

□ Contents □

1	Transport Equations	1
1.1	Particle Distribution Functions, 5	
1.2	Derivation of a Generic Form of the Transport Equation, 9	
1.3	A Brief Comparison of Various Particle Transport Theories, 20	
1.4	The Relationship Between Transport Theory and Kinetic Theory, 27	
1.5	Scope of Treatise, 38	
2	Exact Solutions for Simple, Modeled Theories of Particle Transport	44
2.1	Particle Streaming in the Absence of Scattering, 47	
2.2	One-Speed Transport Theory, 64	
2.3	Time-Dependent Problems in Transport Theory, 123	
2.4	Some Final Comments on the Methods for Solving the One-Speed Transport Equations, 129	
3	Collision Phenomena in Particle Transport	141
3.1	Linear Collision Operators, 144	
3.2	The Boltzmann Collision Term, 168	
3.3	The Fokker-Planck (Landau) Equation, 183	
3.4	Collisionless Transport with Self-Consistent Fields: The Vlasov Equation, 188	
3.5	Modern Developments in the Derivation of Transport Equations, 190	
4	The Derivation of Continuum Descriptions from Transport Equations	217
4.1	Some General Remarks, 217	
4.2	Diffusion Theory, 219	
4.3	The Equations of Hydrodynamics, 253	
4.4	Some Concluding Remarks, 273	

5	Basic Problems in Transport Theory	279
5.1	Asymptotic Relaxation Problems (Eigenvalue Problems), 280	
5.2	General Studies of Boundary Value Problems, 322	
5.3	Superthermal Particle Transport, 327	
6	Nonlinear Transport Processes	346
6.1	The Method of Moments, 349	
6.2	Integral Equation Methods, 357	
6.3	Quasilinear Theory of Plasma Dynamics, 359	
7	Approximate Methods in Transport Theory	366
7.1	Perturbation Methods, 366	
7.2	Variational Methods, 378	
7.3	Approximate Treatment of Particle Energy Dependence, 406	
8	Numerical Methods in Transport Theory	420
8.1	The Discrete Ordinates Method, 422	
8.2	Spherical Harmonics (P_N) Method, 474	
8.3	The Finite Element Method, 479	
8.4	Integral Transport Methods, 504	
8.5	Time-Dependent Transport, 522	
9	Computer Simulation of Particle Transport	533
9.1	Statistical Simulation (Monte Carlo) Methods, 533	
9.2	Deterministic Transport Simulation Methods, 567	
Appendix A	The Wiener-Hopf Method	575
Appendix B	Principal Value Integration and Cauchy Integrals	584
Appendix C	Singular Integral Equations of the Cauchy Type	590
Appendix D	A Short "Proof" of the Generalized Langevin Equation	595
Appendix E	A Child's Primer on the Spectral Theory of Operators	597
	Index	603
