

Contents

Introduction.....	1
1. Symplectic Structures and Hamiltonian Systems.....	3
1.1 Strong and Weak Nondegenerate Forms.....	3
1.2 Symplectic Forms.....	4
1.3 Canonical Symplectic Forms.....	7
1.4 Symplectic Forms Induced by Metrics.....	9
1.5 Canonical Transformations.....	10
1.6 Hamiltonian Vector Fields.....	12
1.7 Poisson Brackets.....	15
2. Linear Hamiltonian Systems.....	16
2.1 Introduction and Motivation--the Wave Equation.....	16
2.2 Canonical Commutation Relations for the Fields.....	22
2.3 Linear Hamiltonian Systems.....	27
2.4 Poisson Brackets and Commutators.....	37
2.5 Symmetry Groups and Conservation Laws.....	38
2.6 Complex Linear Systems.....	40
2.7 Complex Structure for Real Linear Systems.....	42
2.8 Symmetric Hyperbolic Systems.....	47
2.9 Some Technical Remarks: Flows of Linear Vector Fields.....	51
3. Some General Properties of Nonlinear Semigroups.....	56
3.1 Flows and Semiflows.....	56
3.2 Separate and Joint Continuity.....	58
3.3 Boundedness of the Generator.....	62
3.4 Lipschitz Flows.....	64
3.5 Uniqueness of Integral Curves.....	66
3.6 The Generator of a Flow.....	69
4. Hamiltonian Systems.....	72
4.1 Flows and Lie Derivatives.....	72
4.2 Hamiltonian Vector Fields and Poisson Brackets.....	76
4.3 A General Conservation Theorem.....	79
4.4 Symplectic Mappings.....	83
4.5 Polynomial Systems.....	84
4.6 Systems in Interaction: An Example.....	86
4.7 A Nonlinear Version of Stone's Theorem.....	89
4.8 Some Global Existence Theorems.....	94

5. Lagrangian Systems.....	100
5.1 Lagrange's Equations.....	100
5.2 Motion in a Potential Field.....	106
5.3 Constrained Systems.....	109
5.4 Lagrangian Field Theories.....	110
5.5 Lagrangian Systems in Quantum Mechanics.....	114
6. Symmetry Groups and Conservation Laws.....	125
6.1 Lie Groups and Moments.....	126
6.2 A Conservation Theorem.....	132
6.3 Symmetry Groups on Tangent Bundles.....	137
6.4 The Conservation Theorem for Lagrangian Systems.....	140
6.5 Symmetry Groups on Vector Bundles.....	141
6.6 Conservation Laws for Nonlinear Wave Equations.....	147
6.7 Noether's Theorem and Local Conservation Laws.....	149
References.....	154
