Preface	v
1 <i>The Field Equations</i>	1
1.1 Introduction	1
1.2 Poisson and Laplace's Equation	2
1.3 The diffusion equation	6
1.4 The wave equation	8
1.5 Boundary conditions and uniqueness of solution	9
1.6 Orthogonality and the Sturm–Liouville equation	11
2 <i>Rectangular Cartesian Coordinate Systems</i>	14
2.1 Introduction	14
2.2 Wave equation for a uniform stretched string	15
2.3 Hybridization of the normal modes of vibration	18
2.4 The freely hanging chain	21
2.5 Lattice vibrations	24
2.6 Wave equation for a uniform two-dimensional membrane	31
2.7 The Schrödinger wave equation: solutions for which the potential is a constant	36
2.8 The linear harmonic oscillator	49
2.9 The periodic potential	56
2.10 The diffusion equation	67
Problems	74
3 <i>Orthogonal Curvilinear Coordinate Systems: Cylindrical Solutions</i>	80
3.1 Introduction	80
3.2 Wave equation for a uniform stretched circular membrane	88
3.3 Correlation between square, circular and elliptical modes	94
3.4 Fraunhofer diffraction at a circular aperture	97
3.5 Diffusion in an infinitely long cylinder	101
3.6 Propagation of an electromagnetic wave in a cylindrical conductor	103
3.7 Elliptic and hyperbolic coordinates	106
3.8 Hydrodynamic irrotational flow past an elliptical aerofoil	110
3.9 Potential distribution around an elliptic cylinder	114
3.10 Elliptic solutions of the Helmholtz equation	117
Problems	119

x	
4	<i>Orthogonal Curvilinear Coordinate Systems: Spherical Solutions</i> 122
4.1	Introduction 122
4.2	Uniformly moving sphere in an ideal fluid 132
4.3	Vibrational modes of a spherical droplet 135
4.4	Electrostatic multipolar fields 140
4.5	Normal interior modes of vibration of a rotating gaseous star 142
4.6	Partial wave analysis and elastic scattering 148
4.7	The hydrogen atom 163
4.8	Hydrogenic systems 171
4.9	Spherical harmonic oscillator 174
4.10	Quantization of the motion of a charged particle in a magnetic field 175
4.11	The liquid metal pseudopotential 178
4.12	Propagation of earth tremors at the Mohorovičić Layer 185
4.13	Interior temperature distribution for a rotating planet 190
4.14	Prolate and oblate spheroidal coordinates 194
	Problems 199
5	<i>Approximate Methods and Applications</i> 202
5.1	Introduction 202
5.2	Perturbation theory for non-degenerate states 203
5.3	Perturbation theory for degenerate states 206
5.4	The WBKJ approximation 208
5.5	The variational approximation 211
5.6	Quantum molecular physics: molecular orbital theory 218
5.7	Quantum molecular physics: valence bond theory 226
5.8	Hybridization 228
	Problems 233
 <i>Appendices</i>	
I	The Fourier transform 234
II	The Laplace transform 239
III	The Bessel function 242
IV	The Hermite polynomials 249
V	The Mathieu equation 253
VI	The Legendre function 258
VII	The Laguerre function 263
	Bibliography 269
	Index 273
