I. Nonholonomic Dynamical Systems, Geometry of Distributions and Variational Problems

A.M. Vershik, V.Ya. Gershkovich

Translated from the Russian
by M.A. Semenov-Tian-Shansky

Contents

Introduction	4
Chapter 1. Geometry of Distributions	10
§ 1. Distributions and Related Objects	10
1.1. Distributions and Differential Systems	10
1.2. Frobenius Theorem and the Flag of a Distribution	12
1.3. Codistributions and Pfaffian Systems	14
1.4. Regular Distributions	16
1.5. Distributions Invariant with Respect to Group Actions and Some Canonical Examples	18
1.6. Connections as Distributions	21
1.7. A Classification of Left Invariant Contact Structures on Three-Dimensional Lie Groups	22
§ 2. Generic Distributions and Sets of Vector Fields, and Degeneracies of Small Codimension. Nilpotentization and Classification Problem	24
2.1. Generic Distributions	25
2.2. Normal Forms of Jets of Basic Vector Fields of a Generic Distribution	26
2.3. Degeneracies of Small Codimension	27
2.4. Generic Sets of Vector Fields	29
2.5. Small Codimension Degeneracies of Sets of Vector Fields	31
2.6. Projection Map Associated with a Distribution	32
2.7. Classification of Regular Distributions	33
2.8. Nilpotentization and Nilpotent Calculus	34

Chapter 2. Basic Theory of Nonholonomic Riemannian Manifolds	35
§ 1. General Nonholonomic Variational Problem and the Geodesic Flow on Nonholonomic Riemannian Manifolds	35
1.1. Rashevsky-Chow Theorem and Nonholonomic Riemannian Metrics (Carnot-Carathéodory Metrics)	35
1.2. Two-Point Problem and the Hopf-Rinow Theorem	36
1.3. The Cauchy Problem and the Nonholonomic Geodesic Flow	37
1.4. The Euler-Lagrange Equations in Invariant Form and in the Orthogonal Moving Frame and Nonholonomic Geodesics	38
1.5. The Standard Form of Equations of Nonholonomic Geodesics for Generic Distributions	40
1.6. Nonholonomic Exponential Mapping and the Wave Front	41
1.7. The Action Functional	42
§ 2. Estimates of the Accessibility Set	42
2.1. The Parallelotope Theorem	43
2.2. Polysystems and Finslerian Metrics	44
2.3. Theorem on the Leading Term	45
2.4. Estimates of Generic Nonholonomic Metrics on Compact Manifolds	47
2.5. Hausdorff Dimension of Nonholonomic Riemannian Manifolds	48
2.6. The Nonholonomic Ball in the Heisenberg Group as the Limit of Powers of a Riemannian Ball	49
Chapter 3. Nonholonomic Variational Problems on Three-Dimensional Lie Groups	51
§ 1. The Nonholonomic ε -Sphere and the Wave Front	51
1.1. Reduction of the Nonholonomic Geodesic Flow	51
1.2. Metric Tensors on Three-Dimensional Nonholonomic Lie Algebras	52
1.3. Structure Constants of Three-Dimensional Nonholonomic Lie Algebras	53
1.4. Normal Forms of Equations of Nonholonomic Geodesics on Three-Dimensional Lie Groups	53
1.5. The Flow on the Base $V + V^\perp$ of the Semidirect Product	55
1.6. Wave Front of Nonholonomic Geodesic Flow, Nonholonomic ε -Sphere and their Singularities	55
1.7. Metric Structure of the Sphere S_ε^V	58
§ 2. Nonholonomic Geodesic Flow on Three-Dimensional Lie Groups	61
2.1. The Monodromy Maps	61
2.2. Nonholonomic Geodesic Flow on $SO(3)$	63
2.3. NG-Flow on Compact Homogeneous Spaces of the Heisenberg Group	65
2.4. Nonholonomic Geodesic Flows on Compact Homogeneous Spaces of $SL_2 \mathbb{R}$	67

2.5. Nonholonomic Geodesic Flow on Some Special Multidimensional Nilmanifolds	70
References	73
Additional Bibliographical Notes	79

II. Integrable Systems II

Contents

Introduction	86
Chapter 1. Integrable Systems and Finite-Dimensional Lie Algebras (M.A. Olshanetsky, A.M. Perelomov)	87
§ 1. Hamiltonian Systems on Coadjoint Orbits of Lie Groups	87
§ 2. The Moment Map	89
§ 3. The Projection Method	91
§ 4. Description of the Calogero-Sutherland Type Systems	95
§ 5. The Toda Lattice	97
§ 6. Lax Representation. Proof of Complete Integrability	100
§ 7. Explicit Integration of the Equations of Motion	105
A) Systems of Calogero Type	105
B) Systems of Sutherland Type	107
C) Systems with Two Types of Particles	110
D) The Nonperiodic Toda Lattice	111
§ 8. Bibliographical Notes	114
References	114
Chapter 2. Group-Theoretical Methods in the Theory of Finite-Dimensional Integrable Systems (A.G. Reyman, M.A. Semenov-Tian-Shansky)	116
Introduction	116
§ 1. Poisson Manifolds	118
§ 2. The <i>R</i> -Matrix Method and the Main Theorem	120
2.1. The Involutivity Theorem	120
2.2. Factorization Theorem	121
2.3. Classical Yang-Baxter Identity and the General Theory of Classical <i>R</i> -Matrices	123
2.4. Examples	125
2.5. Bibliographical Notes	126
§ 3. Gradings and Orbits. Toda Lattices	126
3.1. Graded Algebras	126
3.2. First Examples: Toda Lattices	128

3.3. Solutions and Scattering for Toda Lattices	131
3.4. Bibliographical Notes	133
§ 4. Affine Lie Algebras and Lax Equations with a Spectral Parameter	133
4.1. Construction of Loop Algebras	133
4.2. Hierarchies of Poisson Structures for Lax Equations with a Spectral Parameter	135
4.3. Structure Theory of Affine Lie Algebras	137
4.4. Periodic Toda Lattices	141
4.5. Multi-pole Lax Equations	143
4.6. Bibliographical Notes	146
§ 5. Hamiltonian Reduction and Orbits of Semi-direct Products	147
5.1. Hamiltonian Reduction	147
5.2. Examples. Magnetic Cotangent Bundles	149
5.3. Orbits of Semi-direct Products	151
5.4. Nonabelian Toda Lattices	153
5.5. Bibliographical Notes	154
§ 6. Lax Representations of Multi-dimensional Tops	155
6.1. Kinematics of the n -dimensional Rigid Body	155
6.2. Integrable Top-Like Systems	156
6.3. Bibliographical Notes	160
§ 7. Integrable Multi-dimensional Tops and Related Systems	161
7.1. $(G, K) = (\mathrm{GL}(n, \mathbb{R}), \mathrm{SO}(n))$: Multidimensional Tops in Quadratic Potentials. The Neumann System. Multidimensional Rigid Body in Ideal Fluid: The Clebsch Case	162
7.2. $(G, K) = (\mathrm{SO}(p, q), \mathrm{SO}(p) \times \mathrm{SO}(q))$: Interacting Tops and Kowalewski Tops. p -dimensional Top Interacting with a Rotator. p -dimensional Lagrange's Heavy Top. Generalized Kowalewski Tops. Three-dimensional Tops Associated with the Lie Algebras $\mathfrak{so}(4, 4)$ and $\mathfrak{so}(4, 3)$	164
7.3. The Lie Algebra G_2 : an Exotic $\mathrm{SO}(4)$ -Top	171
7.4. The Anharmonic Oscillator, the Garnier System and Integrable Quartic Potentials	172
7.5. Bibliographical Notes	174
§ 8. The Riemann Problem and Linearization of Lax Equations	175
8.1. The Riemann Problem	175
8.2. Spectral Data and Dynamics	176
8.3. Reconstruction of $L(\lambda)$ from the Spectral Data	177
8.4. Bibliographical Notes	179
§ 9. Completeness of the Integrals of Motion	180
9.1. The Case of $\mathcal{L}(\mathrm{gl}(n, \mathbb{C}))$	180
9.2. Complete Integrability for Other Lie Algebras	181
9.3. Bibliographical Notes	182
§ 10. The Baker-Akhiezer Functions	182
10.1. Solution of the Matrix Riemann Problem	182

10.2. Explicit Formulae for the Baker-Akhiezer Functions	184
10.3. Example: Algebraic Geometry of the Kowalewski Top	186
10.4. Bibliographical Notes	188
§ 11. Equations with an Elliptic Spectral Parameter	188
11.1. Elliptic Decomposition	189
11.2. Lax Equations with an Elliptic Parameter	190
11.3. Multi-pole Lax Equations	191
11.4. Riemann Problem, Cousin Problem and Spectral Data	192
11.5. Real Forms and Reduction	193
11.6. Examples	194
11.7. Hierarchies of Poisson Brackets	197
11.8. Bibliographical Notes	197
§ 12. Classical R -Matrices, Poisson Lie Groups and Difference Lax Equations	197
12.1. Poisson Lie Groups	198
12.2. Duality Theory for Poisson Lie Groups	202
12.3. Poisson Reduction, Dressing Transformations and Symplectic Leaves of Poisson Lie Groups	203
12.4. Lax Equations on Lie Groups	206
12.5. Poisson Structure on Loop Groups and Applications	212
12.6. Additional Comments	218
12.7. Bibliographical Notes	219
References	220

Chapter 3. Quantization of Open Toda Lattices

(M.A. Semenov-Tian-Shansky)	226
Introduction	226
§ 1. Reduction of Quantum Bundles	227
1.1. Lagrangian Polarizations	227
1.2. Reduction of Quantum Bundles	228
1.3. The Quantum Version of Kostant's Commutativity Theorem ..	231
1.4. The Generalized Kostant Theorem and Reduction of Quantum Bundles	232
1.5. Quantization. The Duflo Homomorphism	233
§ 2. Quantum Toda Lattices	234
2.1. Semisimple Lie Groups and Lie Algebras. Notation	234
2.2. Toda Lattices: a Geometric Description	235
2.3. Toda Lattices: Geometric Quantization	237
§ 3. Spectral Theory of the Quantum Toda Lattice	238
3.1. Representations of the Principal Series and Whittaker Functions	238
3.2. Analytic Properties of the Whittaker Functions	240
3.3. The Spectral Decomposition Theorem	241

3.4. Degenerate Toda Lattices	242
3.5. The Wave Packets and their Properties	245
3.6. Scattering Theory	249
3.7. Sketch of a Proof of the Main Theorem	250
3.8. Induction Over Rank	253
Bibliographical Notes	257
References	258

III. Geometric and Algebraic Mechanisms of the Integrability of Hamiltonian Systems on Homogeneous Spaces and Lie Algebras

V.V. Trofimov, A.T. Fomenko

Translated from the Russian
by A.G. Reyman

Contents

Chapter 1. Geometry and Topology of Hamiltonian Systems	263
§ 1. Symplectic Geometry	263
1.1. Symplectic Manifolds	263
1.2. Embeddings of Symplectic Manifolds	264
1.3. Symplectic Geometry of the Coadjoint Representation	265
1.4. Poisson Structures on Lie Algebras	266
1.5. Euler Equations	267
1.6. Euler Equations Arising in Problems of Mathematical Physics ..	268
§ 2. Some Classical Mechanisms of Integrability	270
2.1. The Hamilton-Jacobi Equation	270
2.2. Integration of the Equations of Motion According to Liouville and Stäckel	271
2.3. Lie's Theorem	272
2.4. Liouville's Theorem	272
§ 3. Non-commutative Integration According to Liouville	274
3.1. Non-commutative Lie Algebras of Integrals	274
3.2. Non-commutative Liouville Theorem	275
3.3. Interrelationships of Systems with Commutative and Non-commutative Symmetries	275
3.4. Local Equivalence of Commutative and Non-commutative Integration	277
§ 4. The Geometry of the Moment Map	278
4.1. The Moment Map	278
4.2. Convexity Properties of the Moment Map	279
4.3. Multiplicity-free Representations	280

§ 5. The Topology of Surfaces of Constant Energy in Completely Integrable Hamiltonian Systems	281
5.1. The Multi-dimensional Case. Classification of Surgery of Liouville Tori	281
5.2. The Four-dimensional Case	286
5.3. The Case of Four-dimensional Rigid Body	299
 Chapter 2. The Algebra of Hamiltonian Systems	 303
§ 1. Representations of Lie Groups and Dynamical Systems	303
1.1. Symplectic Structures Associated with Representations	303
1.2. Sectional Operators	304
1.3. Integrals of Euler Equations. Shift of the Argument	306
1.4. Sectional Operators for Symmetric Spaces	307
1.5. Complex Semisimple Series of Sectional Operators	307
1.6. Compact and Normal Series of Sectional Operators	308
1.7. Sectional Operators for the Lie Algebra of the Group of Euclidean Motions	309
1.8. Sectional Operators for the Lie Algebra $\Omega(g)$	309
1.9. Bi-Hamiltonian Properties of Euler Equations on Semisimple Lie Algebras	310
§ 2. Methods of Constructing Functions in Involution	310
2.1. Inductive Construction of Integrable Dynamical Systems on Coadjoint Orbits (Chains of Subalgebras)	310
2.2. Representations of Lie Groups and Involutive Families of Functions	311
2.3. Involutive Families of Functions on Semidirect Sums	313
2.4. The Method of Tensor Extensions of Lie Algebras	314
§ 3. Completely Integrable Euler Equations on Lie Algebras	317
3.1. Euler Equations on Semisimple Lie Algebras	317
3.2. Euler Equations on Solvable Lie Algebras	318
3.3. Euler Equations on Non-solvable Lie Algebras with a Non-trivial Radical	318
3.4. Integrable Systems and Symmetric Spaces	319
3.5. Theorem on the Completeness of Shifted Invariants	321
 Appendix	 322
References	328
