equations for Conservative Systems	266
12-3. The Dissipation Function	268
12-4. Solution of a Single-Degree-of-Freedom System	268
12-5. Solution of the Simple Pendulum	271
12-6. The Compound Pendulum with Two Degrees of Freedom	273
12-7. Inertial Force as an Input	274
12-8. The Double Pendulum	276

## PART III. LINEAR SHOCK AND VIBRATION IN CONTINUOUS SYSTEMS

<i>Chapter 13. The Wave Equations for Autonomous Systems</i>	281
13-1. Introduction	281
13-2. The Vibrating String	281
13-3. Longitudinal Vibration in Elastic Continuous Systems	285
13-4. Torsional Vibration in Elastic Continuous Systems	287
13-5. Flexural Vibration of an Elastic Beam	288
13-6. Vibration of Autonomous Membranes	290
<i>Chapter 14. Solutions of the Wave Equations for Autonomous Systems; The Frequency Equation</i>	294
14-1. Introduction	294
14-2. The Vibrating String	294
14-3. Longitudinal Vibration	302

14-4. Torsional Vibration	308
14-5. Flexural Vibration	313
14-6. Vibration of Autonomous Membranes	318
14-7. The Circular Membrane	321
14-8. The Natural Frequencies	326
14-9. Approximation of the Fundamental Natural Frequency	327
<i>Chapter 15. Force and Motion Inputs</i>	331
15-1. The Wave Equations for Nonautonomous Systems	331
15-2. Motion Inputs	332
15-3. Viscous Damping	338
15-4. Force Inputs	344
15-5. Internal Boundaries	347
15-6. Flexural Shock and Vibration	349
15-7. Shock and Vibration of the Membrane	354
Selected References	357
Problems	359
Index	403
